Prof. Gerhard Schroth took over the post of director at the Bern Neuroradiology Institute from his predecessor Prof. Peter Huber on April 1, 1992.

After almost 22 years, Gerhard Schroth now hands over his office to Prof. Jan Gralla, with effect from February 1, 2014. In recognition of his service, physicians currently working at the institute have dedicated the publications from their specialist fields appearing in this issue of *Clinical Neuroradiology* to Gerhard Schroth:

- Neuroimaging of epilepsy: lesions, networks, oscillations
E. Abela, C. Rummel, M. Hauf, C. Weisstanner, K. Schindler, R. Wiest
- Stent-retriever thrombectomy—impact on the future of interventional stroke treatment
P. Mordasini, C. Zubler, K. W.-V. Hsieh, P. Kiat Chan, J. Gralla

- Dose reduction in standard head CT: first results from a new scanner using iterative reconstruction and a new detector type in comparison to two previous generations of multi-slice CT

C. Ozdoba, J. Slotboom, G. Schroth, S. Ulzheimer, R. Kottke, H. Watzal, C. Weisstanner

A detailed tribute to Prof. Schroth can also be found in this issue (see Societies Communications).
