### EGU 2020

#### G2.1 The Global Geodetic Observing System

# Contents

---

- Introduction to COST-G
- Products of COST-G
  - Combined GRACE gravity fields
  - Combined Swarm gravity fields
- Components of COST-G
- COST-G workflow, exemplified by a prototype GRACE-FO combination:
  - Quality control (Noise/Signal content)
  - Combination applying variance component estimation
- External validation (COST-G GRACE RL01)

# Introduction

## Gravity and geoid metadata

Online applications for the creation of metadata for gravity and geoid data. Service for searching the metadata database.

**g-meta**  
the gravity metadata editor  
(v0.2.6 - beta edition)

**N-meta**  
the geoid metadata editor  
(v0.1.3 - alpha edition)

## Gravity data

Land, marine, airborne gravity data as point and gridded values. Absolute and relative gravity data, WGM

## Geoid

Geoid models and geoid determination software, geoid modeling processing methodologies

## IGFS Mailing Lists

Subscribe to our mailing lists to be informed on IGFS Products & Stan

## SG and Earth tide data

Temporal variations of the Earth gravity field through long-term records from ground gravimeters, SG data, Earth tide data.

## Global Earth Models

Collection and archive of all existing global gravity field models, web interface for access to GEMs, model visualization and service.

## Time-variable GEMs

Combined gravity field solutions in SH coefficients and spatial grids for hydrological, oceanic and polar ice sheets applications.

## DEM data

Digital Elevation Models, relevant software for DEM creation, assessment, manipulation and display, global relief and crustal models and spherical harmonic data sets.

COST-G is a product center of the

Combination Service for Time-variable Gravity Fields

[Home](#)[Introduction](#)[Consortium](#)[Service](#)[Products](#)[Documents](#)[Contact](#)[The COST-G Plotter](#)

## Welcome to COST-G

The International **C**ombination **S**ervice for **T**ime-variable **G**ravity Fields (**COST-G**) is a product center of the [International Gravity Field Service \(IGFS\)](#) and is dedicated to the combination of monthly global gravity field models. COST-G steems from the activities of the former H2020 project [European Gravity Service for Improved Emergency Management \(EGSIEM\)](#).

Please use the top menu to visit the various parts of our website!

The service started its work in 2019 and the website is still under construction. More features will be available soon! We apologize for any inconvenience. For any questions, please [contact us](#).

Best regards,  
Your COST-G Team.

### Latest News

March 18th 2020

COST-G standards and RL01 release notes are now available [here](#)!

January 19th 2020

COST-G had its second ISSI team meeting in Bern, January 13-17. The Terms of References are [available here](#).

July 14th 2019

COST-G is officially launching at the occasion of the IUGG 2019 in Montreal!

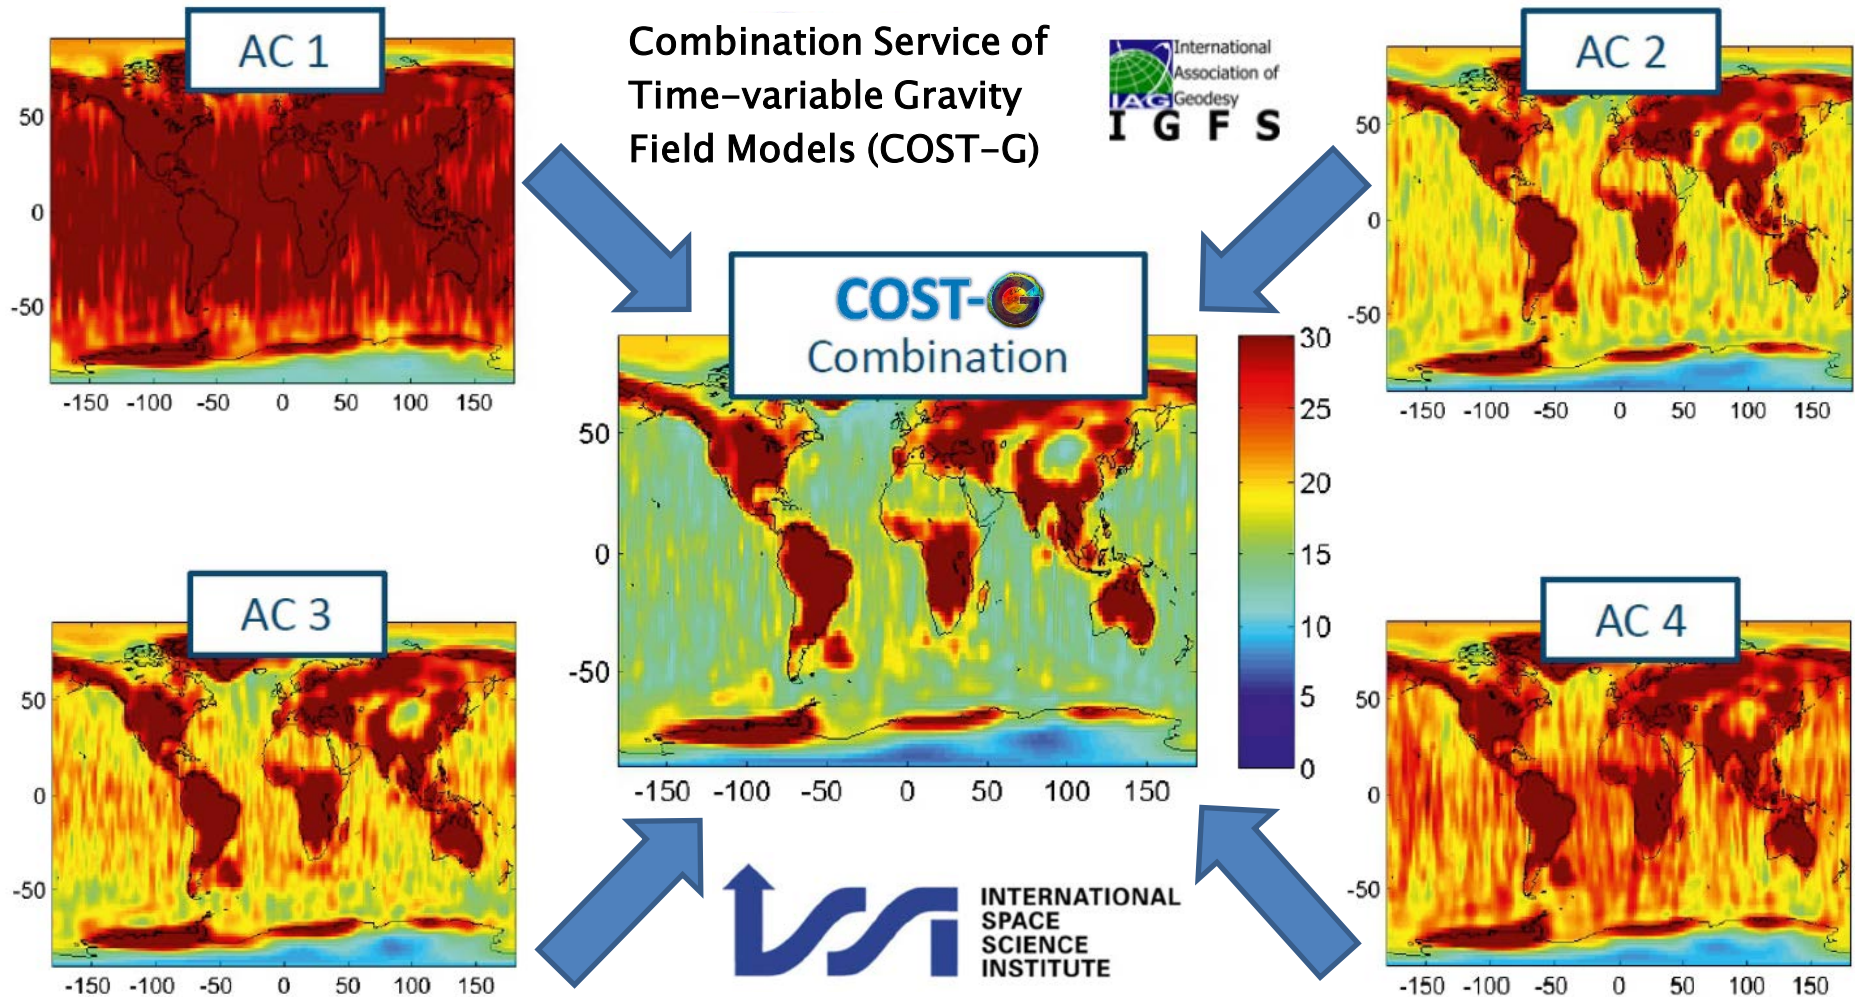

# COST-G and the H2020 G3P-project

COST-G is further developed within the frame of the Horizon 2020 project: G3P - Global Gravity - based Groundwater Product

# Products: Combined GRACE/GRACE-FO Gravity Fields

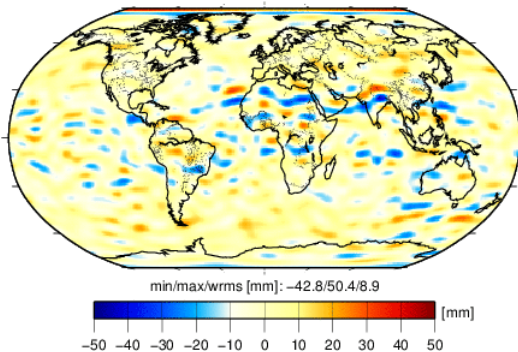

Improved and consolidated product integrating the strengths of all ACs

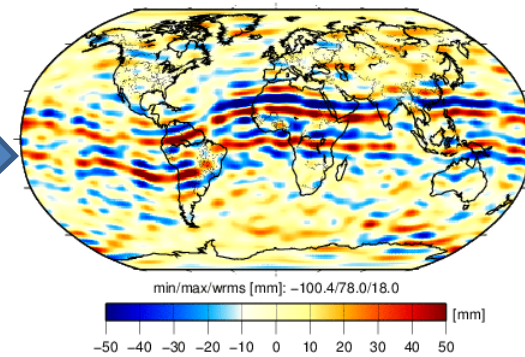

# Products: Combined Swarm Gravity Fields

GSWARM\_GF\_SABC\_AIUB\_2015-03\_01\_AIUB

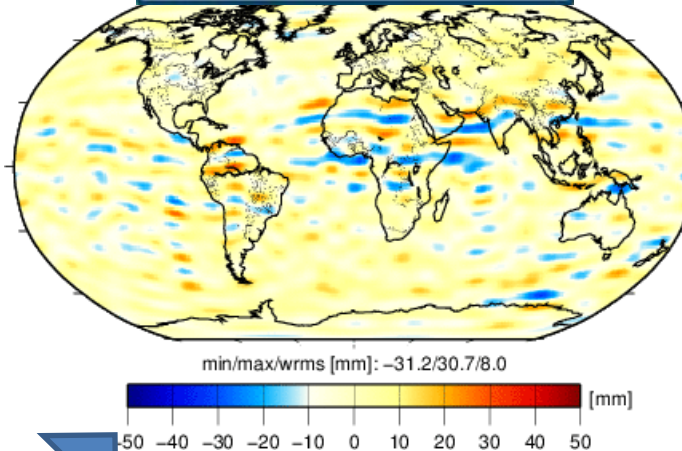

GSWARM\_GF\_SABC\_ASU\_2015-03\_01\_TUD

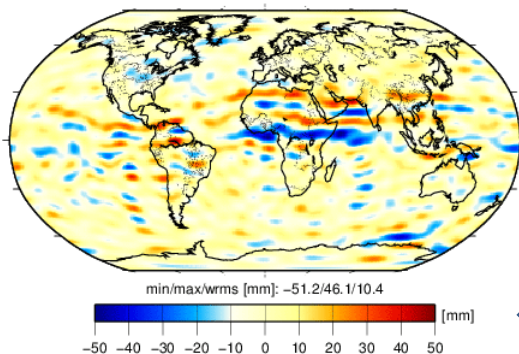

Combination Service of  
Time-variable Gravity  
Field Solutions (COST-G)

**COST-G**  
Combination

GSWARM\_GF\_SABC\_IFG\_2015-03\_03\_IFG

For Swarm

- Operational continuation is already running
- Will be funded by Swarm/DISC for two more years

funded by contract SD-ITT-1.1,  
part of contract 000109587/13/I-NB

EGU 2020

G2.1: Global Geodetic Observing System

# Permanent Components of COST-G

---

COST-G accomplishes its objectives through the following permanent components and roles:

- **Central Bureau (CB) & Analysis Center Coordinator (ACC)**
  - AIUB
- **Analysis Centers (ACs)**
  - AIUB, CNES, GFZ, TUG
- **Candidate ACs:** LUH, Chinese ACs
- **Level-3 Center (L3C)**
  - GFZ
- **Validation Centers (VCs)**
  - GRGS, GFZ
- **Product Evaluation Group (PEG)**
  - A. Eicker, A. Groh, B. Meyssignac

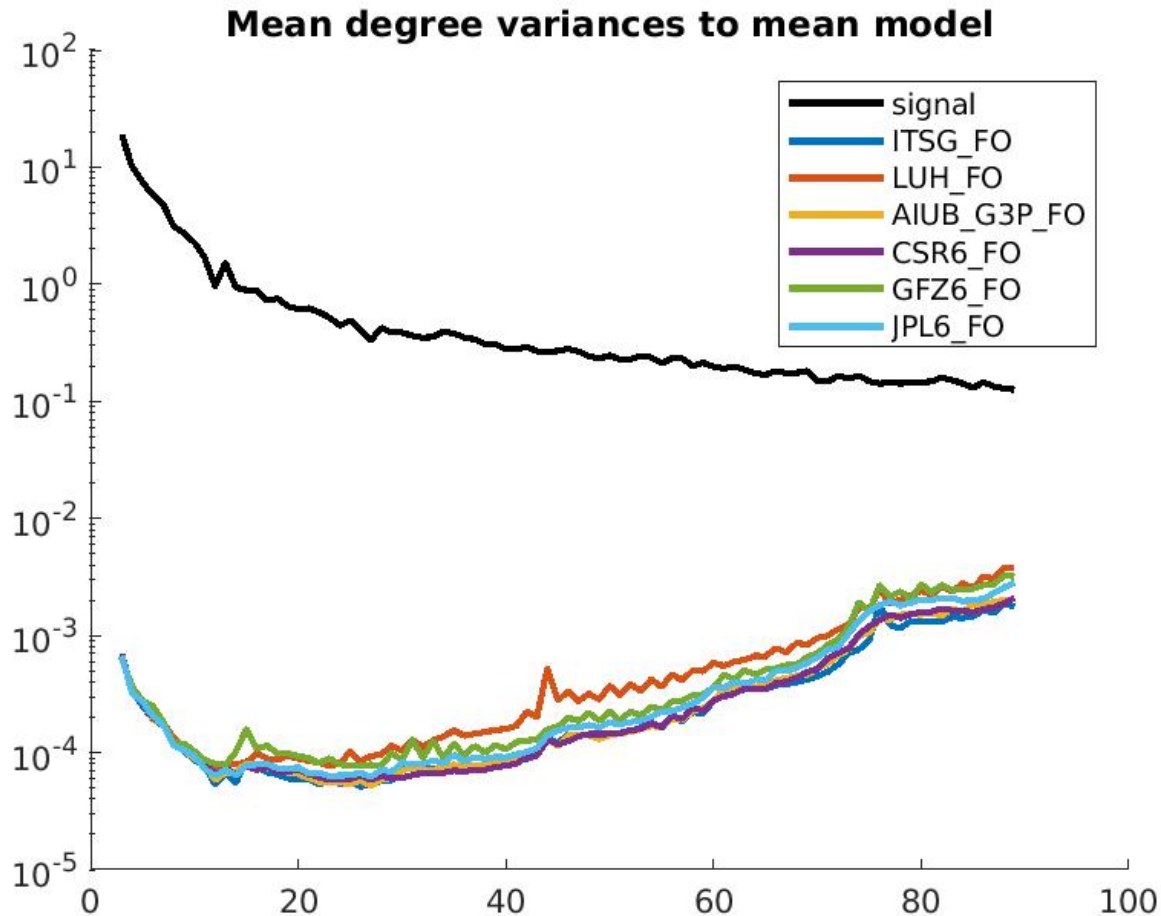

GRACE/GRACE-FO  
SDS (CSR, JPL)  
contribute as  
partner ACs to  
COST-G  
combinations.

# COST-G Workflow

# Quality Control – Noise Levels (spectral domain)

## GRACE-FO time-series:

### COST-G ACs:

- AIUB
  - continuation of RL02
  - G3P project
- GFZ
- GRGS (delayed)
- ITSG

### COST-G candidate AC:

- LUH

### COST-G partner ACs:

- CSR-RL06
- JPL-RL06

**Degree-wise comparison of spherical harmonic coefficients to a deterministic signal model derived from the monthly means of all time-series (GRACE-FO).**

# Quality Control – Noise Levels (spectral domain)

## GRACE-FO time-series:

### COST-G ACs:

- AIUB
  - continuation of RL02
  - G3P project

### GFZ

### •

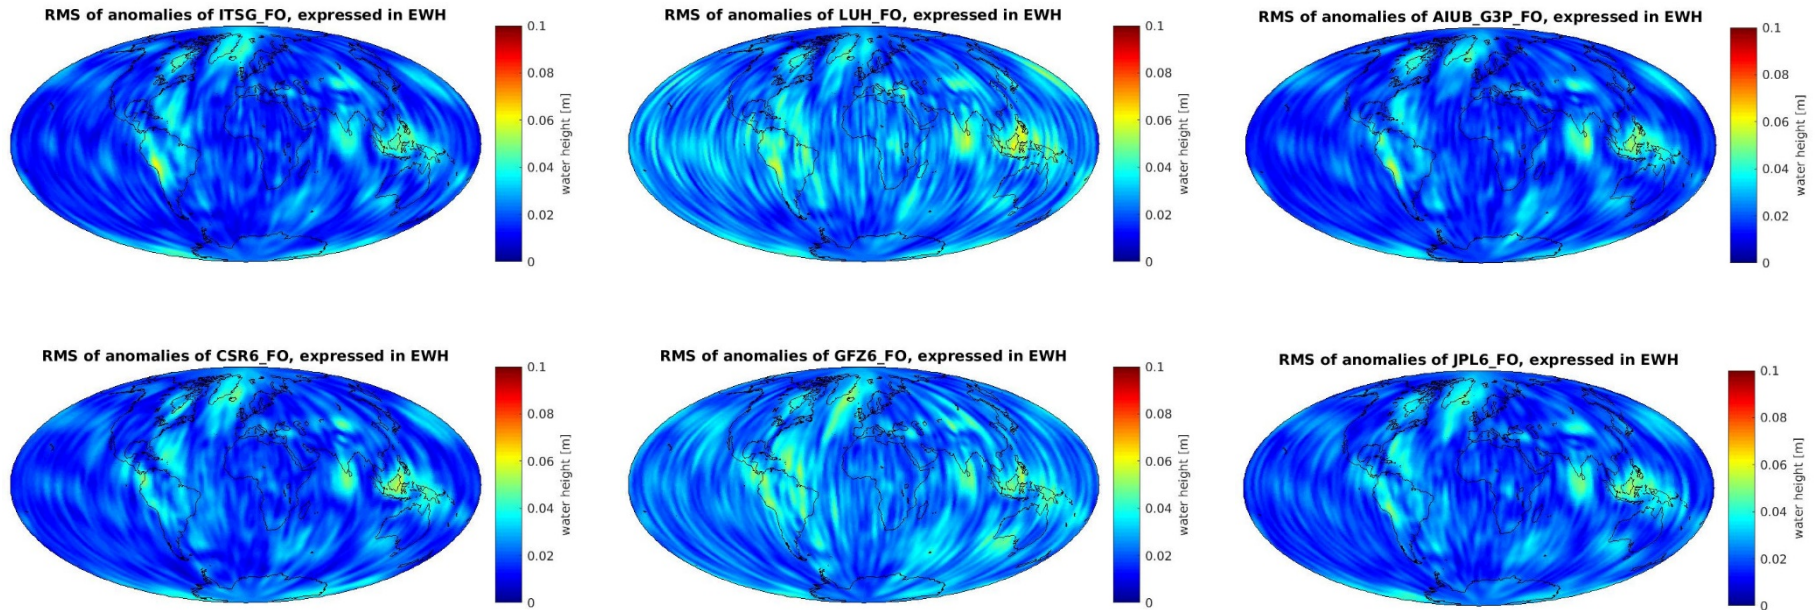

If not labeled differently, the AIUB time-series derived from alternative ACC transplant products in the frame of the G3P project is shown.

### •

Degree-wise comparison of spherical harmonic coefficients to a deterministic signal model derived from the monthly means of all time-series (GRACE-FO).

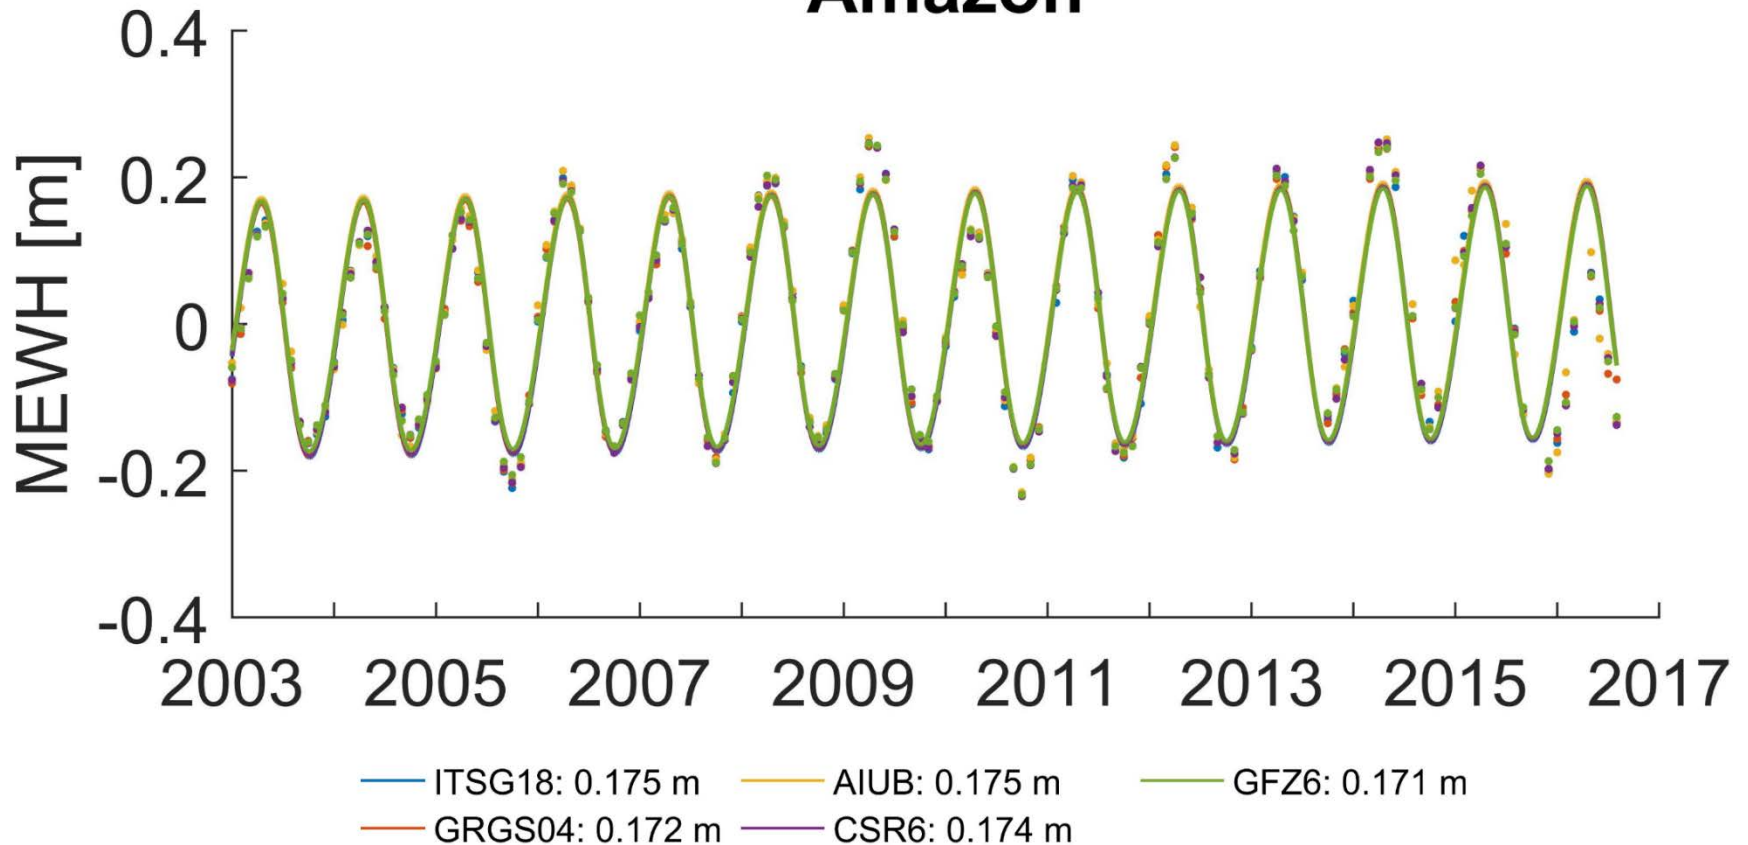

# Quality Control – Noise Levels (spatial domain)

Comparison of monthly grids to a deterministic signal model derived from the monthly means of all time-series (GRACE-FO). Shown are the RMS-values per grid cell over a common subset of monthly solutions per time-series.

# Quality Control – Signal Content (Hydrology)

## Amazon

Example: amplitude of seasonal variations in Amazon river basin (GRACE).

# Quality Control – Signal Content (Hydrology)

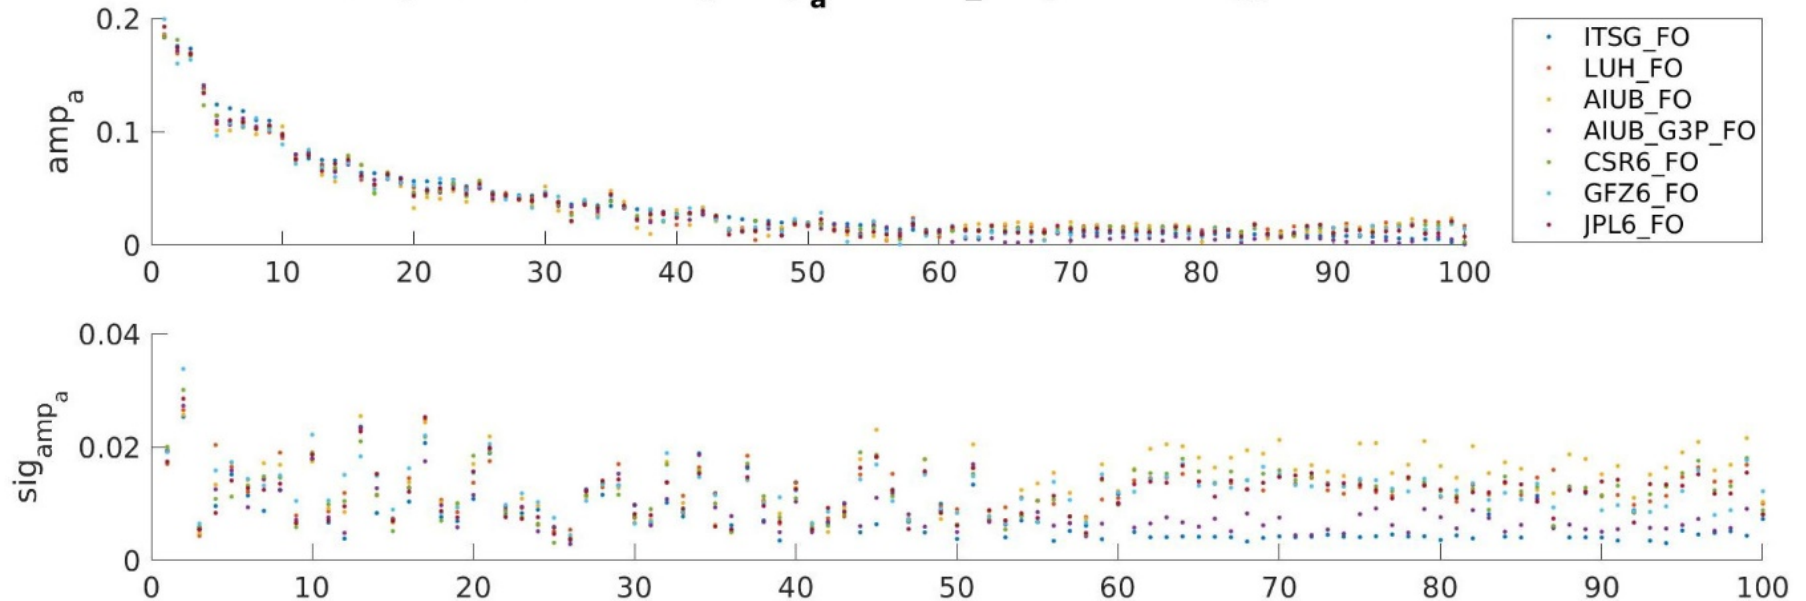

Example: amplitude of seasonal variations in Amazon river basin (GRACE-FO).

# Quality Control – Signal Content (Hydrology)

Amplitudes sorted by  $\text{amp}_a$  of ITSG\_FO (descending)

Comparison of amplitudes  $\text{amp}_a$  of seasonal mass variations and their formal errors  $\text{sig}_{\text{amp}}$  in 100 major river basins.

# Quality Control – Signal Content (Ice Mass Loss)

**Example: ice mass loss in Greenland (GRACE),  
compared to static reference field GOCO05S.**

# Quality Control – Signal Content (Ice Mass Loss)

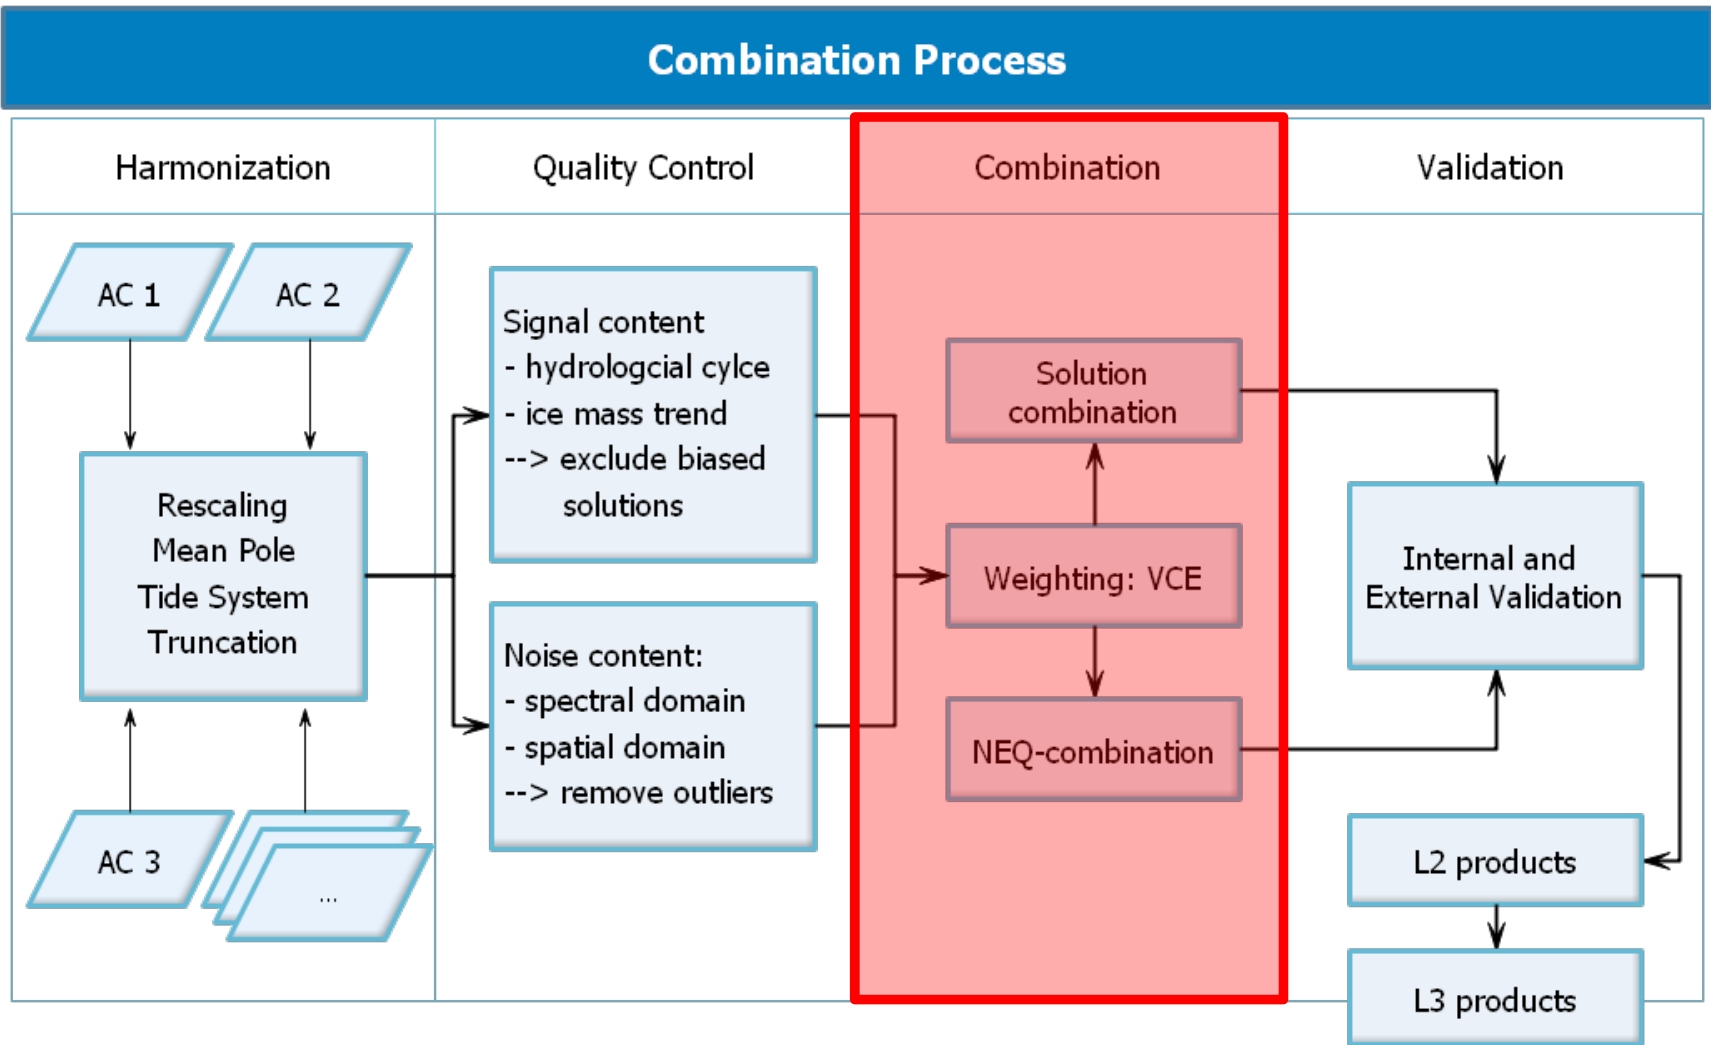

Example: ice mass loss in Greenland (GRACE-FO) with respect to GOCO05S.

Despite the short time span of the GRACE-FO time-series the mass loss trends in Greenland agree well, no signal attenuation in any of the time-series could be detected.

# COST-G – Combination

# Combination applying Variance Component Estimation

VCE-derived weights (normalized):

Noise over the oceans:

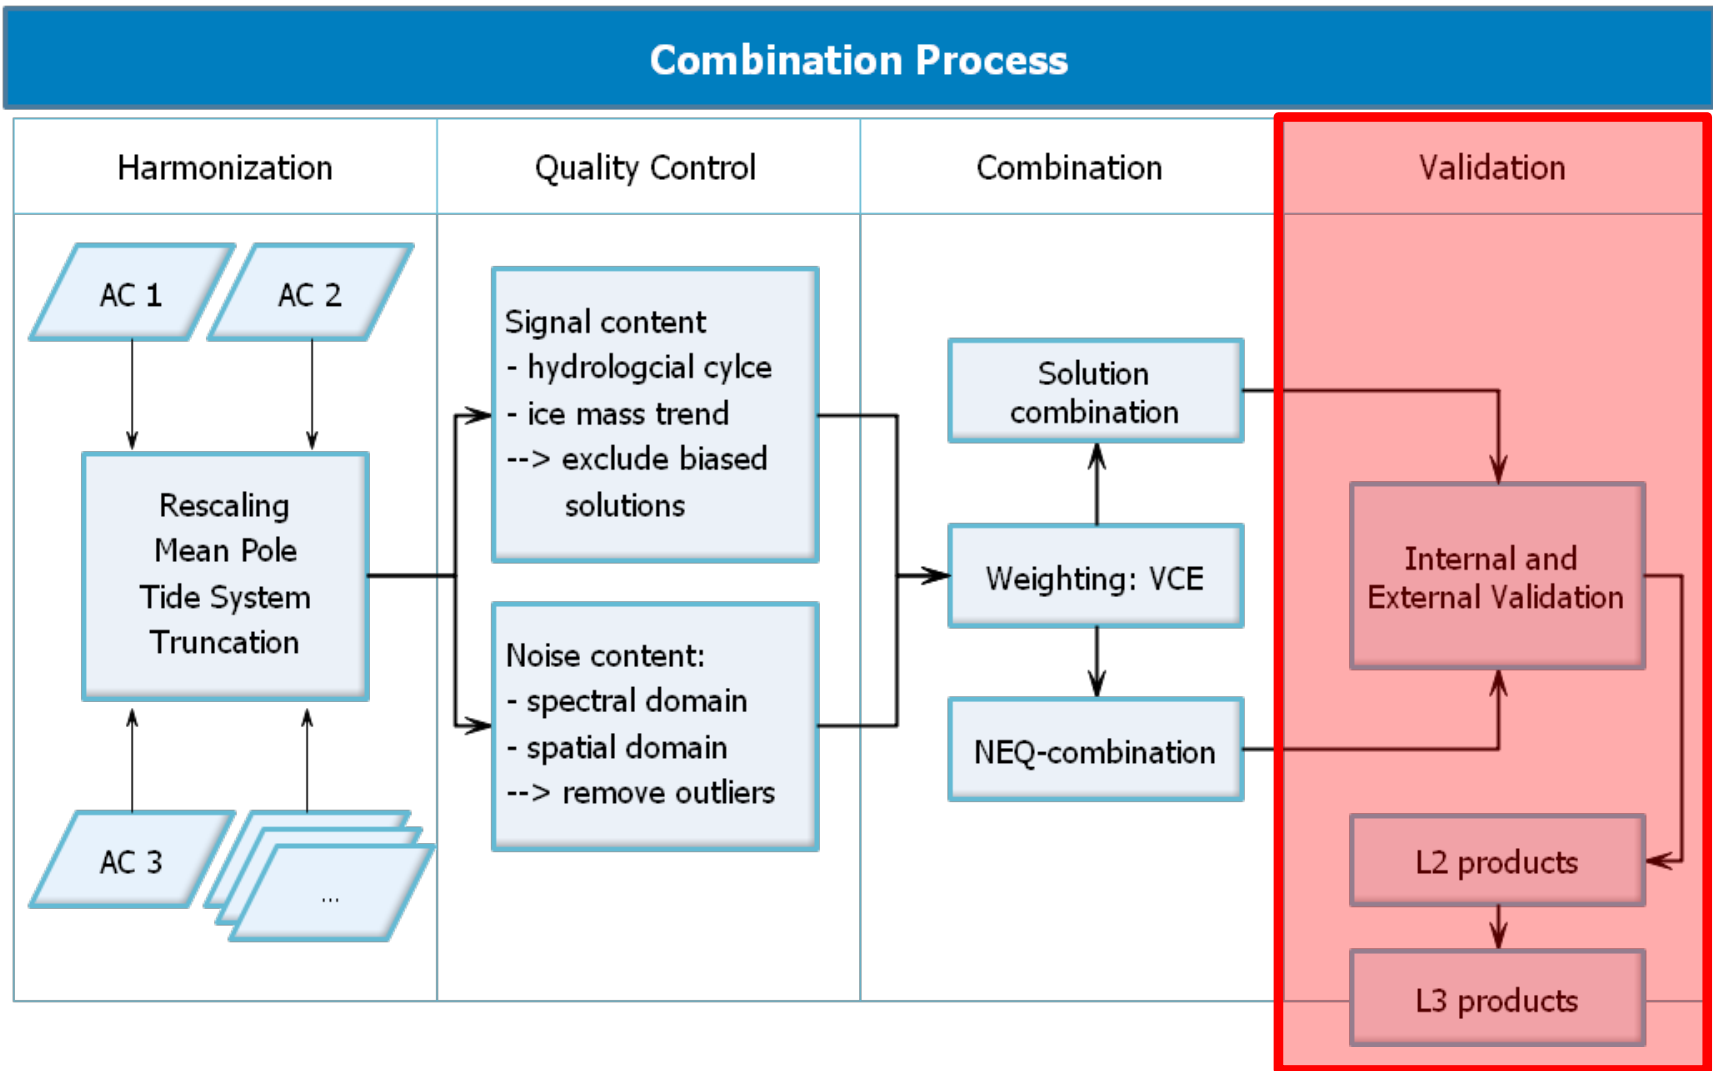

# Combination applying Variance Component Estimation

VCE-derived weights (normalized):

# COST-G – Validation

# Internal Validation: spectral domain

Median degree amplitudes of anomalies wrt a linear and seasonal model (no filtering applied)

For the COST-G GRACE-FO combination no external validation is yet available, in the following slides we therefore provide examples on the validation of the COST-G GRACE combination released in July 2019.

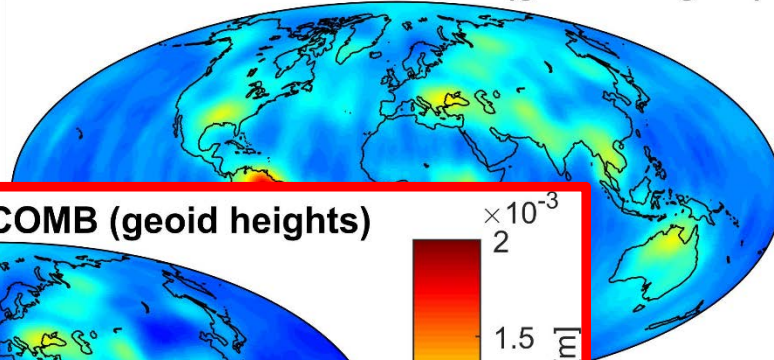

The main gain of the combination is in the range of degrees 15-45.

# Internal Validation: spatial domain

RMS of anomalies of CSR6 (geoid heights)

RMS of anomalies of GFZ6 (geoid heights)

RMS of anomalies of COMB (geoid heights)

RMS of anomalies of GGM05 (geoid heights)

RMS of anomalies of GGM05 (geoid heights)

# Basin-Averaged GIS Mass Changes

Basin-integrated AIS/GIS mass changes based on the sensitivity kernel approach by TU Dresden

Trends agree fairly well for the Greenland Ice Sheet

# Basin-Averaged AIS Mass Changes

**Larger trend  
differences for  
Antarctic Ice Sheet**

# Basin-Averaged AIS Mass Changes

Trends from GFZ seem to be different for East Antarctica. A slight influence on COST-G products may be seen (under investigation).

Basin numbers:  
29: Ant. Peninsula (AP)  
30: East Ant. (EAIS)  
31: West Ant. (WAIS)  
32: AIS

# Comparison to Altimetry

**SIGNAL ASSESSMENT** → Comparison to Altimetry. Presently, two test areas for the signal assessment have been selected: **the Caspian sea and the Black sea**. Correlation coefficient with altimetry over the Caspian Sea: the COST-G solution presents a slight improvement over the TUGRAZ and CSR solutions.

Correlation w. ALT	COST-G	TUGRAZ ITSG18	CSR RL06
DDK5 filter	97.2 %	97.0 %	96.9 %
DDK6 filter	96.6 %	96.5 %	96.3 %

**Method:** *The time series of the TVG solutions are compared with the time series of altimetric heights (from Hydroweb for the Caspian Sea or AVISO+ for the Black Sea). One bias (irrelevant) and one scale factor are adjusted. The criteria are the **scale factor** and **correlation coefficients**. Both should be as close as possible to 1.*

# Orbit Tests with GOCE

- GRACE solutions up to d/o 90 filled up with DIR-6 up to d/o 240:
  - Table shows RMS of orbit fits (cm) for the different test cases (3D residuals, mean values from the 30 individual arcs in question)

Gravity model	Month			
	2009/11	2009/12	2010/10	2010/11
GFZ_RL06	<b>7,38</b>	<b>6,84</b>	<b>6,23</b>	<b>6,18</b>
AIUB_RL02	<b>8,69</b>	<b>8,56</b>	<b>7,39</b>	<b>7,21</b>
CSR_RL06	<b>6,88</b>	<b>9,09</b>	<b>6,65</b>	<b>6,20</b>
GRGS_RL04f	<b>5,88</b>	<b>7,30</b>	<b>5,47</b>	<b>5,83</b>
ITSG_2018_tide_free	<b>5,51</b>	<b>5,12</b>	<b>4,19</b>	<b>4,54</b>
COSTG_RL01	<b>5,03</b>	<b>5,54</b>	<b>4,52</b>	<b>4,72</b>

# Level-2 Product Availability

EGU 2020  
G2.1: Global Geodetic Observing System

# Summary and Outlook

---

- COST-G RL01 Level-2 products for GRACE and Swarm are available from ICGEM
- COST-G RL01 Level-3 products for GRACE are currently being processed and will be made available via GFZ's GravIS portal (<http://gravis.gfz-potsdam.de/>)
- Operational GRACE-FO combination will start shortly after EGU
- CSR and JPL are listed as Partner Analysis Centers in the COST-G ToR
- Inclusion of candidate Analysis Centers (LUH, Chinese ACs) is envisaged in the near future.
