

# Shared brain areas underlying imagined and perceived self-motion

Cognitive and Motor Functions of the Vestibular System Workshop

Aix-Marseille Université, Marseille

5-6th July 2018

Gianluca Macauda

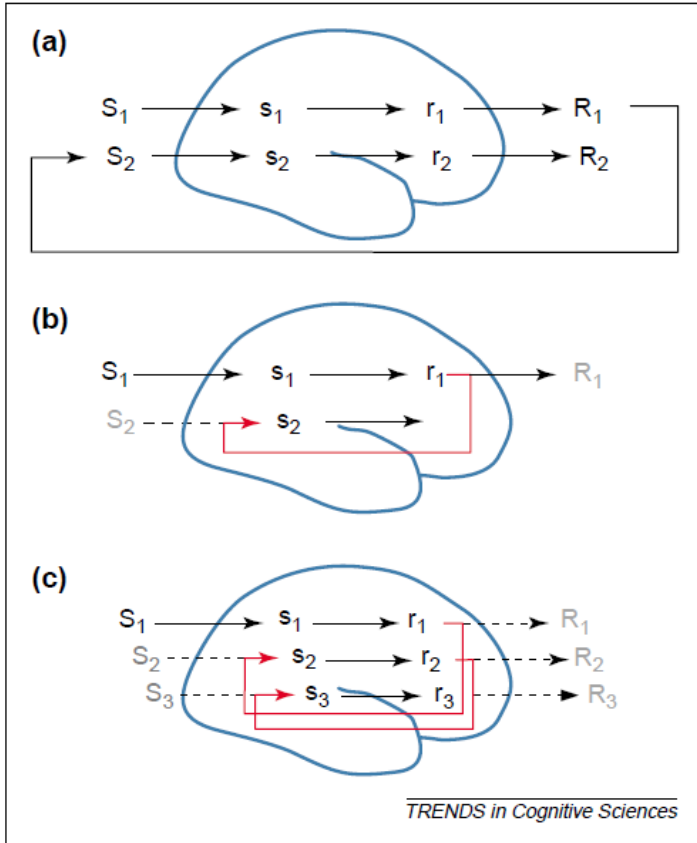

Department of Psychology, University of Bern

# Mental changes of self location

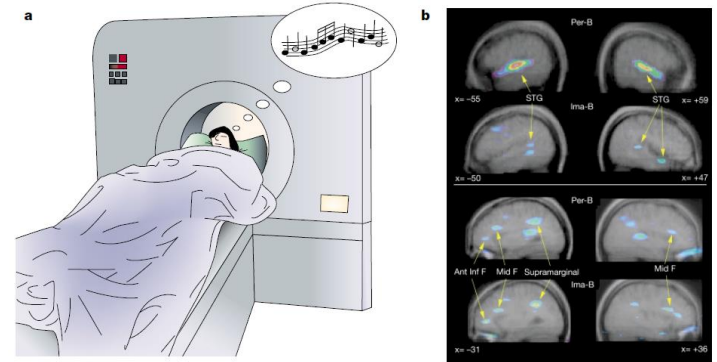

# Mental Simulations & Neural Correlates

## Idea

Hesslow, 2002

## Neural Level

Kosslyn et al., 2001

### Motor Imagery

### Movement Execution

Hardwick et al., 2017, bioRxiv

# Vestibular imagery?

## Vestibular Recall & Imagery

### No vestibular areas involved in recall

In contrast to the galvanic vestibular control experiment, we did not detect activations in the parietal operculum, the posterior insula (PINC) or the superior temporal gyri. Other essential gateways within the cortical vestibular network like the hippocampus or the dorsolateral thalamus were also unresponsive during our vestibular recall task (Dieterich et al. 2005; Smith et al. 2010). All of which are well-known

### Very difficult

cause the rating (Logie et al. 2011). Hence, we feel that the high degrees of difficulty in recalling a vestibular sensation and the missing activation of core regions within the vestibular network during the recall task suggest a hindered voluntary access to cortical vestibular areas.

# Why is this relevant?

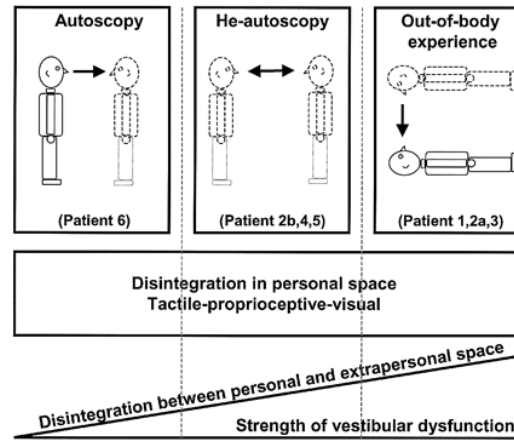

Falling (2.5-3.0 mA)

OBE (3.5 mA)

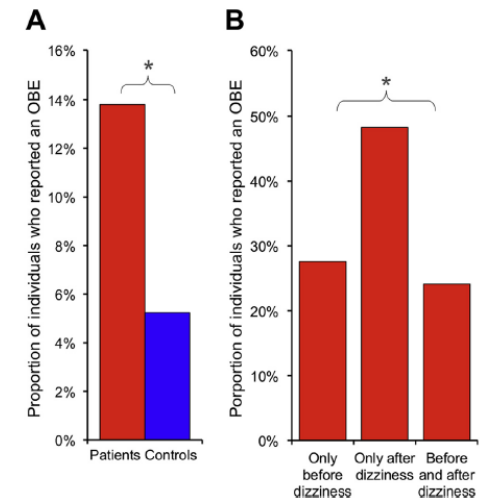

Blanke et al., 2002

## Phenomenology and pathophysiology of autoscopic phenomena

Blanke et al. 2004

## OBE in vestibular disorders

Lopez & Elzière, 2017

# Mental self-rotation & Vestibular processing

Idea: Areas involved in self-motion are also involved in simulated self-motion

Microgravity

Grabherr et al. 2007

GVS

Lenggenhager et al. 2008

Dilda et al., 2011

CVS

Falconer & Mast, 2012

Passive self-motion

Van Elk & Blanke, 2014

Deroualle et al., 2015

→ Mental body transformations  
(simulated change in self-location)

Inconclusive results: Conflicting stimulations, Individual strategies

# Galvanic Vestibular Stimulation and Mental Rotation

Which cortical areas are involved in vestibular processing and simulated self-location changes?

## Mental Rotations

Tomasino et al., 2016

## Area OP2

Eickhoff et al., 2006

## GVS: Method & neural correlates

### B galvanic vestibular stimulation (GVS)

Lopez et al., 2012

Smith et al., 2012

# Current study: Two aims

---

## 1. Cortical overlap of *simulated* and *perceived* self-motion

- Simulated = egocentric mental rotation
- Perceived = GVS

## 2. Behavioral effects of GVS on simulated self-motion

# Mental Rotation & Vestibular Stimulation

Egocentric Rotation

Left

Object Rotation

Right

No Rotation

Right

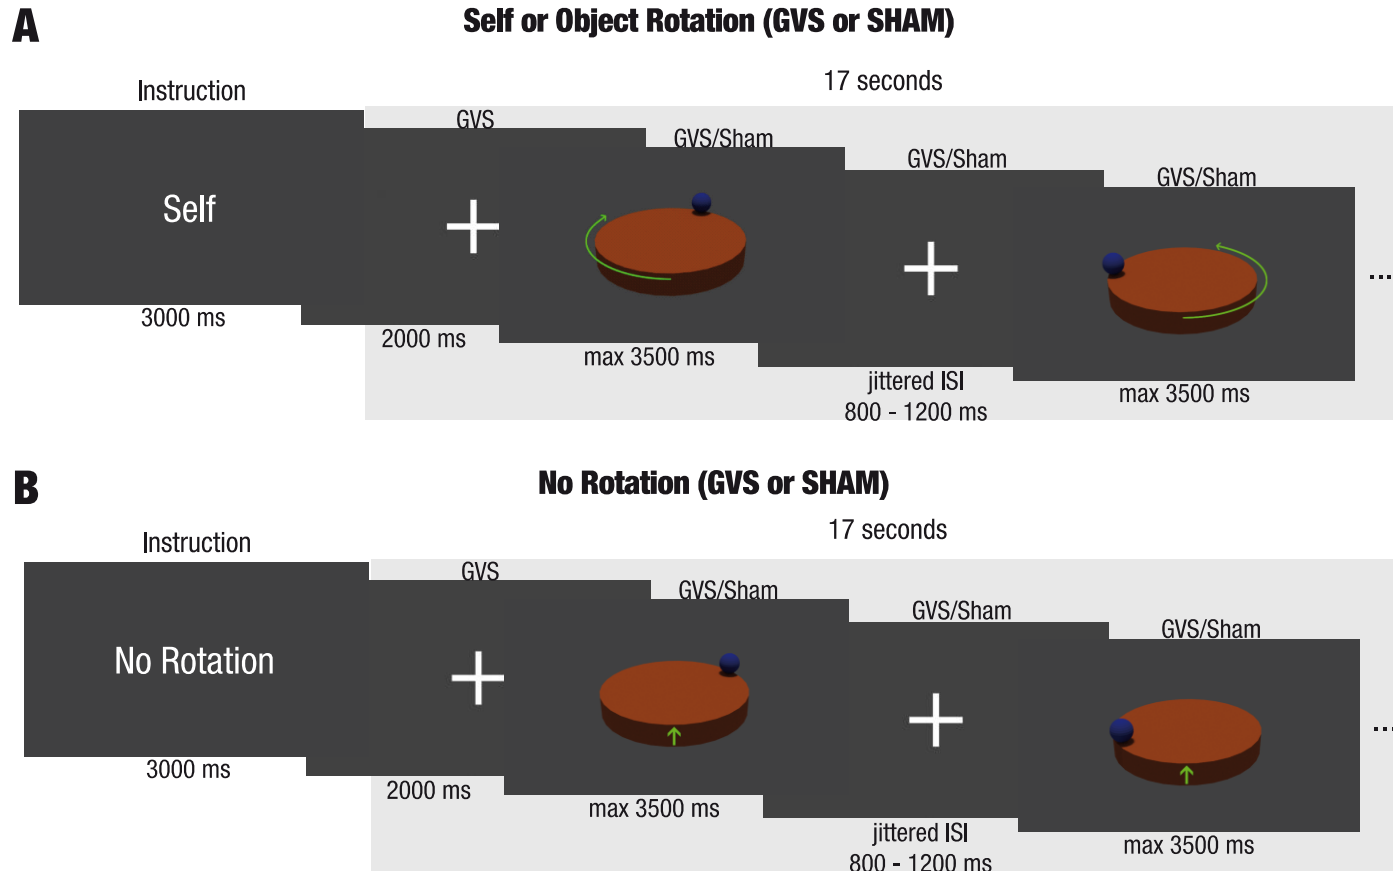

Keehner et al., 2006

GVS Signal

Sensation

3 (Egocentric, Object, No Rotation) x 2 (GVS, Sham) Design

# Main effect of GVS

GVS vs Sham over all rotation tasks

pFWE < 0.05

# Conjunction analysis: Area OP2 I

## Area OP2

## Vestibular processing & egocentric mental rotation

### A) Conjunction egocentric rotation & vestibular processing in OP2

### B) Mean parameter estimates from conjunction in OP2

# Current study: Two aims

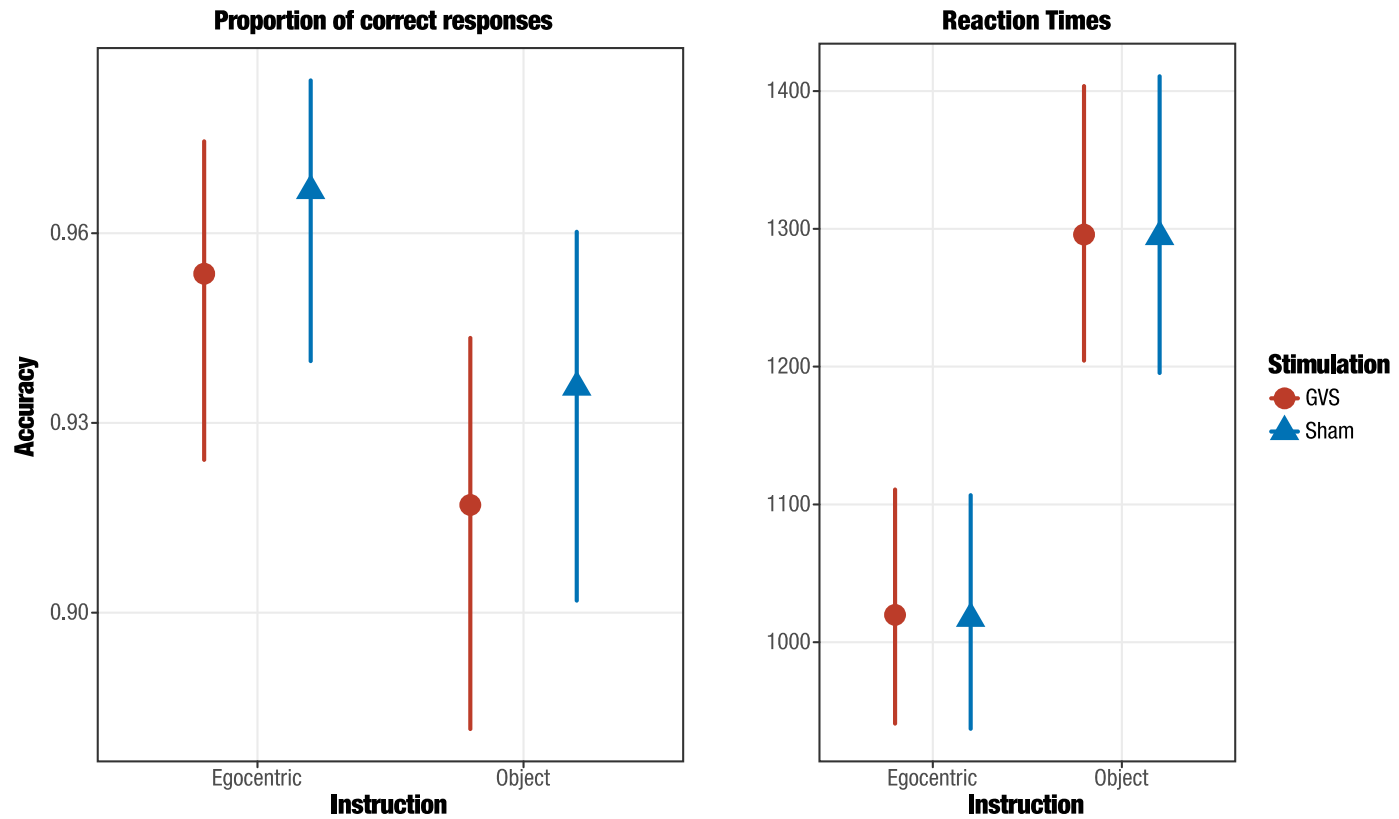

---

## 1. Cortical overlap of *simulated* and *perceived* self-motion

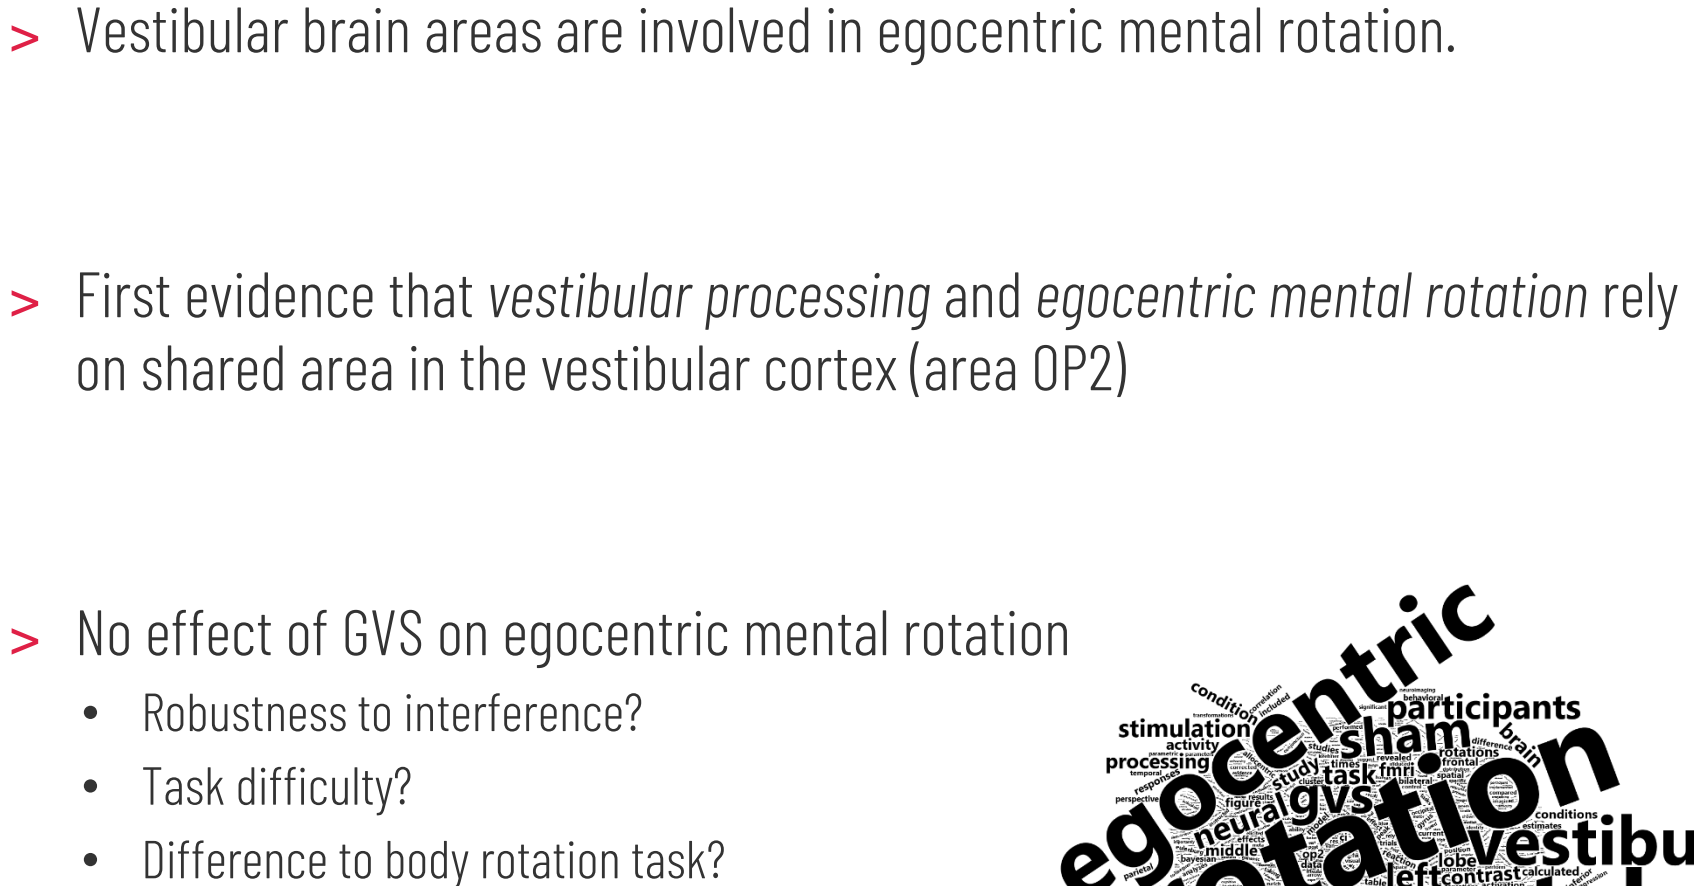

- Simulated = egocentric mental rotation
- Perceived = GVS

## 2. Behavioral effects of GVS on simulated self-motion

# Accuracy & Reaction Times

## Conclusion

# Acknowledgment
