- Galileo mission status
- The IGS MGEX network
- MGEX Galileo products
 - Products availability
 - AC processing strategies
- MGEX Galileo product validation
 - Orbit validation
 - Clock validation
- Summary and outlook

- Four Galileo In-Orbit Validation (IOV) satellites in orbit
 - E11 and E12 launched in October 2011
 - E19 and E20 launched in October 2012
- First FOC satellite dual launch planned for August 2014

The IGS MGEX Network

<ftp://cddis.gsfc.nasa.gov/pub/gps/data/campaign/mgex/>
<http://mgex.igs-ip.net/>

- Nearly all MGEX stations are tracking Galileo

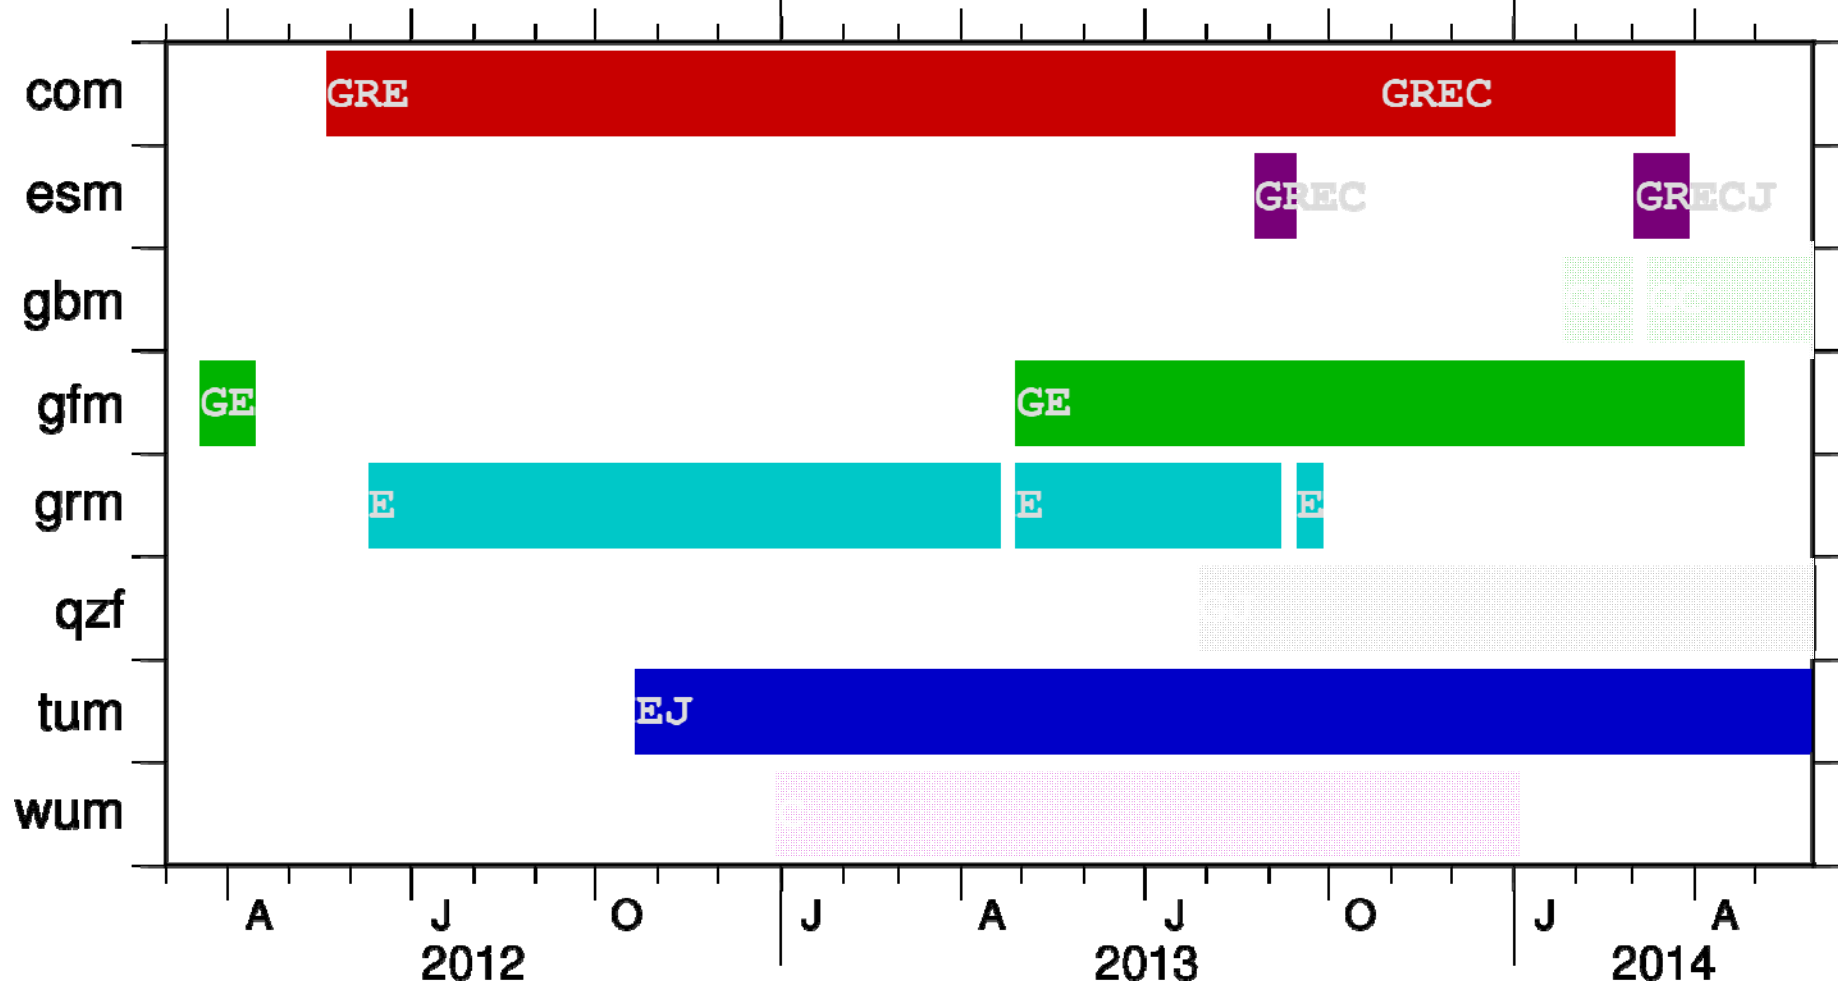

MGEX products availability

Status: 15-June-2014

Satellite system IDs according to the content of the precise orbit files at <ftp://cddis.gsfc.nasa.gov/pub/gps/products/mgex/>

MGEX Galileo products availability

Status: 15-June-2014

Satellite system IDs according to the content of the precise orbit files at <ftp://cddis.gsfc.nasa.gov/pub/gps/products/mgex/>

MGEX Galileo analysis centers

Institution	Software	Diff. LVL	Phase center	Arc- length	CLK sampling
CNES/CLS (GRM)	CNES POD GINS	zero	MGEX	30 h	15 min
CODE (COM)	Bernese 5.3	double (orbit) zero (clock)	ESA	3 d	5 min
ESOC (ESM)	NAPEOS	zero	ESA	1 d	5 min
GFZ (GFM)	EPOS.P8	zero	ESA	3 d	5 min
TUM (TUM)	Bernese 5.0	zero	MGEX	3 d	15 min

„MGEX data analysis at CODE – current status“, Prange et al., presented at the EGU 2013, Vienna:

- Validation of COM, TUM, GRM orbits for different time intervals in 2012 (long arc fit and SLR residuals)

„Quality assessment of Galileo Orbit and Clock Products of the IGS Multi-GNSS Experiment (MGEX)“, Steigenberger et al., presented at the AGU 2013, San Francisco

and

„Galileo Orbit and Clock Quality of the IGS Multi-GNSS Experiment“, Steigenberger et al. (2014), accepted for publication in Advances in Space Research:

- Overview, description, validation of MGEX Galileo orbit and clock products
- Validation time interval: 20 weeks from 28 April till 14 September 2013 (day of year 118 – 257/2013, GPS week 1738 – 1757)

=> validation results presented here again (see following slides)

Orbit validation

Day boundary discontinuities

- 3D position difference between consecutive days at midnight

2-day orbit fit RMS

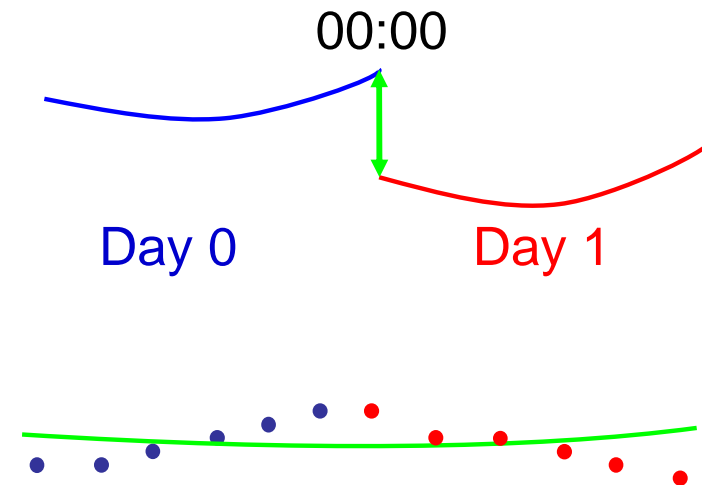

- 2-day orbit fitted through positions of 2 consecutive days
- 3D RMS of 2-day arc w.r.t. original orbits

Satellite Laser Ranging residuals

- Independent optic technique

Orbit comparisons

- Differences between two ACs in radial, along-track, cross-track direction

Common time period considered, median values given in **cm**

	Satellite	COM	GFM	GRM	TUM
Day Boundary Discontinuities	E11	4.4	8.1	20.9	5.8
	E12	4.7	8.0	20.7	6.7
	E19	4.8	8.9	28.0	6.3
	E20	4.7	8.5	22.1	6.1
	Satellite	COM	GFM	GRM	TUM
2-day Orbit Fit RMS	E11	1.4	2.7	6.6	1.3
	E12	1.4	2.7	6.4	1.5
	E19	1.5	2.9	6.4	1.5
	E20	1.5	3.0	6.7	1.6

Orbit validation with SLR

Elevation of the Sun above the orbital plane

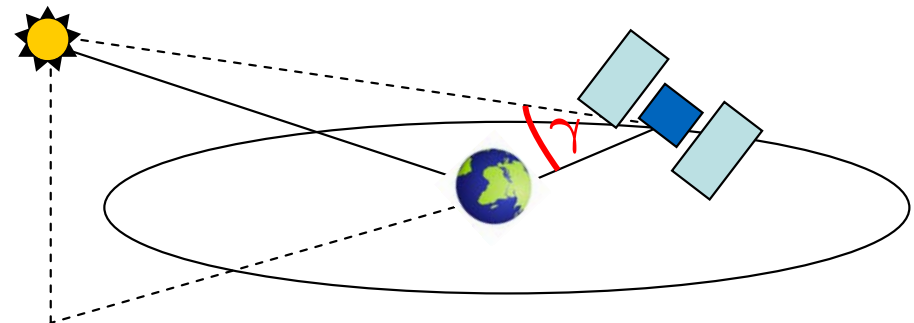

Satellite	Bias [cm]	STD [cm]
E11	-5.2	8.4
E12	-5.9	8.1

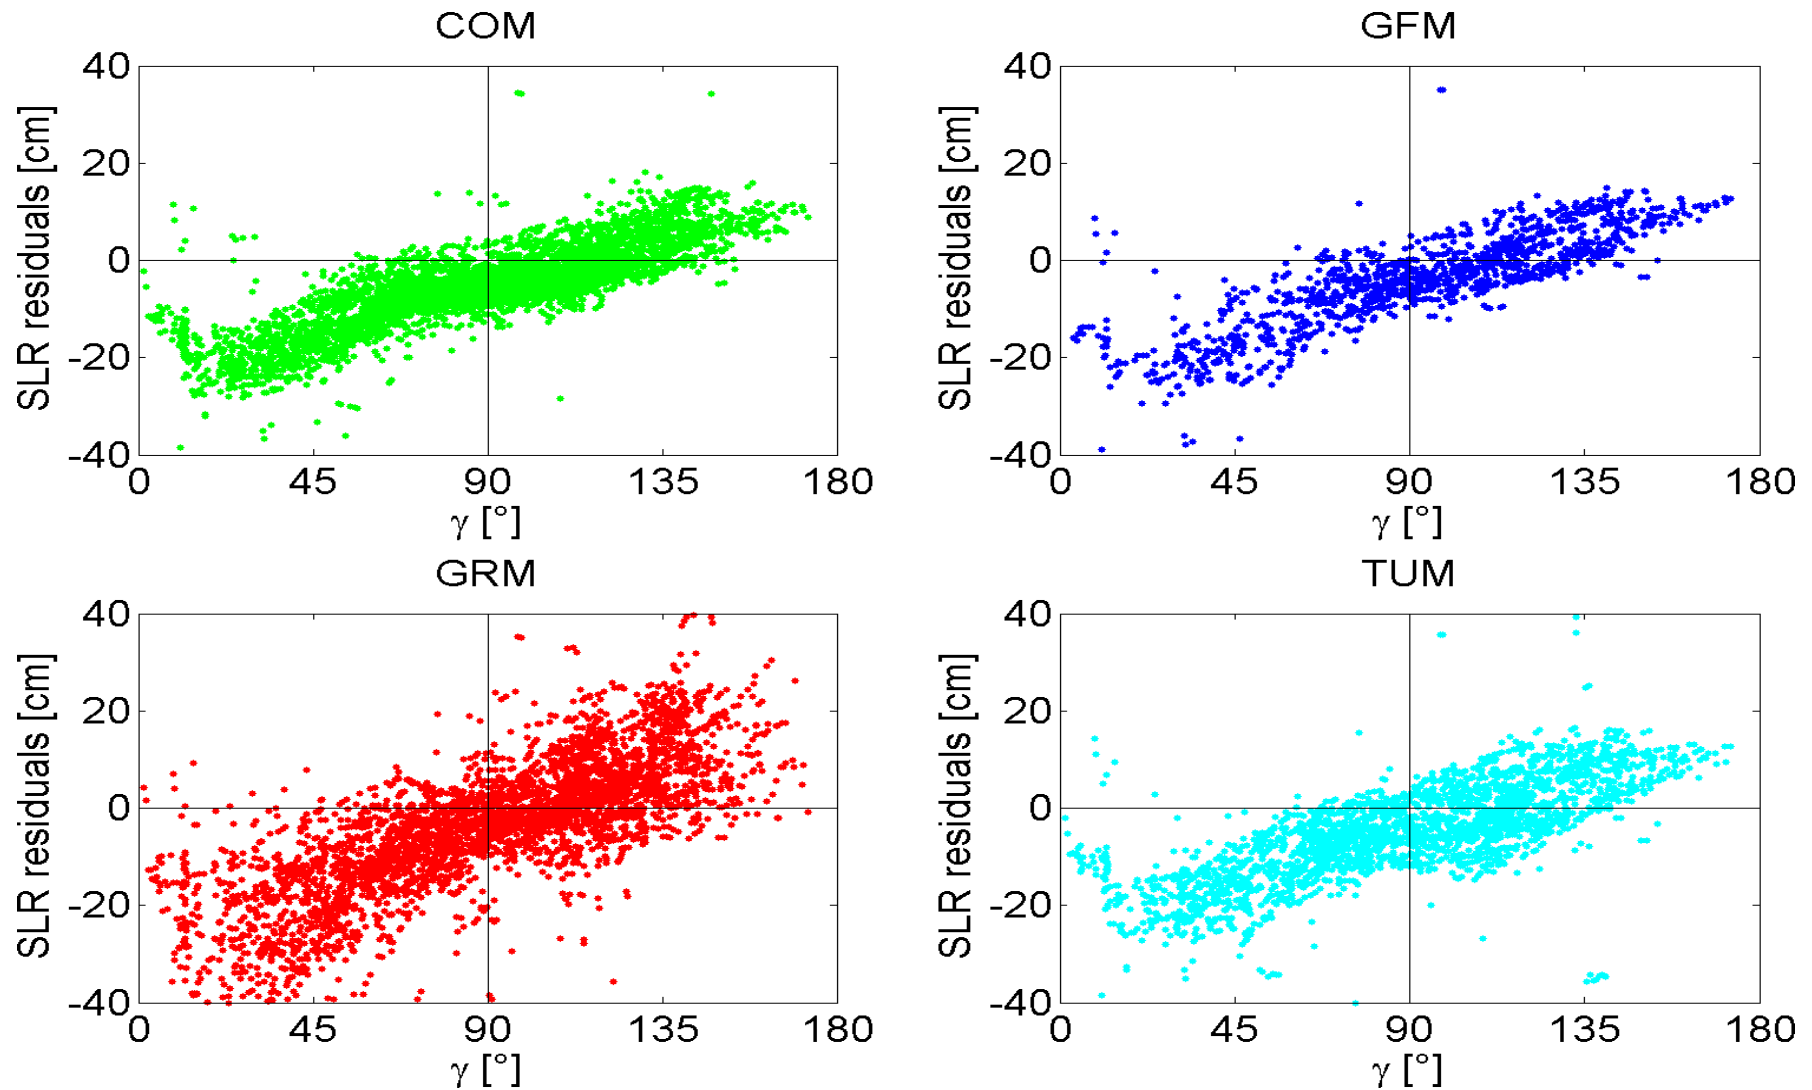

Orbit validation with SLR

Elevation of the Sun above the orbital plane

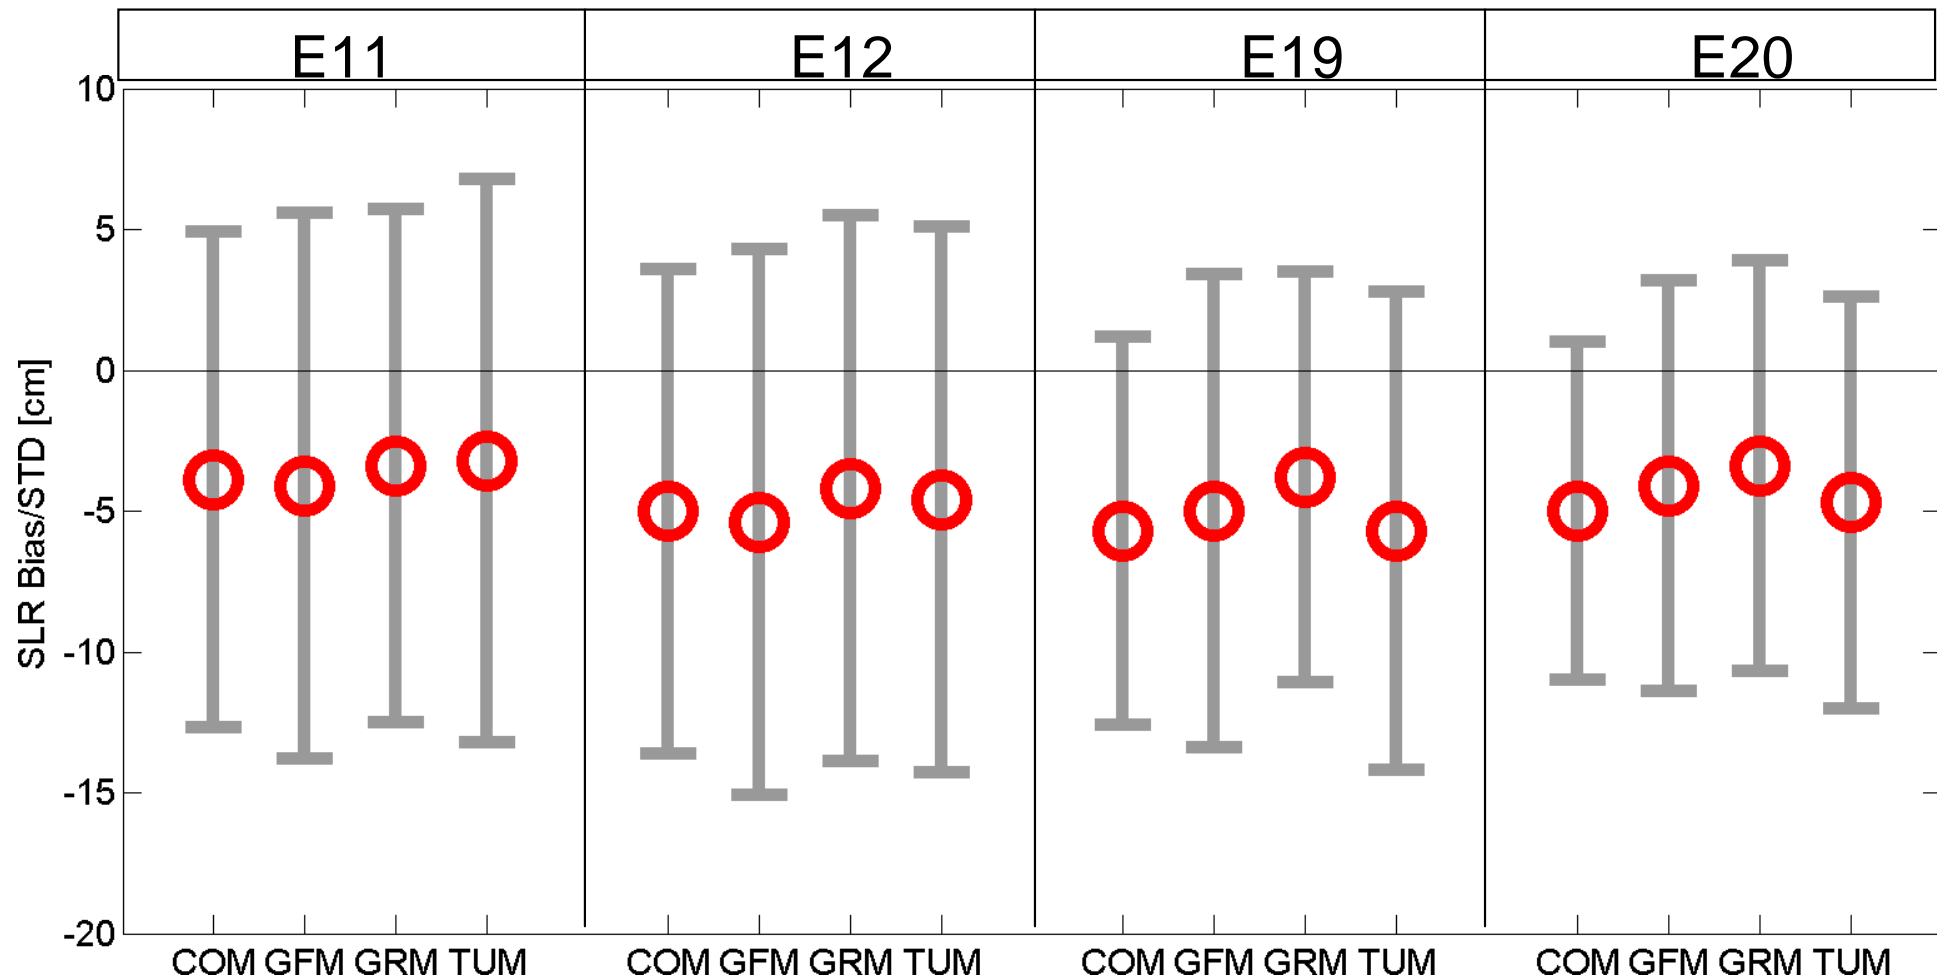

SLR Residuals vs. Earth-Satellite-Sun Angle: E11

Orbit validation with SLR

Mean bias and standard deviation (STD) of SLR residuals

Orbit differences between ACs for E11

COM vs. GFM

Mean: -0.00 m STD: 0.03 m

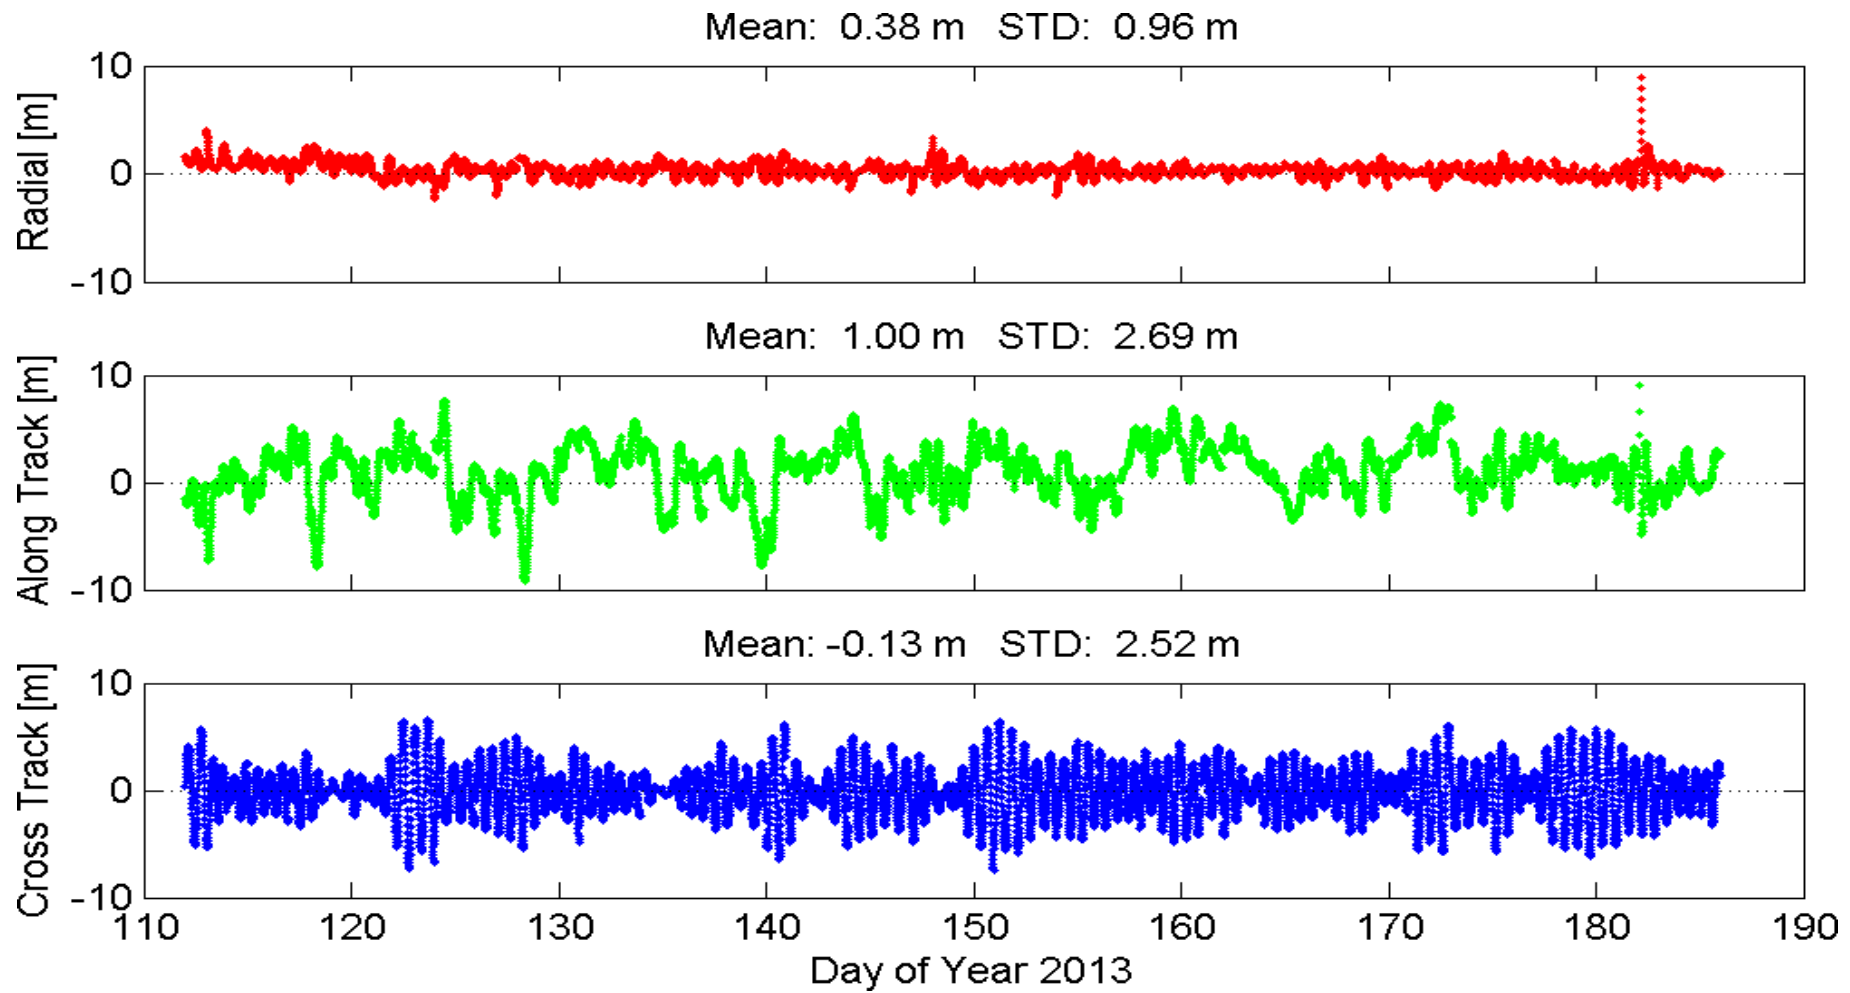

COM vs. GRM

Mean: -0.02 m STD: 0.10 m

Orbit Comparison E11: Broadcast vs. TUM

SLR Validation of Galileo Broadcast Orbits

	E11	E12	E19	E20
Offset [cm]	36.8	39.4	32.1	25.8
STD [cm]	94.0	88.2	101.6	113.2
RMS [cm]	100.9	96.5	106.5	116.0

Time period:
DOY 1 - 300/2013

Outlier limit: 5 m

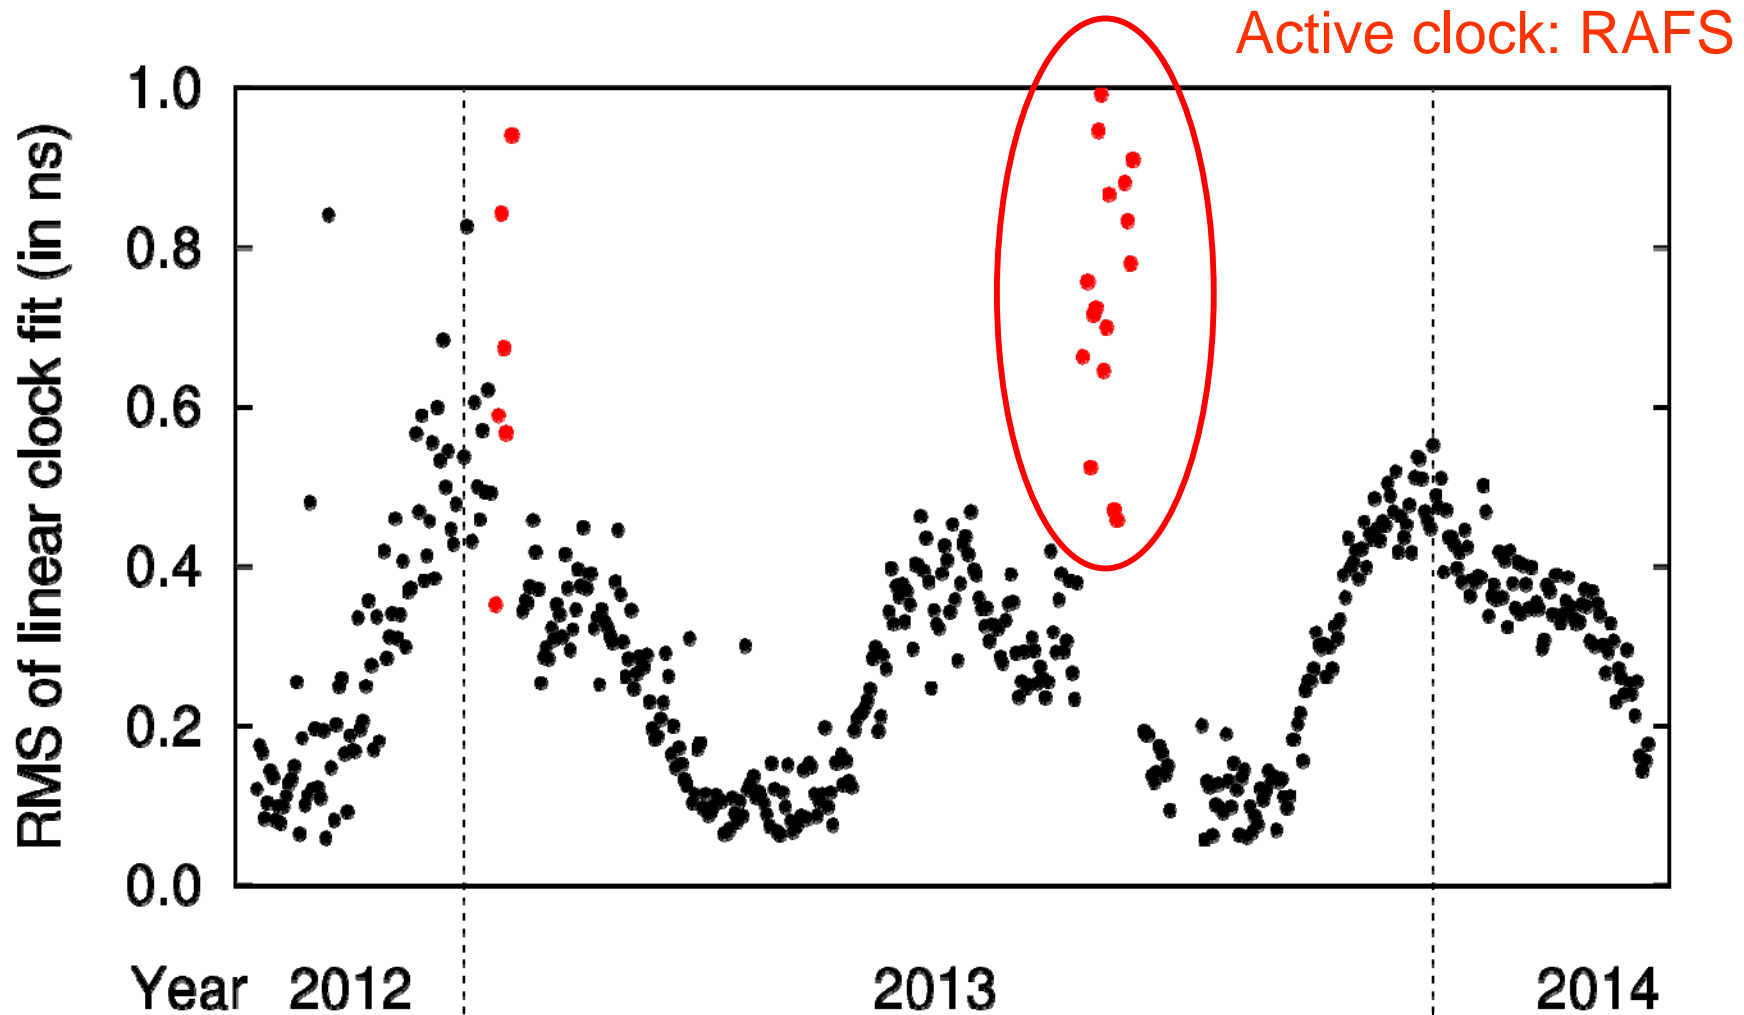

Nominal satellite
antenna offsets

Clock validation

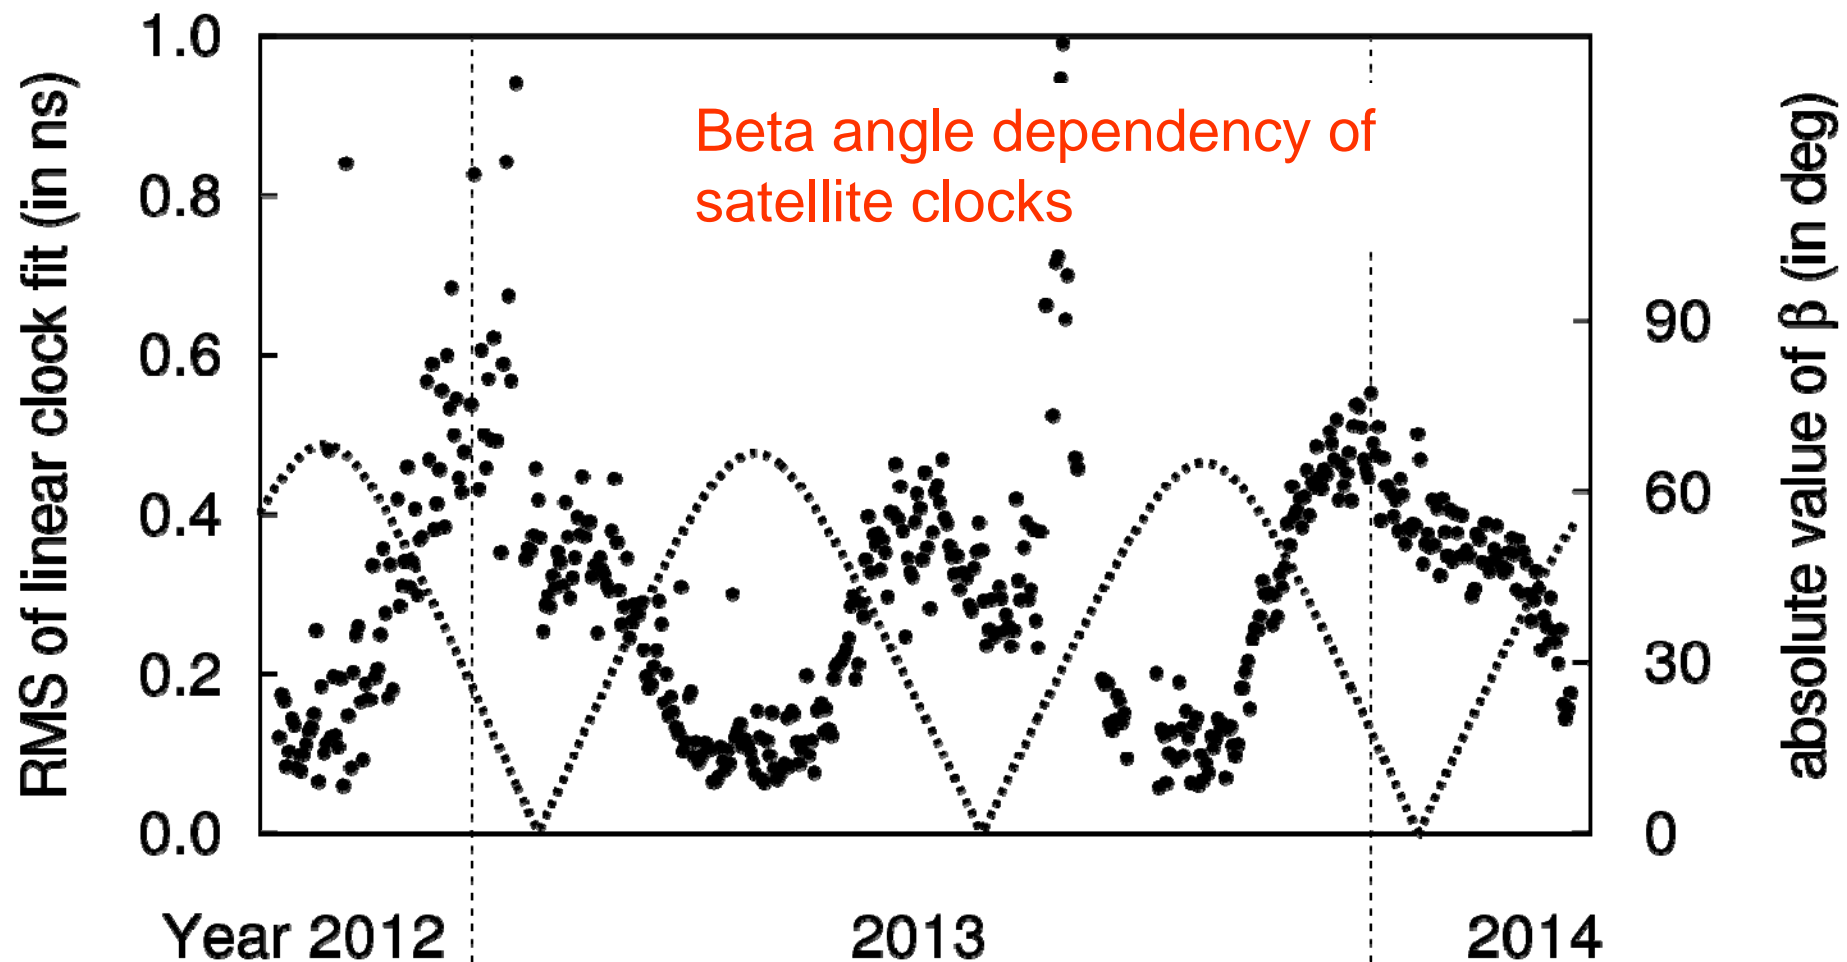

Linear fit of COM clock estimates for E12

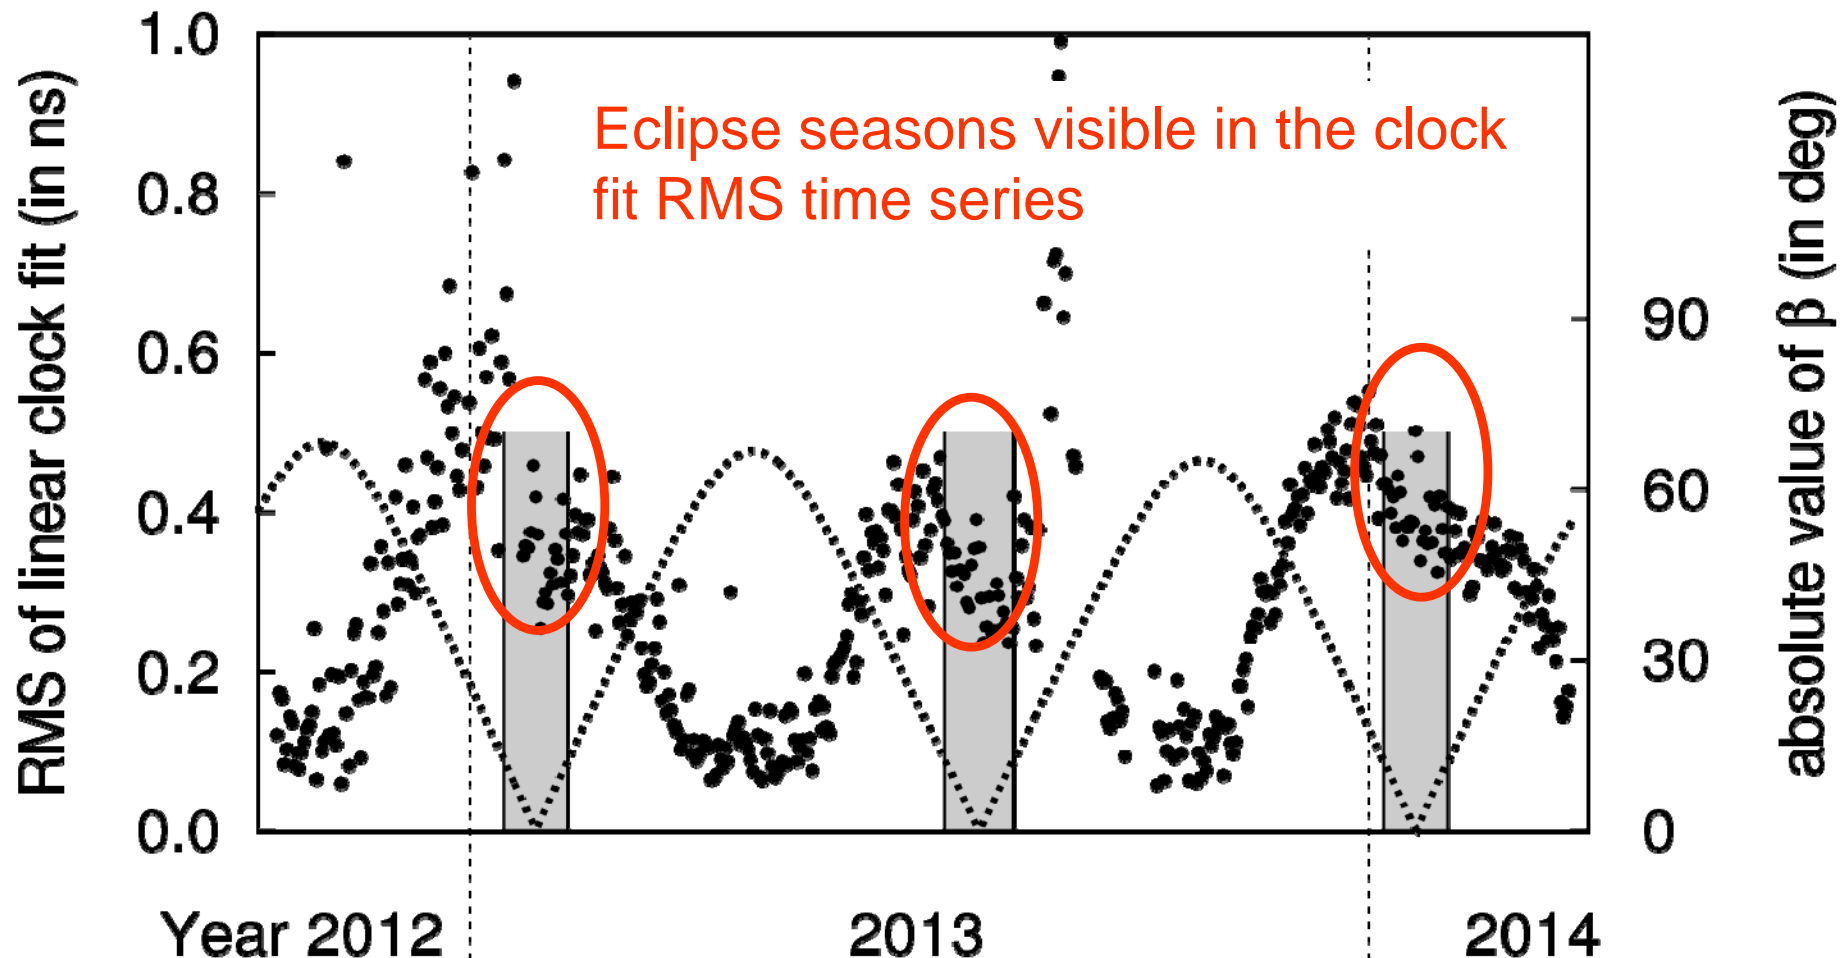

Linear fit of COM clock estimates for E12

Linear fit of COM clock estimates, elevation of the Sun above the orbital plane for E12

Linear fit of COM clock estimates, elevation of the Sun above the orbital plane, and eclipse seasons for E12

Clock validation

Median
Allan deviations of
Galileo PHM clocks
from 7 days of data
(GPS week 1738;
DOY 13/118 - 124)

COM
GFM
GRM
TUM

Clock validation

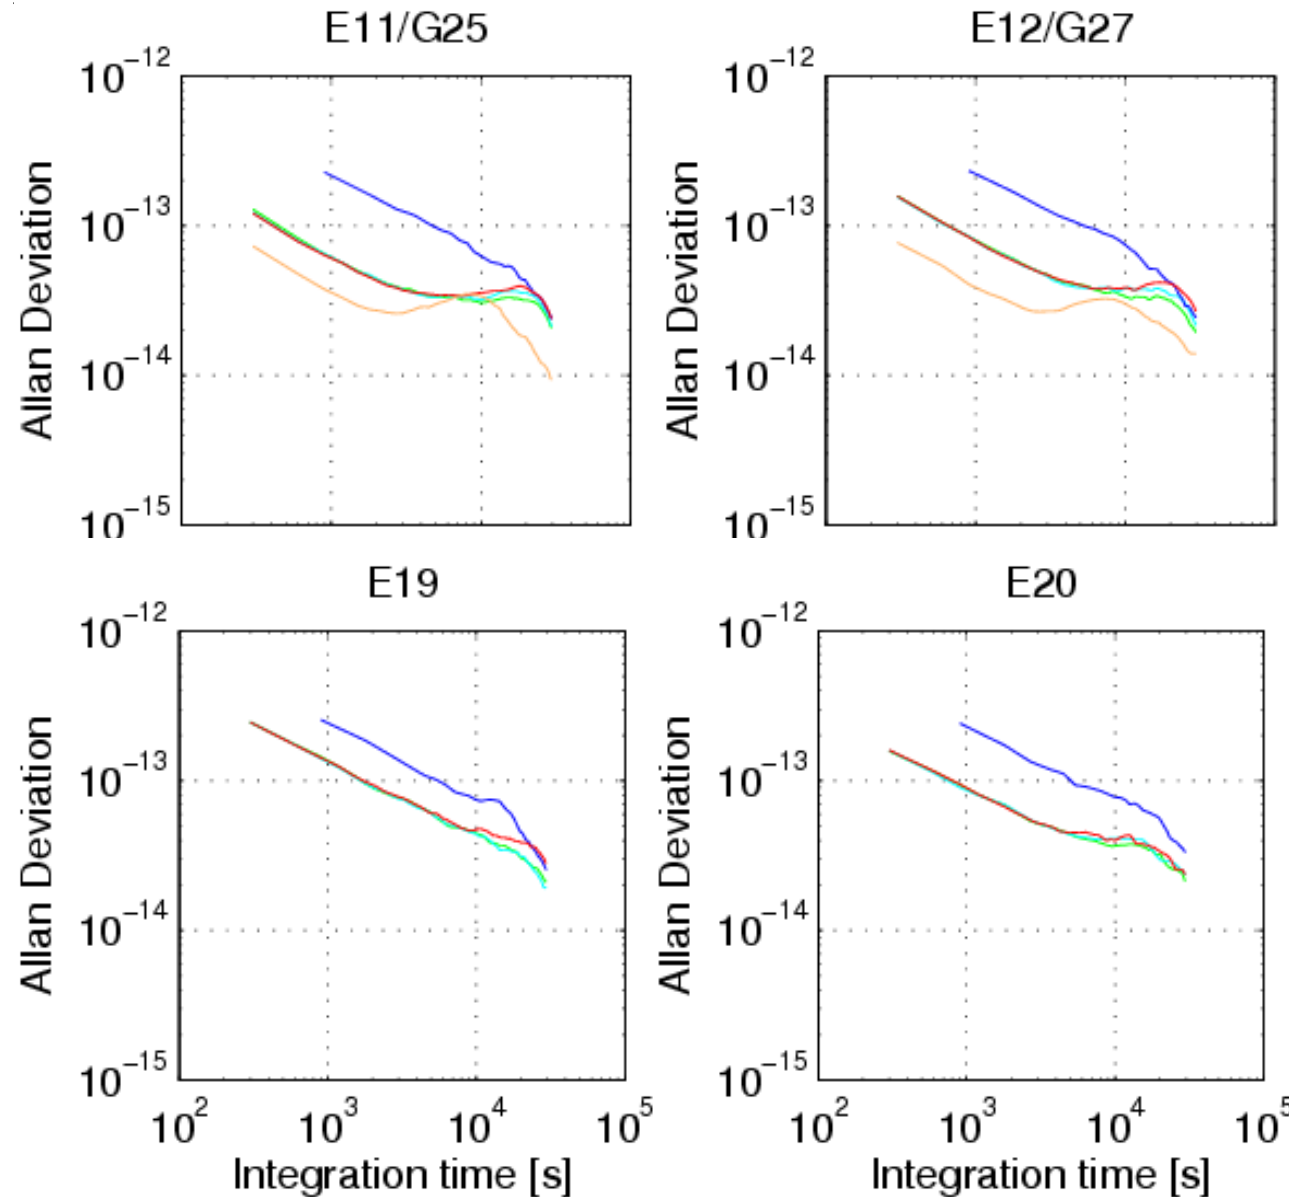

Median
Allan deviations of
Galileo PHM clocks
from 7 days of data
(GPS week 1750;
DOY 13/202 - 208)

COM
GFM
GRM
TUM

Clock validation

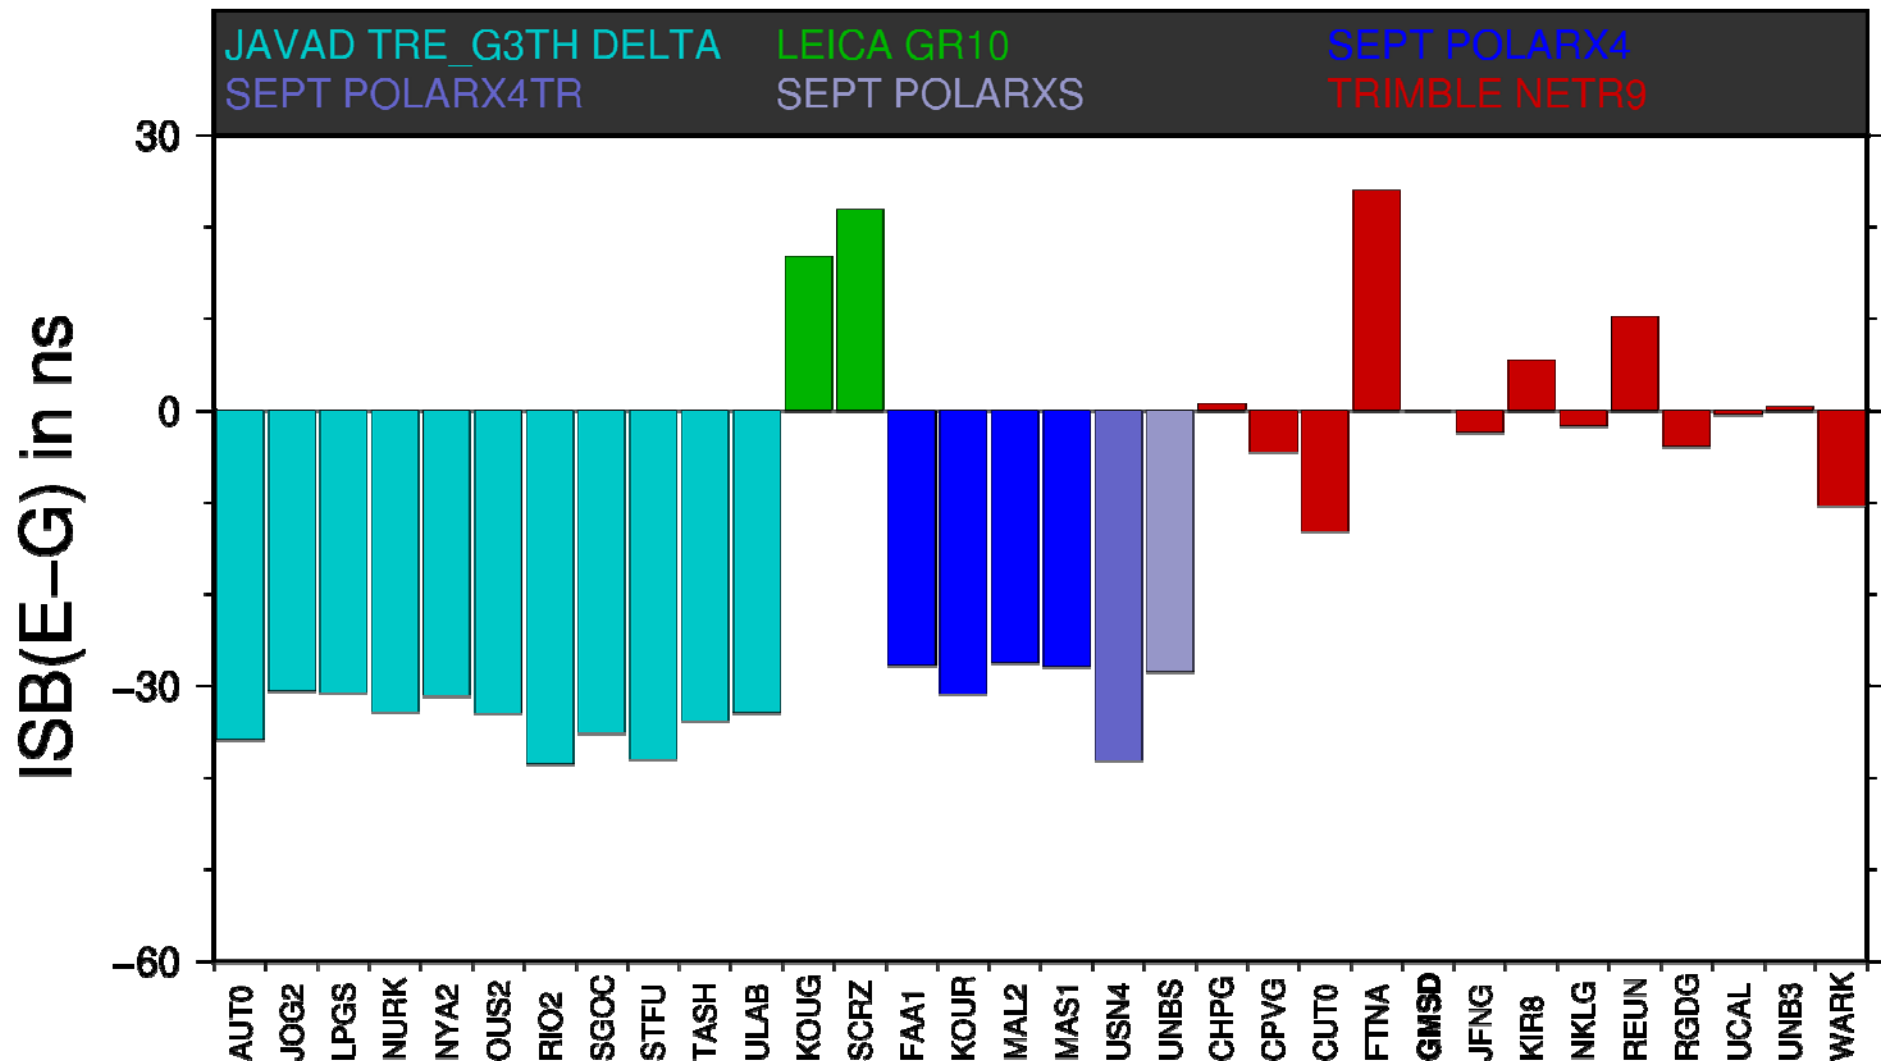

Median
Allan deviations of
Galileo RAFS clocks
from 3 weeks of data
(GPS weeks
1754 – 1757;
DOYs 13/234 - 254)

COM
GFM
GRM
TUM
GPS IIF

Biases

Galileo-GPS ISB for COM solution (frequencies: L1+L2 GPS, L1+L5 GAL)

Summary and outlook

- MGEX Galileo products with different features available (**short latency**: TUM; **all GNSS** included: ESM; **long time series**: COM, GFM, TUM, GRM)
- **Precision** of Galileo MGEX products is generally **below the one decimeter level**
- **Radial accuracy** as evaluated by SLR is at the **one decimeter level** with a systematic **bias of about 5 cm**
- Galileo **Broadcast orbits** have a **meter level accuracy**
- **Systematic effects** visible in orbits and clocks of **all ACs** due to orbit modeling problems (radiation pressure)
- **Modeling deficiencies** due to lack of knowledge about the satellites:
 - Satellite antenna phase center offsets and variations
 - Attitude behavior, satellite dimensions, and surface properties
