Gravity and geoid metadata

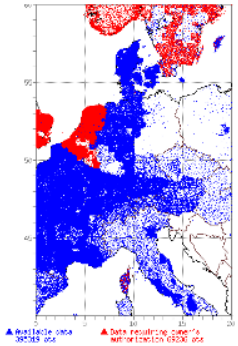
Online applications for the creation of metadata for gravity and geoid data. Service for searching the metadata database.

g–μeta
the gravity metadata editor
(v0.2.6 – beta edition)

N–μeta
the geoid metadata editor
(v0.1.3 – alpha edition)

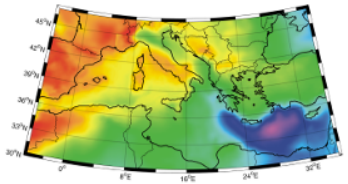
Gravity data

Land, marine, airborne gravity data as point and gridded values. Absolute and relative gracity data, WGM



Geoid

Geoid models and geoid determination software, geoid modeling processing methodologies

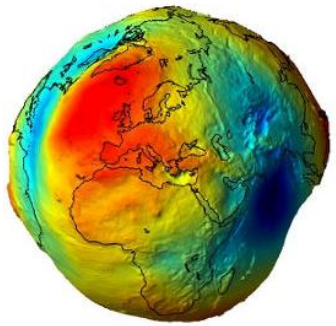


SG and Earth tide data

Temporal variations of the Earth gravity field through long-term records from ground gravimeters, SG data, Earth tide data.

Global Earth Models

Collection and archive of all existing global gravity field models, web interface for access to GEMs, model visualization and service.



Time-variable GEMs

Combined gravity field solutions in SH coefficients and spatial grids for hydrological, oceanic and polar ice sheets applications.

COST-G
Combination Service for Time-variable Gravity Models

DEM data

Digital Elevation Models, relevant software for DEM creation, assessment, manipulation and display, global relief and crustal models and spherical harmonic data sets.

icgem (at) gfz-potsdam.de

For operational LEO-POD a fitted signal model is generated additionally to the monthly products.

The COST-G fitted signal model is available in the ICGEM.2-format from the International Center for Global Earth Models.

It is updated quarterly with the newest combined monthly GRACE-FO gravity fields.

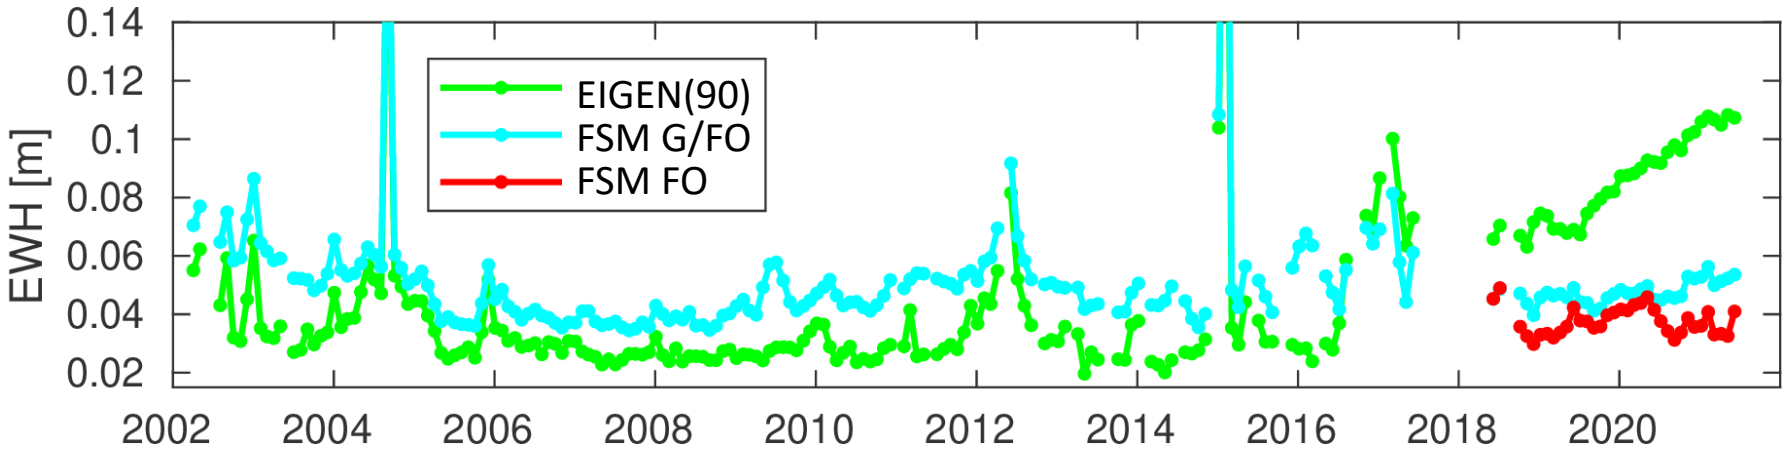
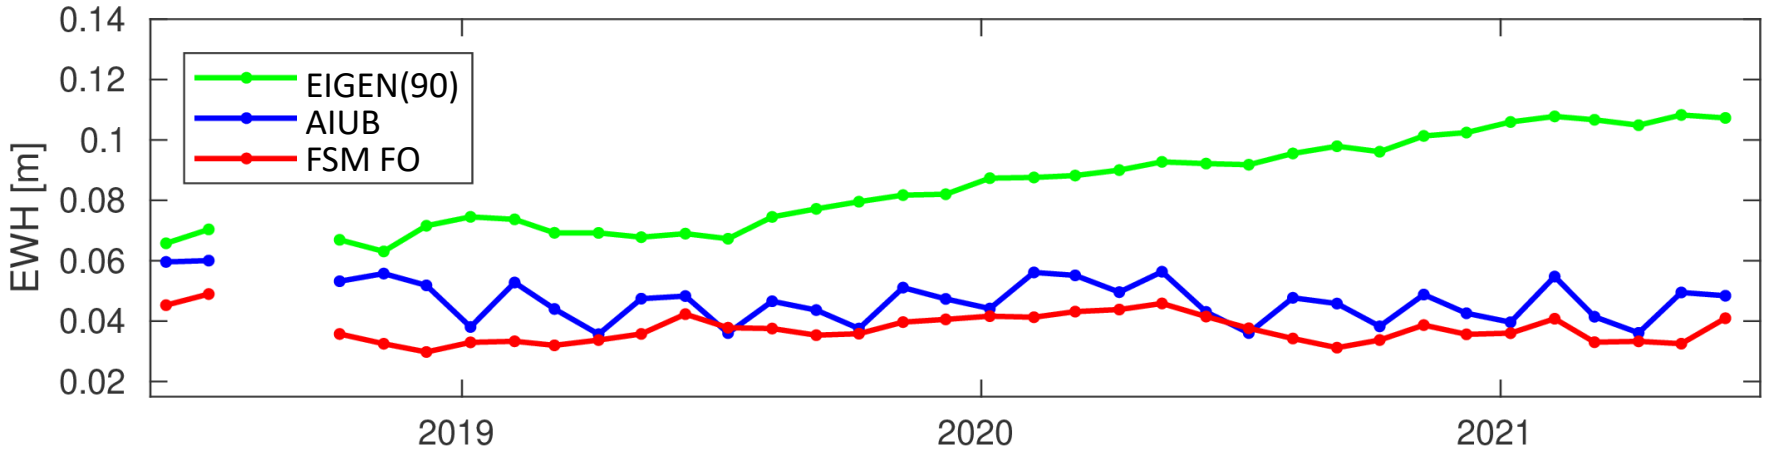
Fitted Signal Model (FSM) for operational LEO-POD

RMS of differences (over land, 300 km Gauss): FSM - monthly gravity fields



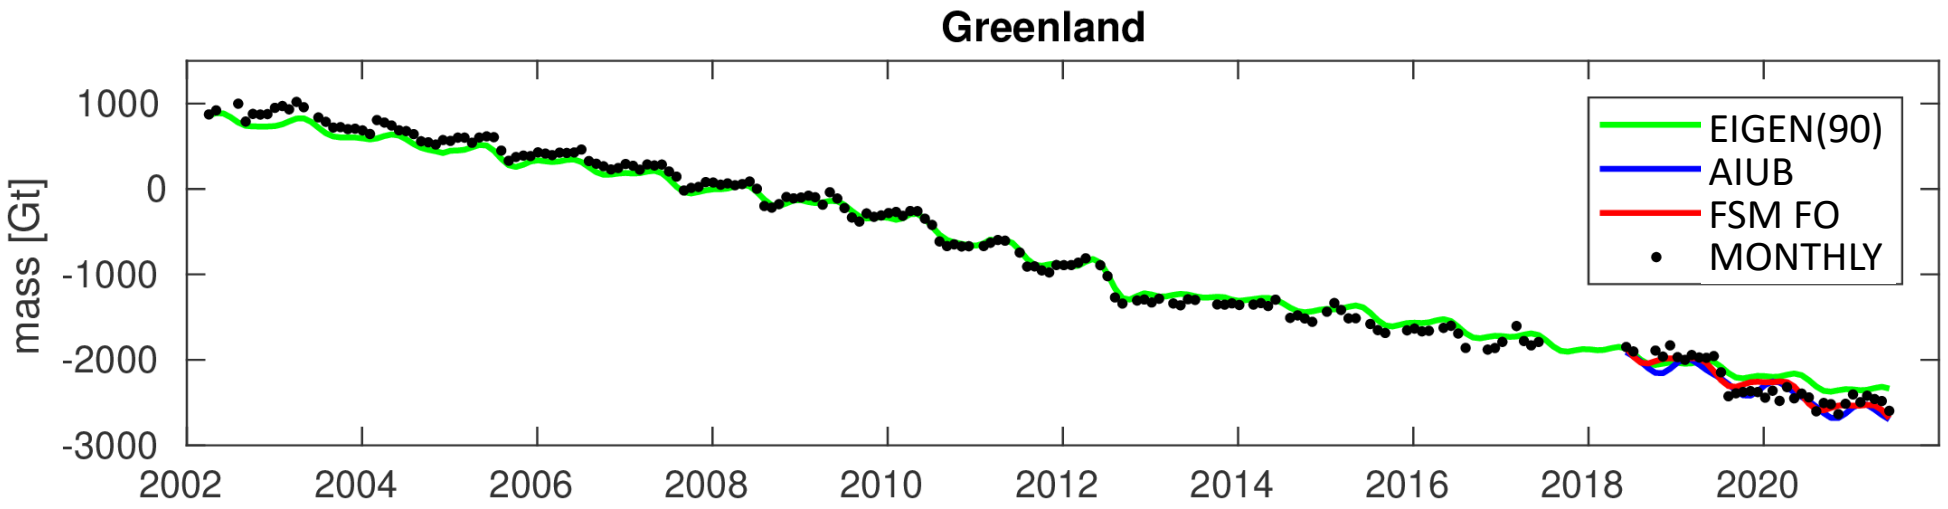


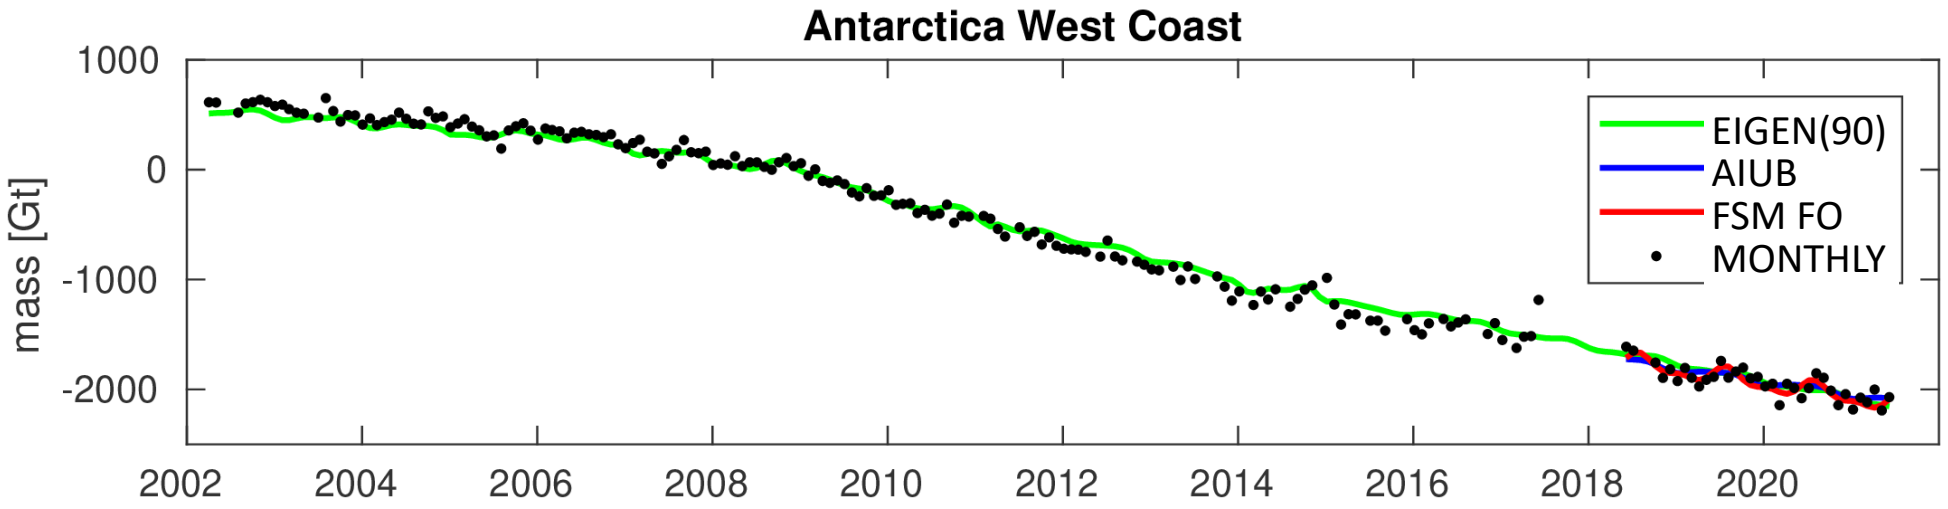
Operational precise orbit determination (POD) of low Earth orbiters (LEO) relies on a Earth gravity model including time-variable gravity (TVG).

The EIGEN-GRGS-RL04 model (green) has been the standard for LEO-POD of altimeter satellites, but the extrapolation to the GRACE-FO period reveals large prediction errors.

For comparison, a model fitted to COST-G GRACE-FO gravity fields is shown (red).

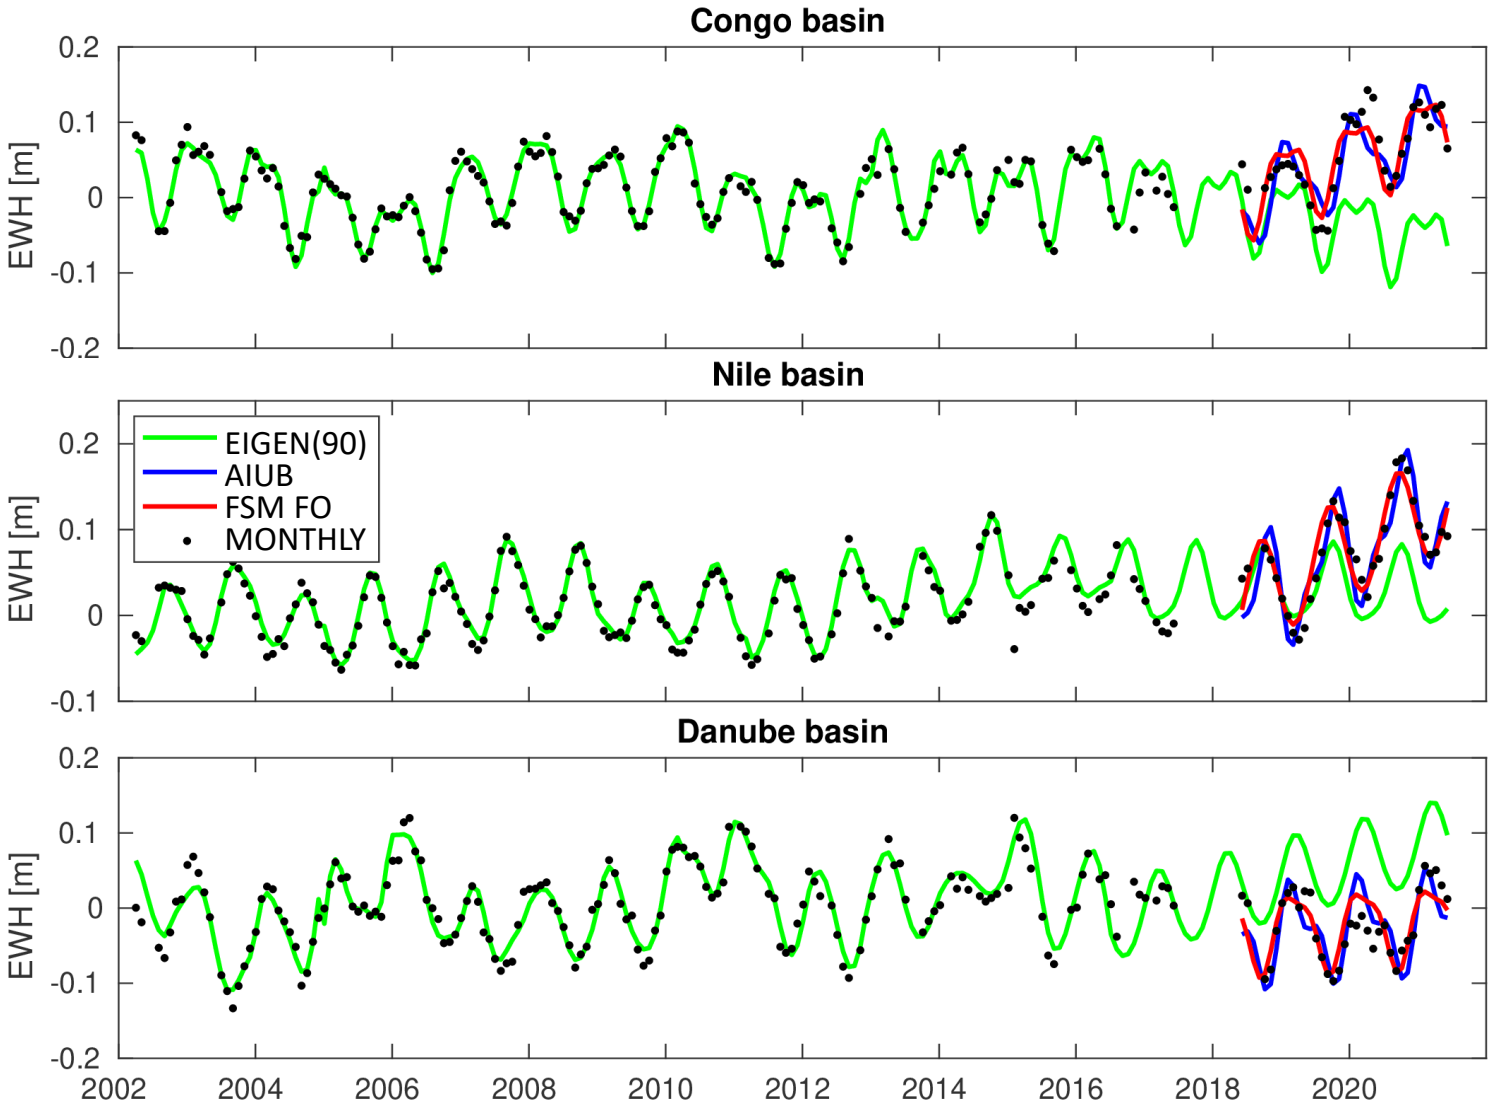
Polar mass trend (no filter)





Surprisingly, the reason for the prediction error in the EIGEN-GRGS-RL04 model (green) seems not to be in regions with strong mass trends.

Hydrological cycle in large river basins (300 km Gauss)

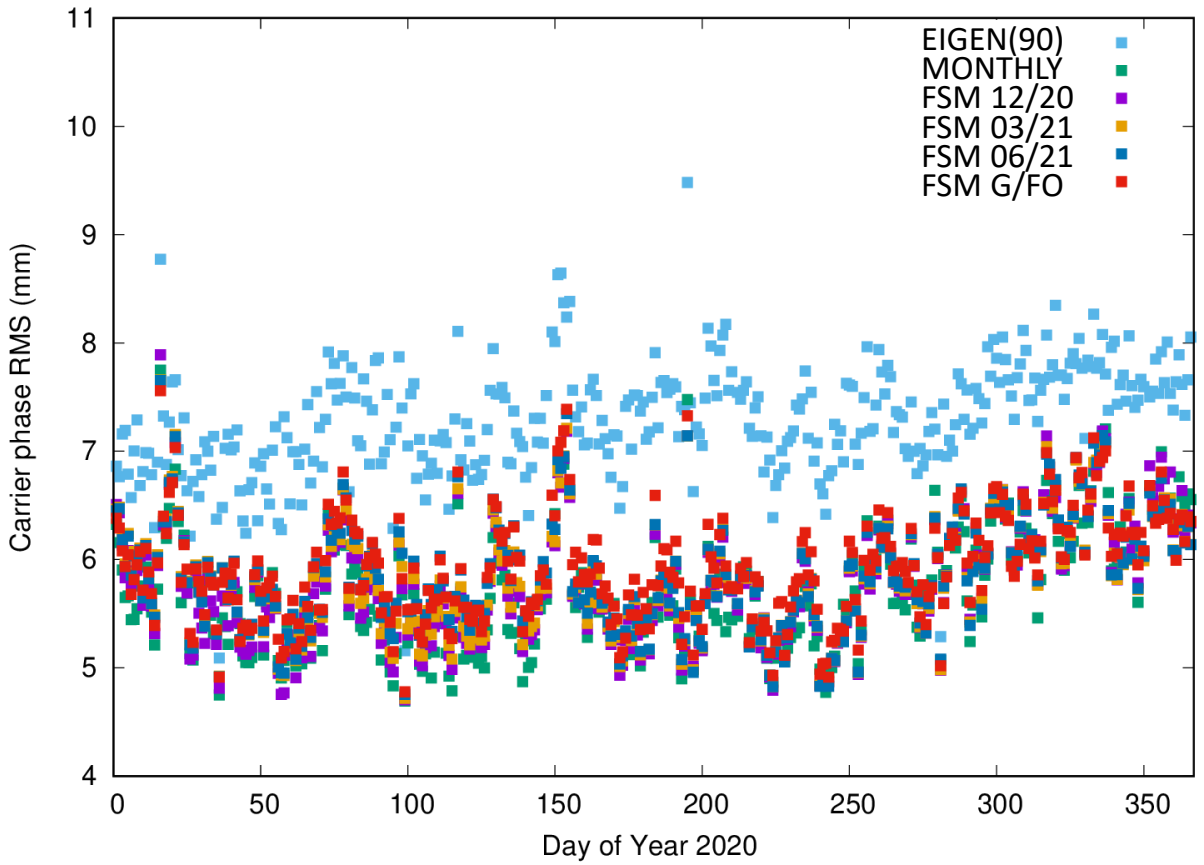


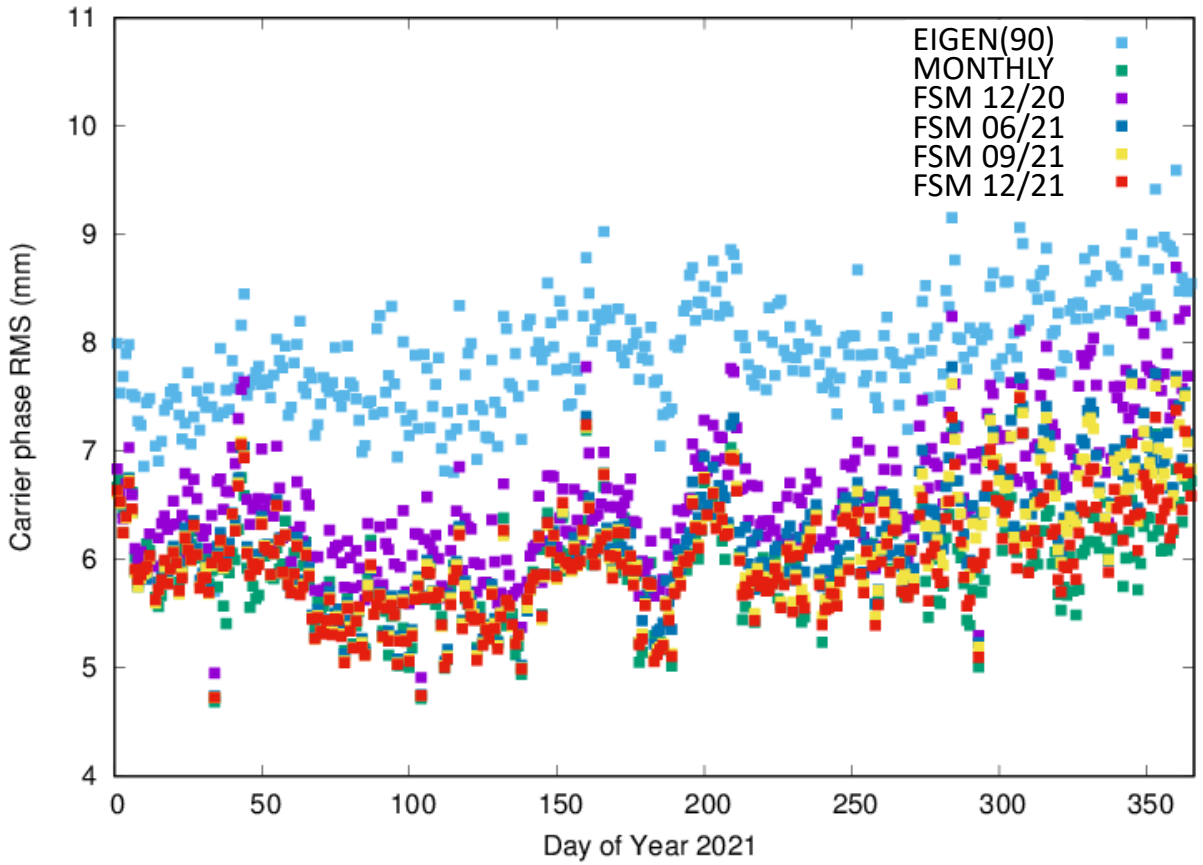
The time-series of monthly GRACE gravity field solutions was fitted in yearly batches for the EIGEN-GRGS-RL04 model.

While the fit in the GRACE period is very good, the extrapolation of the last of these batches leads to large errors in river basins with strong non-seasonal variations.

Application to Sentinel orbit POD

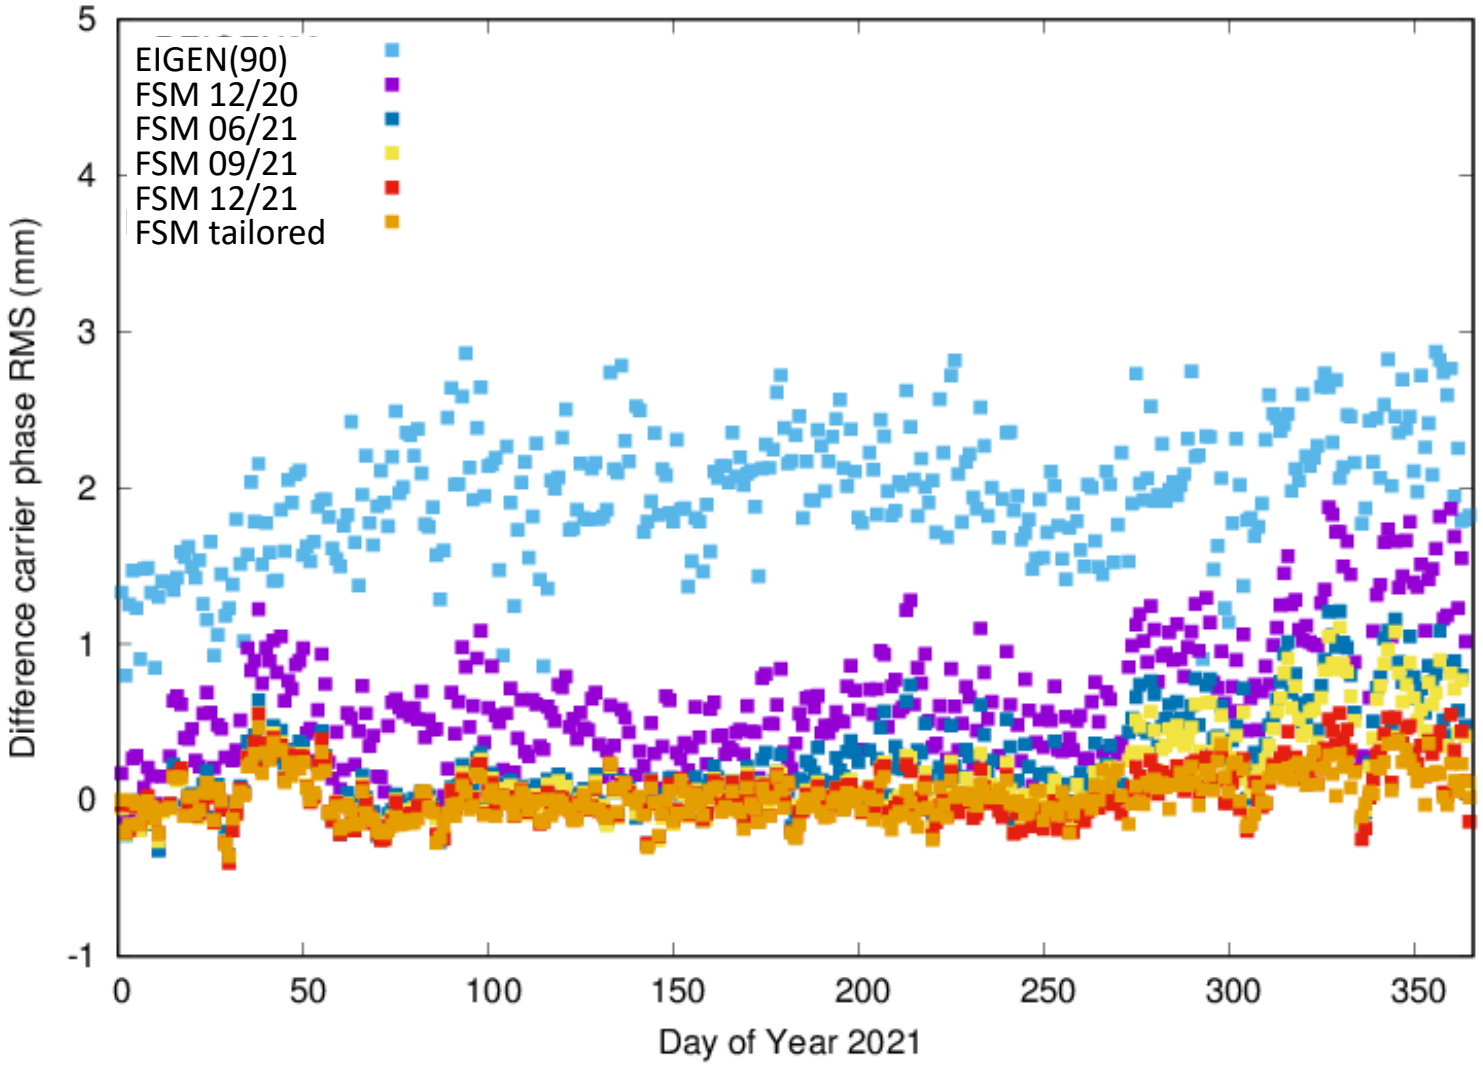
Sentinel - 3B (altitude 811 km) orbit determination

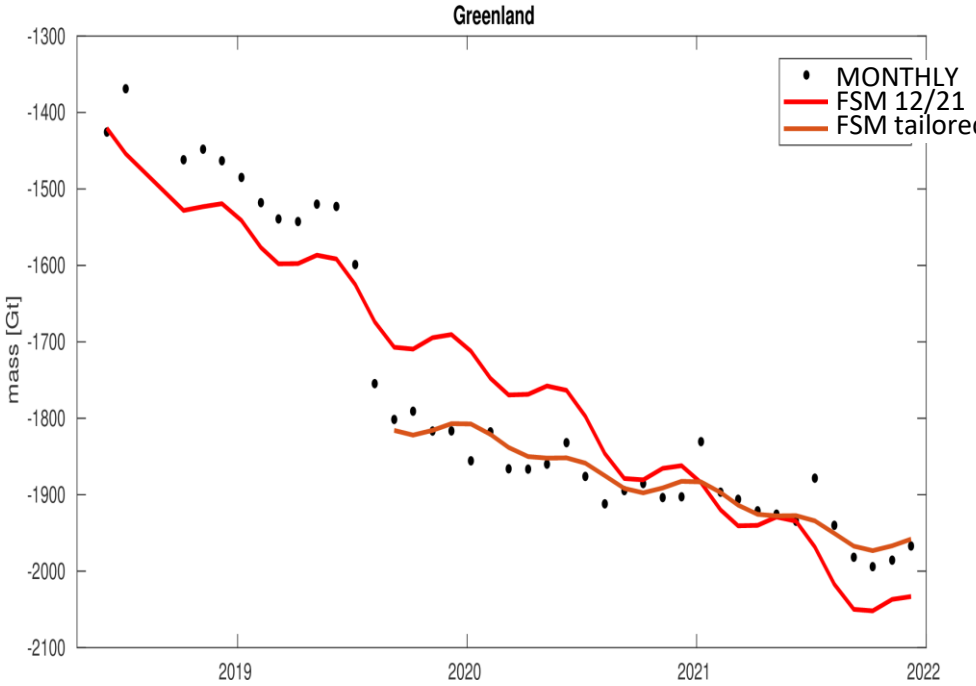




The carrier phase RMS of dynamic Sentinel-3B satellite orbits (orbit altitude 811 km) based on monthly GRACE-FO gravity fields (green) or different fitted signal models reveals the benefit of up-to-date models. All models were truncated at max. degree/order 90.

Impact of fit period on LEO-POD (Sentinel-3B, altitude 811 km)





Carrier phase residuals of Sentinel-3B orbits (811 km orbit altitude) confirm the sensitivity on the data period that entered the model.

Independent orbit validation

SLR-validation Sentinel-3B

Data: Year 2020, Sentinel-3B, SLR validation, 12 stations (cm)

Gravity field model	Mean (cm)	RMS (cm)	Standard deviation (cm)
DEIGEN120	0.29	1.01	0.97
DEIGEN90	0.29	1.01	0.97
D90MONTHLY	0.28	0.91	0.87
D90MODEL2012	0.28	0.92	0.88
RDEIGEN120	0.31	0.91	0.85
RDEIGEN90	0.31	0.91	0.85
RD90MONTHLY	0.31	0.88	0.82

The limited max. degree does not negatively affect LEO POD (S3B)

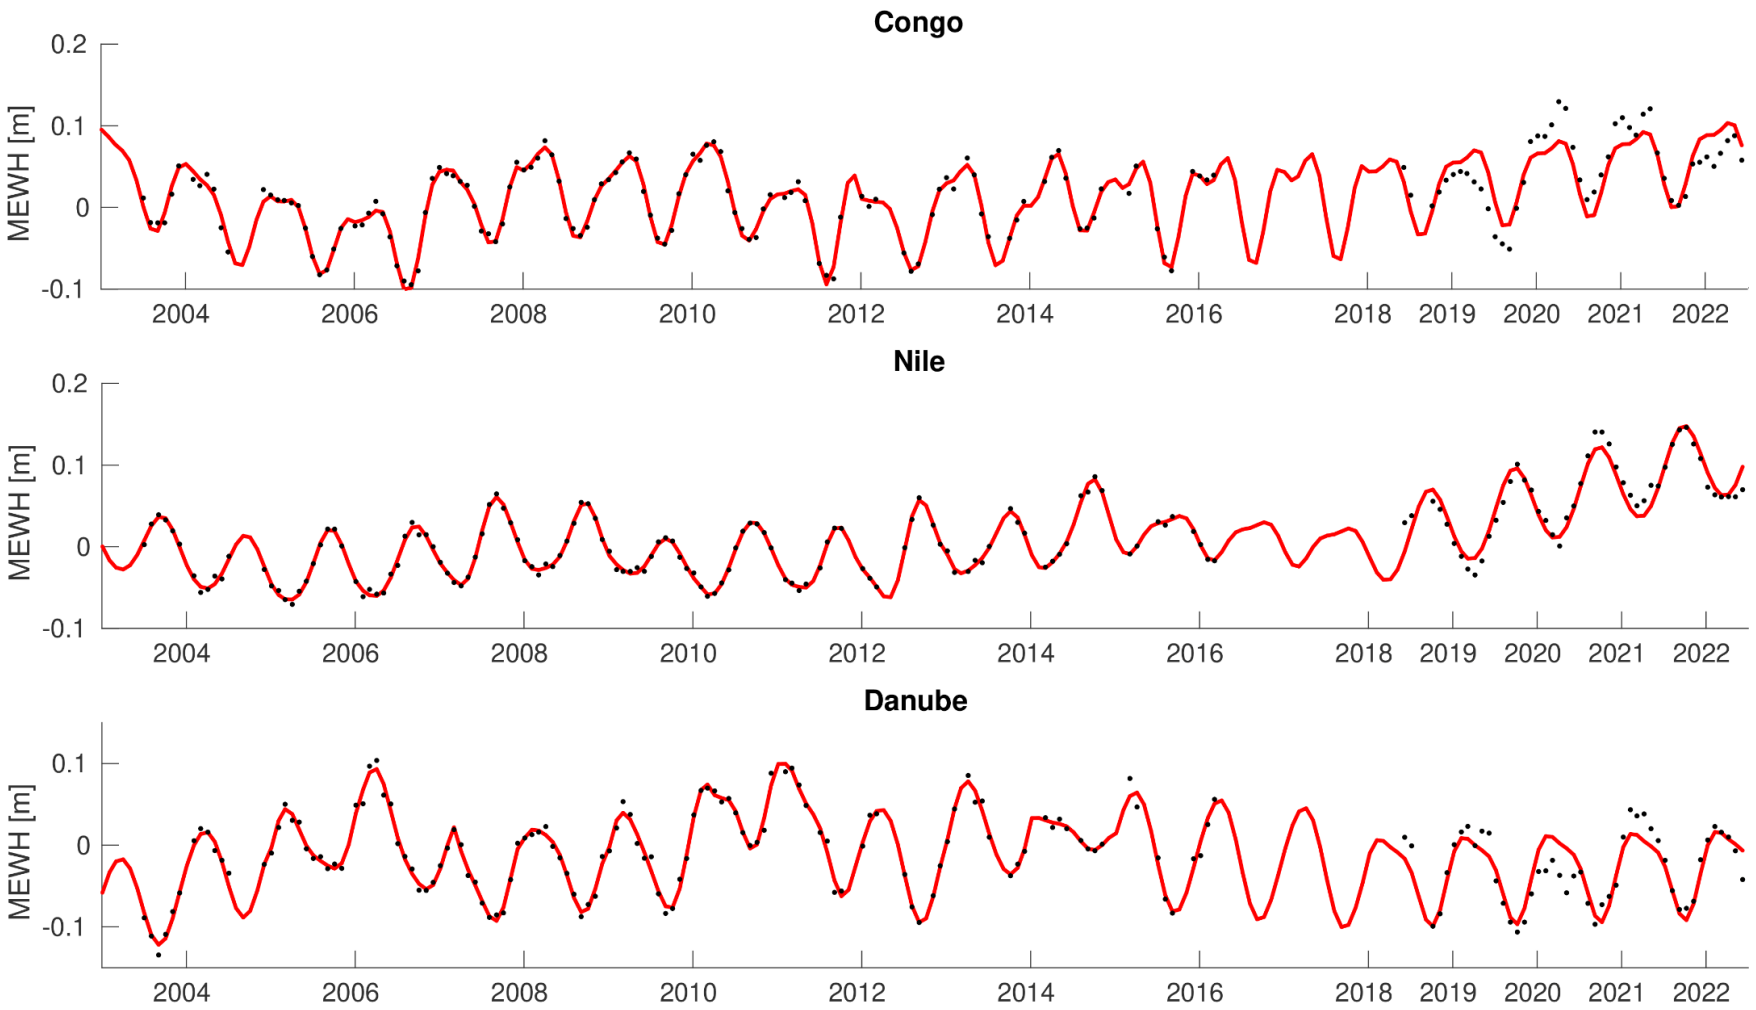
LEO POD profits from monthly gravity fields

The fitted signal models perform close to the monthly gravity fields

Reduced dynamic LEO POD is less sensitive to model deficiencies.

Outlook

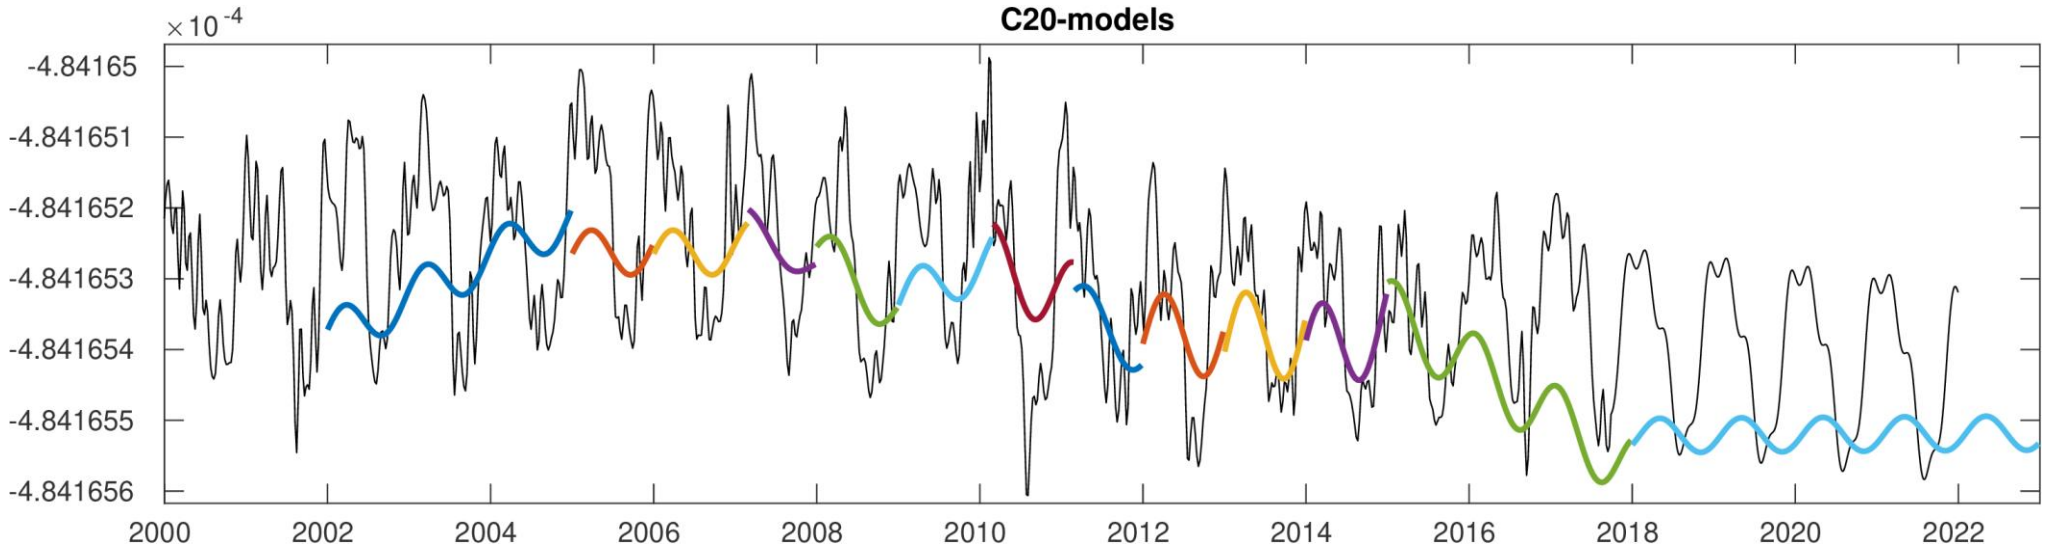
Extension of COST-G FSM for REPRO purposes



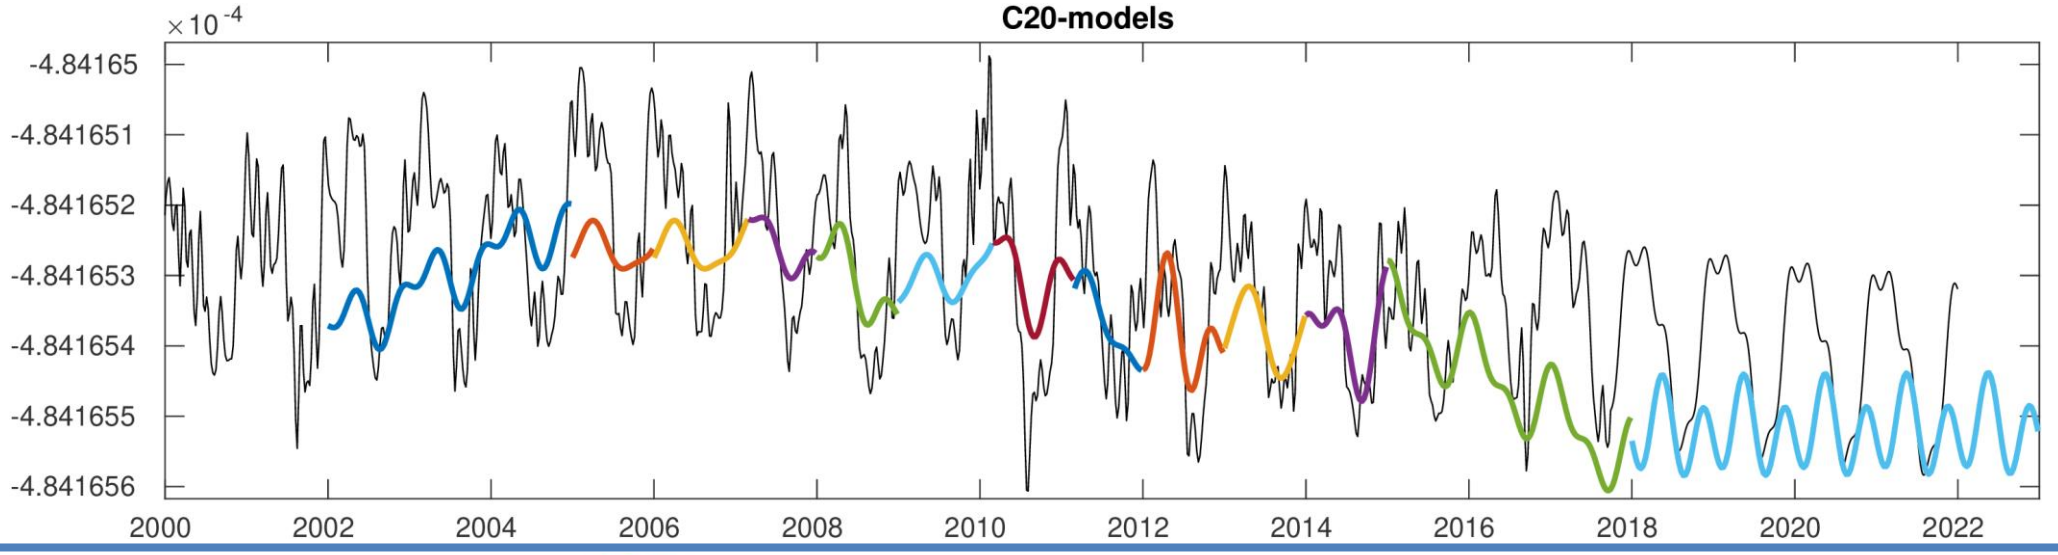
Extension of the COST-G FSM to cover the whole GRACE/FO period:

- Fit of GRACE monthly models in yearly batches
- Continuity conditions between individual batches
- Fit of GRACE-FO monthly models in one batch to allow for prediction.

Comparsion of C20-Models



Only trends and annual variations



Including semi-annual variations
