1 Introduction

The Swiss National Science Foundation (SNSF) aims to track and study the career paths of applicants to postdoctoral SNSF career funding schemes by means of the SNSF Career Tracker Cohorts (CTC) study. The SNSF has mandated the Interfaculty Centre for Educational Research (ICER), in collaboration with the Interdisciplinary Centre for Gender Studies (ICFG) at the University of Bern, to conduct the study. The main goals of the CTC are to monitor the careers of researchers and to identify the impact on career development attributable to the SNSF's career funding schemes (Early Postdoc.Mobility,¹ Postdoc.Mobility, Ambizione, Eccellenza, and PRIMA). For more information about the project, consult the study documentation (Lüthi, Widmer, et al., 2022) and the project website at <http://careertrackercohorts.ch/>.

This documentation describes the first monitoring survey administered to members of the CTC-21 cohort: that is, to researchers who applied for Ambizione or PRIMA by November 1, 2020; for Eccellenza by February 1, 2021; or for Postdoc.Mobility by February 1, 2021 (CTC-21 Monitoring 1 Survey). Unlike the CTC-19 and the CTC-20 cohorts, the CTC-21 cohort only includes participants surveyed in spring 2021. The documentation includes a detailed description of the questionnaire, the surveys, and the resulting data sets. The appendix contains screenshots of the online questionnaire, codebooks of the data sets (including frequency counts), and facsimiles of survey materials.

2 The questionnaire

2.1 Overview of content

The first monitoring questionnaire consists of seven parts, covering the following topics:

Part 1: Current status of, and information on, the SNSF grant

Part 2: Current employment situation, including research activities

Part 3: Information on the doctorate/PhD (if completed after the previous survey participated in)

Part 4: Occupational history between the base survey and the start of the current working situation

Part 5: Academic mobility and research productivity

Part 6: Career prospects and aspirations

Part 7: Sociodemographic information and life situation

Please consider that most questions in Part 1 (Questions 1 – 48 in the questionnaire: Wilhelmi et al., 2023) are answered only by those with a running grant, and that most questions in Part 2 (Questions 49 – 82 in the questionnaire: Wilhelmi et al., 2023), are only answered by respondents without a running/interrupted grant (except the questions on work-time percentage;

¹Since 2021, Early Postdoc.Mobility has been integrated into Postdoc.Mobility.

number of working hours; working from home; exchange with the network; productivity, creativity, and motivation; and income). However, there are (almost) identical questions in both parts, for instance regarding position, supervision, and tasks in addition to research. Consequently, in the provided data sets (see Section 4.1), there are sometimes two different variables for (almost) the same questions. In these cases, the variable names are the same except that the variable names for Part 1 have a “g” as a prefix, for example *ginstit* versus *instit*.

Screenshots of the questionnaire pages are provided in Appendix A.2. In addition, a paper-and-pencil proxy version of the questionnaire, including information on filters and variable names, is provided as a standalone document (Wilhelmi et al., 2023).

2.2 Questions adopted from other studies

Several questions were adopted from previous surveys. The most important sources of the monitoring survey were the “Graduate Survey” of the Federal Statistical Office (2016a, 2016b), the “Career Tracking of Doctorate Holders” of the European Science Foundation (2015, 2017), the questionnaires of “Monitoring European Research Council’s Implementation of Excellence” (MERCIE; Huber et al., 2015), the “Doctoral Candidates and Doctorate Holders Study ProFile” (Institute for Research Information and Quality Assurance, 2015; Tesch, 2015), and the evaluation of the SNSF Doc.CH funding scheme (Lüthi et al., 2019). The detailed sources of all adapted questions can be found below the screenshots of the questionnaire pages in Appendix A.2.

2.3 Questionnaire development

The monitoring survey in spring 2022 (CTC-21 Monitoring 1 Survey) used the same questionnaire as the third monitoring survey with the CTC-18 cohort (see Lüthi, Zimmermann, et al., 2022; for information on the development of the questionnaire, see Kittelberger et al., 2022a), with some minor modifications to fix a number of issues that surfaced during the preparation of the CTC-18 data. These modifications are as follows:

Question 67: Percentage working from home

We deleted the answer category "I do not currently work from home", and added "(0 – 100 percent)" in the question for clarification: "What percentage (0 – 100 percent) of your actual working time do you currently work from home?"

2.4 Final implementation

2.4.1 LimeSurvey

As with the previous surveys, the CTC-21 questionnaire was implemented in the online survey software LimeSurvey 3, hosted on a dedicated server at the University of Bern (LimeSurvey is an open-source product; see <http://www.limesurvey.org/>). Due to the responsive design of the questionnaire, the survey could either be completed on desktop computers or on mobile devices.

Respondents were invited to complete the survey using personalized links. The links were constructed as `https://survey.careertrackercohorts.ch/<surveyid>/<code>`, where `<surveyid>` is the ID of the respective survey and `<code>` is the respondent's identification code for survey access. While completing the survey, it was possible for respondents to navigate back and view or correct the answers they had given on previous screens (including deactivating previously activated radio buttons). Furthermore, it was possible to interrupt the survey and continue on the same screen at a later point in time. All questions in the survey were non-mandatory: it was always possible to move on with the survey after leaving a question unanswered.

When programming the questionnaire, we took care to ensure that the survey's functionality depended as little as possible on the technology of the respondent's device. In particular, we avoided JavaScript as much as possible. We completely abandoned JavaScript in cases where the questionnaire's content would have been affected (e.g., filtering, suppression of specific questions or answer options on a screen, dynamic wording of questions) and used it only for supporting features (e.g., autocomplete feature, calendar widget). If JavaScript was deactivated on a respondent's device so that these features were not working, additional instructions were displayed to support the respondent (e.g., information on the input format in the case of the calendar widget; see Wilhelmi et al., 2023 for details). The JavaScript-based features in the survey were as follows: autocomplete and placeholders in text fields; adding-up of percentages in the question about time spent on research and other activities; automatic activation/deactivation of check-boxes depending on text being entered in an "other" field (or similar); and automatic activation/deactivation of check-boxes in multiple-choice questions to avoid logically inconsistent answers. On the first page (variable *JSbegin*) and on the last page (variable *JSend*), we recorded whether JavaScript was running or not. Due to a technical error, we did not record the variable *JSend* in the CTC-21-Monitoring 1 Survey.

2.4.2 Predefined lists

For some open questions, we used predefined lists of possible answers – as in the previous surveys – to make dynamic suggestions to the respondents (autocomplete feature). After typing at least two letters (country lists) or three letters (all other lists), respondents could select the appropriate answer from a list of matching elements (the list was dynamically updated upon further typing). However, respondents also had the option to type in a custom answer. We used the following lists:²

List of occupations

For occupations (Question 55), we used an English translation of the "Berufsdatenbank 2017" of the Federal Statistical Office (2018), which we merged with the original "Berufsdatenbank 2017" (Federal Statistical Office, 2017) to obtain ISCO-08 (International Standard Classification of Occupations 2008) codes, and with a list from the International Labour Organization (n.d.) to obtain the labels for ISCO-08. The English list of occupa-

²These lists were also used to classify administrative data and survey variables, after applying the following modifications: all higher education institutions reported in the surveys conducted in 2022 were added to the list of institutions.

tions contained some duplicate job titles corresponding to different ISCO-08 codes; in such cases, we selected the entry with the highest-ranking ISCO-08 code. We also removed some titles that referred to a bachelor's or master's degree instead of an occupation. Furthermore, we dropped unclearly specified jobs at universities or research jobs in general, such as "research assistant" or "university lecturer", since we are interested in the exact occupational title, including the indication of the discipline. The final list we used contained 4,776 job titles (see column `occup_en_survey` in the file `CTC-21-Monitoring-1-Occupations.xlsx`). This is the same list that we used for the surveys conducted in 2021 (see, for example, `CTC-21-Base-Occupations.xlsx`).

List of countries

For countries (Questions 35, 54, 86, and 95), we used the English short-form country names available from the state and territory codes ("Staaten- und Gebietsschlüssel") of the Federal Statistical Office (2021). We removed countries that are not recognized by Switzerland. Furthermore, we added common country abbreviations, namely "UK" and "USA". The final list we used for the survey contained 196 countries (see column `centry_en_survey` in the file `CTC-21-Monitoring-1-Countries.xlsx`).

List of research domains and disciplines

For research domains and disciplines (Questions 46, 78, and 85), we used the "SNSF research domains and disciplines" list (Swiss National Science Foundation, 2016), after deleting "other" categories, adding a superordinate category for preventive medicine, and making some minor corrections. Additionally, we expanded the list by adding disciplines that were frequently mentioned in the surveys conducted between 2018 and 2020 (see column `discipline_en_exp` in the file `CTC-21-Monitoring-1-Disciplines.xlsx`).

List of institutions

For universities and other research institutions (Questions 7, 35, 38, 75, and 101), we used the Times Higher Education World University Ranking 2022, which covers 1,000 universities worldwide (University Rankings, 2022). To ensure all Swiss universities were included, we added the University of Lucerne to the list. Since 2020, the Università della Svizzera italiana has also been on the list under the name "University of Lugano" and we renamed it "Università della Svizzera italiana". We also added all higher education institutions specified in the surveys conducted between 2018 and 2021. For the online survey, we rearranged the list such that Swiss universities appeared at the top (see column `institutioncentrysurvey` in the file `CTC-21-Monitoring-1-Institutions.xlsx`).

2.4.3 Use of administrative data and dependent interviewing

As in the previous monitoring surveys of the CTC-18, CTC-19, and CTC-20 cohorts, we used administrative data and base survey data in order to reduce the complexity of the survey, minimize the effort required of the respondents, and enhance the data quality. Administrative data was used, for example, to provide information on the application to which the questions referred or for filter definitions. The list below shows the variables from administrative records

that were used for the first monitoring survey. The variables *IDapplication#*, *scheme#*, and *application#* refer to a respondent's past/present/future grant that received a positive funding decision and are relevant for the survey. A respondent may have (had) more than one relevant grant. The number is indicated in the variable *gnum*, with a maximum of four relevant grants (see Section 4.5.1 for additional details on specific variables, # = 1-4).

<i>fundingrel</i>	Has relevant grant(s)
<i>gnum</i>	Number of relevant grants
<i>IDapplication#</i>	CTC application ID of relevant grant#
<i>scheme#</i>	Funding scheme of relevant grant#
<i>application#</i>	Application date of relevant grant#

The following variables derived from the base survey data set were used to filter the respondents regarding the questionnaire part of the doctorate/PhD (only respondents who had completed their doctorate/PhD after the base survey were asked to provide information).

<i>sphdstart</i>	Data from previous survey: started PhD
<i>sphdend</i>	Data from previous survey: finished PhD

Moreover, as in the previous monitoring surveys, some data was gathered by means of dependent interviewing. This is a method used in panel surveys, whereby the respondents are not asked the same questions in every wave again but are provided with questions based on information from administrative records or previous surveys (for more information see, for example, Jäckle, 2008). This survey technique was used at two points in the questionnaire, as described in the next two paragraphs.

First, if respondents were employed at the time of the base survey (*sempl* = 1) and still had the same (primary) job with the same employer at the time of the first monitoring survey (Question 53, *samejob* = 1), we displayed the information from the base survey and asked if it still applied to their current situation (Question 54). If, during the base survey, the respondent did not answer questions related to the variables *soccup* to *sovertimeno* in the list below regarding their job (*sjobnoinfo* = 1), the dependent interviewing technique was not applied. The following variables derived from the base survey data set were used (see Section 4.5.1 for additional details on specific variables).

<i>sdatefield</i>	Data from previous survey: date of most recent survey fielded
<i>sdatepart</i>	Data from previous survey: date of survey participated in
<i>sempl</i>	Data from previous survey: currently engaged in paid employment
<i>sjobnum</i>	Data from previous survey: one or several jobs
<i>soccup</i>	Data from previous survey: occupation (removed to preserve anonymity)
<i>sprofstatus</i>	Data from previous survey: current professional status
<i>semplnum</i>	Data from previous survey: number of employees
<i>ssupervis</i>	Data from previous survey: supervisory function
<i>ssupervisnum</i>	Data from previous survey: number of subordinates
<i>sbudget</i>	Data from previous survey: budget responsibility

<i>sbudgetnum</i>	Data from previous survey: current annual budget (removed to preserve anonymity)
<i>semplcntry</i>	Data from previous survey: country of employment (removed to preserve anonymity)
<i>ssector</i>	Data from previous survey: economic sector of current job
<i>scontract</i>	Data from previous survey: permanent or fixed-term contract
<i>scontractnum</i>	Data from previous survey: contract duration
<i>sworkhreport</i>	Data from previous survey: must report working hours to employer
<i>sovertime</i>	Data from previous survey: overtime compensation: yes, by taking time off
<i>sovertimepay</i>	Data from previous survey: overtime compensation: yes, by claiming extra pay
<i>sovertimeno</i>	Data from previous survey: overtime compensation: no
<i>sjobnoinfo</i>	Data from previous survey: no information about job available

In contrast to the subsequent monitoring surveys, the section of dependent interviewing related to the grant is not relevant in the first monitoring survey. This is due to the fact that the base survey was carried out shortly before the funding decision, meaning participants could not have had a running grant at that time. Consequently, variables pertaining to the dependent interviewing on the grant (sameg*) are not included in the dataset. However, the corresponding questions and variables are visible in the questionnaire and in the screenshots, as the same questionnaire was used for all monitoring surveys and the course of the respective cohort is controlled via filters.

Second, those who already had a child, or several children, at the time of the base survey (*schildren* = 1) were shown the number of children they had indicated at that time (*schildrennum*) and asked if another child had been born in the meantime (Question 116). The following variables derived from the base survey data set were used (see Section 4.5.2 for additional details on specific variables).

<i>schildren</i>	Data from previous survey: has children
<i>schildrennum</i>	Data from previous survey: number of children

3 The survey

3.1 Study population and invited applicants

Table 1 gives an overview of the study population and the number of applicants invited to take part in the first monitoring survey. The study population of the CTC-21 cohort comprises all researchers who applied for the SNSF career funding schemes between November 2020 and February 2021 (i.e., for Ambizione or PRIMA by November 1, 2020; or for Eccellenza and Postdoc.Mobility by February 1, 2021), whose submitted documents passed the formal examination, whose application was not a follow-up proposal for an ongoing grant, and who

did not withdraw their application before a deadline shortly before the survey start (for the 2021 base survey, the deadline was March 16, 2021). Applicants were included in the study irrespective of whether their applications turned out to be successful or not (see Kittelberger et al., 2022b for more information). Researchers in the study population who had completed the base survey at least partially in 2021 were invited to participate in the first monitoring survey.

Table 1: Study population and invited applicants for the CTC-21 Monitoring 1 Survey

Study population (net number of applicants)	1207
Number of applicants interviewed within another cohort	380
Number of applicants who did not take part in base survey in 2021	77
Number of applicants not invited for other reasons	0
Number of applicants invited to take part in 1st monitoring survey in 2022	750
Percent of study population	62.1

3.2 Field work

In spring 2023, for the first time, all the monitoring surveys for CTC-19, CTC-20 and CTC-21 used the exact same questionnaire and were conducted simultaneously. The field phase of the data collection started on April 28, 2022. The applicants were invited by email to participate in the survey of the CTC study on Thursday, April 28, using the mailing feature of LimeSurvey (see Section 2.4.1 for more information on LimeSurvey). These emails (736 emails) contained a personalized link for participants to start the online survey. A first reminder email, again containing the personalized survey link, was sent out six days after the initial invitation, on Wednesday, May 4, to all people who had not yet responded (600 emails). Another six days later, on Tuesday, May 10, the project team sent a second reminder email to all invited people who had received a negative funding decision or had withdrawn their most recent submission, and who had not yet completed the survey (117 emails). On Wednesday, May 11, the SNSF sent a reminder email, including a thank you message, to all those who had received a positive funding decision in response to their most recent application and had not withdrawn their grant in the meantime. Shortly afterwards, and as announced in the message sent by the SNSF, the project team at the University of Bern sent an email containing the personalized survey link to all those applicants who had received a positive funding decision for their most recent application and who had not yet participated up to this point (105 emails). On Thursday, May 12, we sent a postal letter to all people who had not yet participated in the first monitoring survey (478 letters).³ Since we could not be sure that all people had read the invitation and reminder emails, this message was written in the form of an invitation letter. On Friday, May 20, and Wednesday, May 25, a third reminder email was sent (415 emails). On Tuesday, May

³Another 16 letters could not be sent because of invalid postal addresses.

31, a final reminder email was sent (343 emails) in which the remaining applicants were asked to complete the survey by Friday, June 3. Since no valid email address could be found for fourteen study participants, a postal invitation letter was sent to them on Friday, April 29. A reminder letter was sent out two weeks after the invitation letter, on Thursday, May 12, to belated respondents (eleven letters).

Facsimiles of all messages are provided in Appendix A.1.

3.3 Response rate

Figure 1 displays how the response rate⁴ developed over time. As can be seen, each reminder had an effect on the response rate. Due to a technical error, not all respondents received the second reminder, hence the project team sent a reminder to these respondents five days after the third reminder. Most responses occurred within one or two days after receiving the invitation or reminder message, and the curve levels off afterwards.

Figure 1: Response rate over time

Note: Only the time axis of the official survey duration is shown. Only reminder emails are drawn in (postal letters are not displayed).

Those who had not participated in the survey by the day after the second reminder email were sent a postal invitation letter. On May 12, 398 postal invitation letters sent were delivered, and a further 80 letters could not be delivered. Analyses show that survey participation was higher for those people whose invitation letter could be delivered (44%) than for those whose letter could not be delivered (28%). However, it remains unclear whether those people whose letter could not be delivered would have reacted differently to the postal invitation letter.

⁴The response rate is calculated as the number of completed interviews divided by the number of all invited people (people who could not be invited are excluded).

In total, 453 of the 750 who were invited to participate completed the survey, which results in a response rate of 60% (see Table 2).⁵ Of the whole study population, 38% completed the survey. The questionnaire is considered to be completed if at least 70% of all applicable questions were answered (see Section 4.5.1, variable *status*).

Comparing grantees (i.e., those who received a positive decision in response to their application submitted between November 2020 and February 2021) and non-grantees (i.e., those who received a negative decision in response to their application submitted between November 2020 and February 2021, or who withdrew their submission before the decision date) reveals a clear difference in the response rate. Among the grantees, 83% (161 of 195) completed the first monitoring survey, while among the non-grantees, 53% (292 of 555) took part in the survey.

Table 2: Number of respondents and response rate by funding status and in total

	Grantees ^a		Non-grantees ^b		Total	
	<i>N</i>	Percent	<i>N</i>	Percent	<i>N</i>	Percent
Number of invited applicants	195	26.0	555	74.0	750	100.0
Participated before 1st reminder	49	25.1	89	16.0	138	18.4
Participated before 2nd reminder	90	46.2	159	28.6	249	33.2
Participated before 3rd reminder	129	66.2	192	34.6	321	42.8
Participated before 4th reminder	146	74.9	247	44.5	393	52.4
Total participation	161	82.6	292	52.6	453	60.4

^a Grantees include all study participants who received a positive decision in response to their submitted application in fall 2019.

^b Non-grantees include all study participants who did not receive a positive decision in response to their submitted application in fall 2019 (including participants who withdrew their application before the decision date).

3.4 Interview duration

The distribution of the duration of interviews is shown in Figure 2 (including only completed questionnaires, i.e., excluding respondents who responded to less than 70% of the questions). The mean interview duration was 17.2 minutes and the median was 14.5 minutes. Overall, 75% of the participants completed the questionnaire within 19.1 minutes.

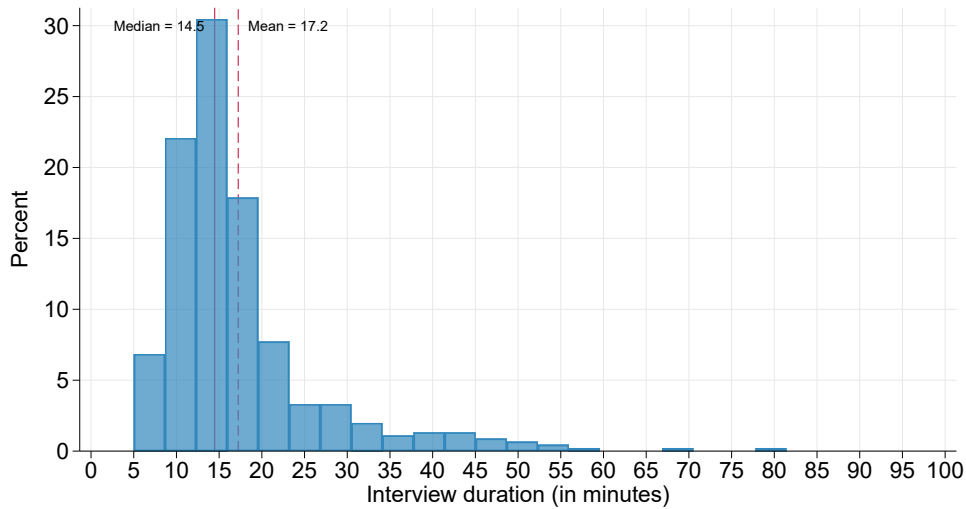

4 The data

4.1 Provided data sets

The CTC data is split into two files: a main data file (CTC-21-Monitoring-1.*) and an auxiliary data file (CTC-21-Monitoring-1-AUX.*). The main file should be sufficient for most analy-

⁵Note that some people of the study population were not invited to take part in the first monitoring survey of the CTC-21 cohort because they had been interviewed within another cohort. For details, see Table 1.

Figure 2: Interview duration (completed questionnaires only)

ses. If a variable from the auxiliary file is needed, the two files can be merged by matching on the variable *IDperson* and the variable *IDapplication*. The auxiliary file contains original (unedited) survey responses for those variables that have been edited during data preparation (using the suffix *_raw* for the original variables),⁶ variables with data from the previous survey used for the dependent interviewing, original (unedited) variables of the dependent interviewing collected in the first monitoring survey, time stamps of the survey pages (*timepage1*, etc.), as well as a number of technical variables (e.g., *surveyduration*).

The CTC-21-Monitoring-1 data sets (CTC-21-Monitoring-1.* and CTC-21-Monitoring-1-AUX.*) can be merged with the CTC-21-Base data sets (CTC-21-Base.* and CTC-21-Base-AUX.*) by matching the variable *IDperson* and the variable *IDapplication*.

Note that, if people submitted other applications and are also part of the study population of other cohorts, the corresponding administrative data (and survey data) can be found in the data sets of these other cohorts. People are interviewed within the cohort of the year in which they apply for the first time and for which they meet the criteria to be part of the study population (see Section 3.1). However, in the event that they did not (partially) complete the base survey within that cohort, they are interviewed within the next cohort (i.e., the cohort of the year of their next application).

Given the amendments in the questionnaire used for the fall surveys in 2022 we adjusted the data structure for the spring surveys in 2022 so that the variables correspond (for further information see Lüthi et al. (2023a, 2023b)). We also adjusted the structure of the first monitoring survey for CTC-21. In particular, we constructed the variables *gstart1-4*.

⁶Apart from the variable *comments*, which has been removed to preserve anonymity; see the detailed data preparation comments in Section 4.5.

4.2 Linkage with administrative records

Some of the variables in the final data set are based on administrative records that were provided by the SNSF (e.g., information about SNSF career funding). To protect the privacy of the respondents and to guarantee the independence of the CTC data from the SNSF’s administrative processes, identifying information, such as the exact places of residence, is not included in the CTC data. Furthermore, we use a CTC person ID (variable *IDperson*) and a CTC application ID (variable *IDapplication*) that are different from the person ID and application ID maintained by the SNSF administration. The CTC person ID contains eight digits and is randomly assigned, with the first two digits identifying the first cohort which the person is part of. The CTC application ID contains seven digits and is also randomly assigned, with the first two digits identifying the cohort. The variables based on the SNSF administrative records are as follows (# = 1-4).

<i>residence</i>	Place of residence (categorized; see below)
<i>fundingstatus</i>	Status of SNSF grant applied for between 11/2020 and 02/2021
<i>fundingrel</i>	Has relevant grant(s)
<i>gnum</i>	Number of relevant grants
<i>scheme#</i>	Funding scheme of relevant grant#
<i>application#</i>	Application date of relevant grant#

The variables *residence* and *fundingstatus* correspond to the information recorded in the SNSF administrative data in March 2022. The variables *fundingrel*, *gnum*, *scheme#*, and *application#* also refer to this data set or – if the participant submitted an application at a later point in time and received a positive funding decision – to the corresponding SNSF administrative data sets. Please consider that former applicants are not obliged to keep their information up to date in the SNSF administrative data. Consequently, the variable *residence* may not be up to date.

4.3 General data preparation steps

Data preparation was conducted in line with the following general principles (additional details on specific variables can be found in Section 4.5).

- Assign informative missing values (see Section 4.4).
- Create a variable with suffix *_raw* containing the original information if a variable requires editing.
- Check whether filters are consistent, and correct if necessary.
- Examine all “other” text fields and, if possible, assign one of the predefined response categories; delete the open text if assignment is possible.
- Import values from the survey data of the previous survey participated in to the corresponding variable, if information from the previous survey applies to the current situation (for details, see Section 4.5.1).
- Check numerical/date answers (e.g., whether within plausible range).

- Use the first answer if a respondent provided multiple answers (in text fields where this was possible; e.g., countries, institutions).

4.4 Classification of missing values

Missing values have been assigned according to the following classification (exceptions are the time stamp variables and variables derived from information from previous surveys, for which we did not classify the missing values).

Unit-nonresponse:

- .a No invitation

4.5 Details on selected variables

4.5.1 Main data set

IDapplication

The variable *IDapplication* refers to the application submitted shortly before the base survey, and can be identical with one of the variables *IDapplication#*.

fundingrel

The variable *fundingrel* indicates whether a person had a positive funding decision for an SNSF postdoctoral funding scheme and whether this grant is relevant for the survey. Relevant for the survey are those grants that were not withdrawn before the decision date and that were not classified as withdrawn or (prematurely) completed in the previous survey participated in.

gnum

The variable *gnum* contains the number of relevant grants.

IDapplication#, scheme#, application#

The variables *IDapplication#*, *scheme#*, and *application#* contain the CTC application IDs, the names of funding schemes, and the dates of application respectively, and refer to the relevant grants.

status

The participation status was determined as follows. If *highpage* (the highest questionnaire page delivered to the respondent) was missing, *status* was set to 1 (“no participation”). Based on the suggestions given by the “American Association for Public Opinion Research” (AAPOR; American Association for Public Opinion Research, 2016), the value 3 (“complete”) was assigned to all those who answered at least 70% of the applicable questions. For the remaining participants, the participation status was set to 2 (“partially complete”).

residence, ginstitutplace#, gplace, emplplace, phdplace, histplace#, rvisitplace#

To preserve anonymity, country names other than Switzerland were replaced by regions (e.g., Central Europe, Northern America, Africa) based on the Federal Statistical Office (2021); also see file CTC-21-Monitoring-1-Countries.xlsx. *phdplace*: If respondents did not indicate the country in which the PhD was awarded (Question 86), but specified the university, we added the place based on the university information. *rvisitplace#*: For research visits, the places of the institutions were obtained from the institution variables (the institution variable was removed to preserve anonymity).

ginstit#rank, ginstitrank, institrank, phdunirank, rvisitinstitut#rank

The ranks of the institutions were obtained from the “Times Higher Education World University Ranking 2022” (University Rankings, 2022); also see file CTC-21-Monitoring-1-Institutions.xlsx. To preserve anonymity, the names of the institutions were not included in the data, and the ranks were categorized.

ginterrunning

This variable was created before reaching page 41. It contains information on whether respondents had a currently interrupted or running funding scheme. If one of the variables *gstatus1*, *gstatus2*, *gstatus3*, and *gstatus4* had the value 3 “currently interrupted” or 4 “running”, the variable *ginterrunning* was set to 1 “yes”.

grunning

This variable was created before reaching page 41. It contains information on whether respondents had a running funding scheme. If one of the variables *gstatus1*, *gstatus2*, *gstatus3*, and *gstatus4* had the value 4 “running”, the variable *grunning* was set to 1 “yes”.

scheme

This variable was created before reaching page 41. It contains the name of the running scheme (if respondents had a running scheme at the time of the survey). If one of the variables *gstatus1*, *gstatus2*, *gstatus3*, and *gstatus4* had the value 4 “running”, the corresponding scheme from the variable *scheme1*, *scheme2*, *scheme3*, or *scheme4* was taken over.

ginstitrnk

If the name of the host institution indicated in the previous survey participated in applied to the current situation (*sameginstitname* = 1), the ranking was updated with the “Times Higher Education World University Ranking 2022” (University Rankings, 2022).

gplace

If the place where the host institution is located as indicated in the previous survey participated in still applied to the current situation (*samegcntry* = 1), the value was imported from the data set of that previous survey.

ginstit

If the type of host institution indicated in the previous survey participated in still applied to the current situation (*sameginstit* = 1), the value was imported from the data set of that previous survey.

gsector

If the economic sector indicated in the previous survey participated in still applied to the current situation (*samegsector* = 1), the value was imported from the data set of that previous survey.

gposition

If the position indicated in the previous survey participated in still applied to the current situation (*samegsupervis* = 1), the value was imported from the data set of that previous survey.

gsupervis, gsupervisnum

If the supervisory function and the number of subordinates indicated in the previous survey participated in still applied to the current situation (*samegsupervis* = 1), the values were imported from the data set of that previous survey.

gcontract

If the contract information indicated in the previous survey participated in still applied to the current situation (*samegcontract* = 1), the value was imported from the data set of that previous survey.

gworkhreport

If the information regarding reporting working hours to the employer indicated in the previous survey participated in still applied to the current situation (*samegworkhreport* = 1), the value was imported from the data set of that previous survey.

govertime, govertimepay, govertimeno

If the type of overtime compensation indicated in the previous survey participated in still applied to the current situation (*samegovertime* = 1), the values were imported from the data set of that previous survey.

gactivityres, gactivityteach, gactivityadmin, gactivityclin, gactivityoth

Respondents were asked to report percentages for the different activities, summing up to 100%. We rescaled the values if this was not the case (some respondents who were em-

ployed part-time provided answers summing up to their work-time percentage). Furthermore, we recoded missing values to 0 if at least one value was provided.

empl

If the question on the current employment status (Question 49) remained unanswered, *empl* was set to 1 if the subsequent questions indicated that the respondent was employed.

occup

If the occupation indicated in the previous survey participated in still applied to the current situation (*sameoccup* = 1), the value was imported from the data set of that previous survey. To preserve anonymity, only the ISCO-08 code of the occupation was included in the data, but not the original response. The occupations were classified based on the Federal Statistical Office; also see file CTC-21-Monitoring-1-Occupations.xlsx.

profstatus, emplnum

If the professional status and the number of employees indicated in the previous survey participated in applied to the current situation (*sameprofstatus* = 1), the values were imported from the data set of that previous survey.

supervis, supervisnum

If the supervisory function and the number of subordinates indicated in the previous survey participated in applied to the current situation (*samesupervis* = 1), the values were imported from the data set of that previous survey.

budget, budgetnum

If the budget responsibility and the annual budget indicated in the previous survey participated in applied to the current situation (*samebudget* = 1), the values were imported from the data set of that previous survey. *budgetnum*: In the survey, respondents had the possibility of providing budget values in foreign currencies. These values were converted to CHF (and rounded to integers), based on the exchange rates obtained from finanzen.ch (2022) on April 28, 2022. To preserve anonymity, the original responses are not included in the data.

emplplace

If the country of employment indicated in the previous survey participated in applied to the current situation (*sameemplcntry* = 1), the value was imported from the data set of that previous survey.

sector

If the economic sector indicated in the previous survey participated in applied to the current situation (*samesector* = 1), the value was imported from the data set of that previous survey.

contract, contractnum

If the kind of contract – and, in case of a fixed-term contract, the duration of the contract – indicated in the previous survey participated in applied to the current situation (*samecontract* = 1), the values were imported from the data set of that previous survey.

workhreport

If the information regarding reporting working hours to the employer indicated in the previous survey participated in applied to the current situation (*sameworkhreport* = 1), the value was imported from the data set of that previous survey.

overtime, *overtimepay*, *overtimeno*

If the type of overtime compensation indicated in the previous survey participated in still applied to the current situation (*sameovertime* = 1), the values were imported from the data set of that previous survey.

workperc

Total of *workpercmain* and *workpercoth*, if at least one of the variables is non-missing (treating missing as 0 on the other variable).

workpercmain, *workpercoth*

One respondent reported an unrealistic contractual work-time percentage, namely 199% for the primary job. Based on the indicated working hours *workhmain*, the percentage was scaled to 100%.

workh

Total of *workhmain* and *workhoth*, if at least one of the variables is non-missing (treating missing as 0 on the other variable).

workhomespace, *workhomeequip*, *workhomebound*, *workhomeeff*, *workhomedem*

Due to a technical error, Question 71 was not asked in the spring surveys in 2022. Consequently, these variables contain only missing values.

inc

Total of *incmain*, *incloth*, and *incextra*, if at least one of the variables is non-missing (treating missing as 0 on the other variables).

incmain, *incloth*, *incextra*

In the survey, respondents had the possibility of providing income values in foreign currencies. These values were converted to CHF (and rounded to integers) based on exchange rates obtained from finanzen.ch (2022) as of April 28, 2022. Obviously unplausible values were recoded to missing (.i "invalid data"). Compared to previous publications of CTC data, no assumptions were made about income. This means that if data from previous surveys is combined with 2022 data, either the current data must be prepared in the same way as the CTC data prior to 2022, or the raw variables of the CTC data prior to 2022 must be used. An appropriate procedure can then be selected to identify implausible values and transform them if necessary.

fingrantsnsf, *fingrantoth*, *finprojsnsf*, *finnothird*, *finmandate*, *finbusiness*, *finoth*

Respondents were asked to report percentages for the different financial sources of their current research job(s) that sum up to 100%. We rescaled the values if this was not the case (some respondents who were employed part-time provided answers summing up to their

work-time percentage). Furthermore, we recoded missing values to 0 if at least one value was provided.

activityres, activityteach, activityadmin, activityclin, activityoth

Respondents were asked to report percentages for the different activities that summed up to 100%. We rescaled the values if this was not the case (some respondents who were employed part-time provided answers summing up to their work-time percentage). Furthermore, we recoded missing values to 0 if at least one value was provided.

phddomain

The variable *phddomain* contains a categorization of *phddiscipline* into three main research domains according to the SNSF classification; also see the file CTC-21-Monitoring-1-Disciplines.xlsx.

childrennum, child#

If, in the dependent interviewing (Question 116), respondents indicated the same number of children with the same birth years as are already included in the data from previous surveys, the reported information (*childrenbnum, child#*) was not added to the variables *childrennum* and *child#*.

4.5.2 Auxiliary data set

JSbegin

The variable *JSbegin* contains information on whether the participants activated JavaScript at the beginning of the survey or not. Depending on individual filters, the beginning of the survey was on page 1 (*JSpage1*) or on page 56 (*JSpage56*).

missing

The percentage of missing values is defined as the number of valid answers divided by the number of all applicable survey items. We included all relevant numerical survey variables in the calculation.

highpage

Information on the highest survey page provided to the respondent was derived from information in *lastpage* and the *timepage#* variables. *highpage* is equal to *lastpage* if none of the time stamps indicates that a later page was viewed. Otherwise, *highpage* is set to the highest page with a non-missing time stamp.

sdatefield, sdatepart

sdatepart: The variable *sdatepart* corresponds to the month in which the participants (partially) completed the previous survey (i.e. the base survey). The variables *sdatepart* and *sdatefield* are identical in the first monitoring survey.

sgposition

The value was set to missing if the respondents ticked the “other” check-box in the question related to the variable *gposition*.

ssupervis

The value was set to missing if the question related to the variable *supervisnum* was not answered in the previous survey participated in or if invalid data was provided.

scontract

The value was set to missing if the question related to the variable *contractnum* was not answered in the previous survey participated in or if invalid data was provided.

schildren

The value was set to missing if the question related to the variable *childrennum* was not answered in the previous survey participated in or if invalid data was provided.

4.5.3 Removed variables

As described in the detailed descriptions above, some information collected in the survey has been removed or reclassified to preserve anonymity. In addition, the open comment field on the last survey page (variable *comments* in Wilhelmi et al., 2023) has been dropped.

All other open text fields in the survey have been checked manually to ensure that they do not contain identifying information. If this was the case (e.g., specification of country names, institution names), these details were replaced by placeholders (e.g., “Sweden” replaced by “[country]”).

4.6 Data quality

4.6.1 Survey break-offs

34 respondents started the survey but broke off. Table 3 indicates the pages on which these respondents stopped answering the survey. There is no evidence of a particular question causing these break-offs.

Table 3: First page not answered in case of break-off

4.6.2 Item-nonresponse

In general, item-nonresponse was low, with a proportion of missing values below 5% for most variables. Table 4 displays all variables with more than 5% missing values in descending order.

Table 4: Variables with a high proportion of missing values

Some variables, e.g., extra income, have a high level of missing values due to the fact that participants left the field empty instead of writing 0.

4.7 Estimation method for nonresponse weights

As the study rests on a full coverage survey without any sampling, weights accounting for unit-nonresponse should be applied in case unbiased estimates of the study population are required. In the following, we describe the estimated nonresponse weights that can be used in cross-sectional analysis separately for each cohort.

In general, the unit-nonresponse in the CTC base surveys is rather low (approximately 10%), and participation is only slightly selective regarding survey participation (for further information, see Widmer et al., 2019, pp. 13-15, and Widmer et al., 2020, pp. 17-20). Nevertheless, we observe panel attrition in the monitoring surveys. Therefore, we estimated non-response weights based on auxiliary data in the form of administrative information (sampling frame) of the study population (see Section 4.2). All weights are based on frame data only

and are estimated at the person level (variable *IDperson*) rather than at the application level (variable *IDapplication*). Consequently, every person applying for funding for the first time is associated with a nonresponse weight (variable *nonrespweight*).

The nonresponse weights are based on a respondent's probability of participating in the base survey using a logistic regression with prominent background variables (Watson and Wooden, 2009; for example Kroh and Spieß, 2008), which are generally related to sample selectivity (see Widmer et al., 2020, pp. 17-20) and which were available from the sampling frame (frame-only weights). The inverted participation probabilities were then taken as nonresponse weights (Horvitz and Thompson, 1952, pp. 663-685). The following frame data (from the base survey) was used to estimate the nonresponse model: age mean centered (based on year of base survey: year of survey - *birthyr*); gender (*gndr*); funding scheme (scheme at base survey, *schemeappl*); research domain (*domain*); research institution (recoded *institutionplace* into Swiss versus foreign or unknown at the time of the base survey); and interactions between gender, funding scheme, research domain of application, and research institution.

No truncation of the weights was used, as the variance of the weights was low. Furthermore, the nonresponse weight was standardized in the sense that the weights were nominated to the population size ($[\text{weight of an element} / \text{sum of all elements weights}] \times \text{sample size}$; variable *nonrespweight_std*).

Note that respondents who were not surveyed in the present cohort because they were interviewed in another cohort (see cases where the variable *status* is missing .a "No invitation") were treated as if they had not applied for a funding scheme (i.e., the population was restricted to first-time study participants). Hence, in case data sets of different cohorts will be merged, new nonresponse weights might need to be estimated based on the resulting population distributions. In addition, we recommend that longitudinal analysis should use multiple imputation for nonresponse adjustments (a multiplication of the weights from different waves would violate the assumption of independent participation, as the dropout pattern is not monotone).

In general, specification problems of the weights cannot be ruled out since the models were constructed using a pragmatic approach that only included attributes from the sampling frame. Therefore, the impact of the design weights on the estimates should be evaluated for each analysis. Depending on the analysis aim, individual weighting factors will need to be considered.

Generally, when one wants to estimate inferences, using (standardized) weights might be considered. We recommend using the standardized weights, in case one wants to estimate (basic) inferences or (relative) distributions of survey variables. As weights are standardized by each wave, one should use the unstandardized weights in case waves are aggregated.

A.1 Mailings

Invitation email sent on April 28, 2022

Invitation to participate in the follow-up survey of the Career Tracker Cohorts (CTC)

Dear <first name> <last name>,

You applied for an SNSF career funding scheme in the past and you are therefore part of the Career Tracker Cohorts study. This study is conducted by the University of Bern on behalf of the SNSF. The goal of the study is to gain a better understanding of the career paths of (former) researchers and of the impact of SNSF career funding. To that purpose, everyone who applied for an SNSF career funding scheme at the postdoctoral level is invited to take part in brief yearly surveys. You took part in at least one of these surveys in the past, and we would like to keep track of your work situation and your personal life situation.

We kindly ask you to participate in this follow-up survey. Completing the survey will take about 15 minutes. Your data will be treated with strict confidentiality. The results of the study will be published anonymously so that the respondents cannot be identified.

To participate in the survey, please click the following link:

Invitation to participate in the follow-up survey of the Career Tracker Cohorts (CTC)

Dear <first name> <last name>,

You applied for an SNSF career funding scheme in the past and you are therefore part of the Career Tracker Cohorts study. This study is conducted by the University of Bern on behalf of the SNSF. The goal of the study is to gain a better understanding of the career paths of (former) researchers and of the impact of SNSF career funding. To that purpose, everyone who applied for an SNSF career funding scheme at the postdoctoral level is invited to take part in brief yearly surveys. You took part in these surveys in the past, and we would like to keep track of your work situation and your personal life situation.

We kindly ask you to participate in the first follow-up survey. Completing the survey will take about 15 minutes. Your data will be treated with strict confidentiality. The results of the study will be published anonymously so that the respondents cannot be identified.

To participate in the survey, please access the website indicated below or use the QR code.

Thank you and reminder email by the SNSF (second reminder) sent on May 11, 2022

Dear Sir or Madam

You have recently received an invitation to participate in the follow-up survey of the Career Tracker Cohorts study, and many of you have already done so. We thank you very much for your participation!

It is very important that all (former) SNSF grantees participate in this follow-up survey so that the results of the study are representative and the SNSF funding schemes can be improved and adapted to the needs of the research community.

We therefore kindly ask those of you who have not yet completed the survey to do so. Unless you have already participated, you will shortly receive another email with your personal link from the project team of the University of Bern. If you do not receive such a link, please check your spam folder or contact the project team at info@careertrackercohorts.ch.

Your participation in the Career Tracker Cohort study is unrelated to any evaluation and administrative procedures. Your data will be treated with strict confidentiality.

To keep up to date with the project, you can visit the website www.careertrackercohorts.ch. Results of the study are published there at a regular basis.

Thank you very much for your valuable participation. Sincerely,

Final reminder to participate in the follow-up survey of the Career Tracker Cohorts (CTC)

Dear <first name> <last name>,

This is the last reminder to participate in the follow-up survey of the Career Tracker Cohorts study. We kindly ask you to complete the survey by **Friday, June 3, 2022**. It will take about 15 minutes.

It is essential that everyone who applied for an SNSF career funding scheme takes part in the study, irrespective of whether the funding decision was positive or not. Only then can the career paths of applicants be represented accurately and the SNSF can optimize its career funding schemes.

To participate in the survey, please click the following link:

A.2 Screenshots of the questionnaire

The following screenshots display previews of the questionnaire pages; see the attached notes for information on filters and dynamic elements. The notes also list the variables in the data set corresponding to the page. Furthermore, the source is given for questions that were adopted from other studies. The first ten screenshots display the questions for the relevant grants. An interviewee can have up to four relevant grants. Hence, in the survey, these questions are repeated as many times as indicated in the variable *gnum*. In the following section, one generic loop is displayed for the four possible loops.
