1 Description of the study

1.1 General description and principal investigators

The present Swiss dataset on "Work Orientations" is part of an extensive survey carried out within the joint project "Future of Working Life" of the Department of Sociology and the Institute of Political Science of the University of Berne. The joint project consists of two project segments and is financed by the Swiss National Science Foundation. It is part of the Swiss Priority Programme (SPP) "Switzerland: Towards the Future".

The 1997 ISSP Module on "Work Orientations" was implemented as part of the sociological project segment "Working Conditions, Work Orientation and Labor Market Participation" and, therefore, the project group of the Dept. of Sociology is responsible for it. Prof. Dr. Andreas Diekmann leads the project group; his assistants are Dr. Henriette Engelhardt (formerly University of Berne, presently Max Planck Institute for Human Development, Berlin) and Lic.rer.soc Ben Jann.

The ISSP standard background variables are being used additionally for a partial replication of the 1996 ISSP Module on "Role of Government" within the political project segment "Sociopolitical orientations of employees. Alignments, membership in and hostility to interest organizations and political parties". This project segment is lead by Prof. Dr. Klaus Armingeon, who is assisted by Simon Geissbühler (both members of the Institute of Political Science).

The fieldwork was done by the LINK Institute, Luzern.

1.2 Fieldwork methods

The survey consisted of a standardized computer aided telephone interview (CATI) with an average duration of 40 minutes and a standardized written follow-up questionnaire. The telephone interview took place between May and October 1998. After the telephone interview the participants received the written questionnaire including a small gift (a telephone card worth CHF 10.–) by mail. If a questionnaire was not returned within two weeks, a reminding letter including another questionnaire was sent.

To verify the authenticity of the written questionnaires, i.e. that the person interviewed via telephone was identical with the person completing the written questionnaire, a number of variables (like sex and age) were included in both interviews (besides an identifying code).

1.3 Language

The telephone interview and the written questionnaire were carried out in German, French or Italian, depending on the respondents mother language.

1.4 Context of ISSP questions

The ISSP questions on "Work Orientations" were part of the written questionnaire (except variable V75). They were placed in their original order behind a number of questions on other subjects (mainly questions taken from the 1996 ISSP module on the "Role of Government"). The questions use the original ISSP wording translated to German, French and Italian. The translations are based on the English original and the version used in Germany by ZUMA. Since the main goal was to ensure consistency between the three Swiss versions, compatibility to the translations used in France and Italy can not be guaranteed.

The ISSP standard background variables were mainly part of the telephone interview. Detailed information can be found in section 5 next to the frequency tables of the variables.

A problem arises because of the separation of the two ISSP parts: information is missing for a couple of background variables if someone was employed at the time of the telephone interview but not any more while completing the written questionnaire (or the other way round).

1.5 Fieldwork dates

The interviewing by telephone started on May 11th 1998 and ended on October 19th 1998. The written questionnaires were collected until 9th of November 1998.

2 Sample

2.1 Sample type and size

The survey population consists of all German, French or Italian speaking people aged between 18 and 70 who are permanently living in Switzerland in the year 1998.

The final sample was determined by a two level selection process. First, a random sample of 6700 households was drawn from the official telephone register.¹ Second, the household structure was examined via telephone for each selected household and one member drawn by random computer process.

People living in a household without telephone (or with only a cellular phone) could not be reached. Considering the very high telephone density in Switzerland this does not reduce the representativeness of the sample by much.²

2.2 Response rates

Table 1 shows a 52.4% response rate for the written questionnaire (2518 cases). It has to be taken into account that the written interview had to be filled in after being interviewed by telephone for 40 minutes. This probably reduced some people's readiness to complete the questionnaire. Secondly, only people previously interviewed by telephone were able to receive the written questionnaire at all. The response rate for the telephone interview amounts to 63.0% (3028 interviews (D+H.2)). 83.2% of the people who were interviewed by telephone also participated in the written questionnaire.

26.4% refused to be interviewed by telephone for various reasons. On the second level, 4.4% of the participants actively refused to receive or fill in the written questionnaire (H.21) while another 11.2% simply did not send it back (H.23). In a few obvious cases a different household member completed the questionnaire (H.22).

2.3 Known systematic properties

There are two known systematic properties of the sample:

(a) People living in a household without or only with a cellular phone are not covered by the sample.

(b) The smaller the number of household members who meet the criteria of the survey population, the bigger the chance of each member to get into the sample. This results in an overcoverage of people living in small households – the sample is *household representative*. In order to get a *personal representative* sample, weighting has to be applied (see next section).

In addition one should remember that the survey population is limited in age (18 to 70) and only people able to communicate in German, French and Italian were interviewed.

Table 1: Response rates

A. Total issued	6700	
B. Ineligible	1895	
B.1 Wrong age (<18, > 70)	778	
B.2 Address vacant	401	
B.3 Business address	242	
B.4 Language problems (does not speak G, F, or I)	228	
B.5 Other ineligible	246	
C. Total eligible	4805	100.0%
D. Total ISSP questionnaires received	2518	52.4%
E. Total non-response	2287	47.6%
F. Refusals	1270	26.4%
F.1 No interest	454	9.5%
F.2 No time	228	4.7%
F.3 Against questionings	348	7.2%
F.4 Other refusals	240	5.0%
G. Non-contacted	204	4.2%
G.1 Unreachable	116	2.4%
G.2 Other non-contacted	88	1.8%
H. Other non-response	813	16.9%
H.1 Health problems	106	2.2%
H.2 No participation in the written questionnaire	510	10.6%
H.21 Active refusal	132	2.7%
H.22 Different respondent	24	0.5%
H.23 Questionnaire not returned	340	7.1%
H.24 Other	14	0.3%
H.3 Other non-response	197	4.1%

3 Weighting

As mentioned above the two level selection process results in a household representative sample.

In order to receive a personal representative sample the original data has to be weighted by the number of household members m_i who are part of the survey population. The weight can be normalized, so the original number of cases *n* stays the same. The variable WEIGHT was computed as follows:

WEIGHT =
$$m_i \cdot \frac{n}{\sum_{i=1}^{n} m_i}$$
 for all $i = 1, ..., n$

One is free to use it, but there's no absolute need to do so. Whether to apply weighting or not depends a great deal on the research question.

¹ The register covers all lines of the steady telephone net in 1997. Mobile phones are not included. Since the fieldwork was done in 1998, some addresses were vacant (people who moved). If determinable, the new addresses were used in these cases.

² According to Swisscom, 3.739 million non-business telephone lines existed in 1998 (analogue or digital, cellular phones excluded; digital lines feature multiple numbers and several simultaneous connections), while the number of households amounted to approximately 3 million. A new population segment may gain importance, though: people who gave up their conventional telephone line in favor of only a mobile phone.

4 Characteristics of the Swiss population

In 1998, approximately 7.1 million people were steadily living in Switzerland. Table 2 and 3 show different characteristics of the Swiss population. Comparing the Swiss gender distribution with the one of our sample we notice a small overrepresentation of female respondents (2.1 percent points; table 2). If WEIGHT is applied, though, the sample distribution gets reasonably close to the overall Swiss distribution. However, male and female people are not equally distributed over the different age cohorts. If we only look at people meeting the age criterion of the survey population, again the sample is slightly off – even if weighted.

The unweighted ISSP sample contains to many old (60-69) and not enough young people (20-29). Again the deviations are fairly small.

Table 2: Gender and age group distributions in percent

	Official	data ^a	ISSP samp	ole (1998)
	(31.12.	1997)	unweighted	weighted
Gender		age	es 18 through 69	only

Employed people are slightly underrepresented (table 3).

According to the distribution of education levels in table 4 the ISSP sample contains too many people with completed secondary school (especially the 10.5 years of schooling group), but not enough who have no degree or who completed only the compulsory school level.

Total		2518	100.0							

The variable V75 was part of the telephone interview. There were a few more categories: 1 was split into "Pension, private" and "Pension, state"; 4 was split to "Parents" and "Other family members"; 7 was split to "Income from interest, rent", "Scholarship" and "Other source". There also was a category "Own income" because the question was asked of all respondents and not only of unemployed.

Employed people were subsequently set to 0 "Not applicable". People being employed by the time of the telephone interview but not anymore while filling in the written questionnaire were recoded to 9 "No answer".

The variable EDUCYRS shows the average duration of the education levels in CH_EDUC (the recode scheme is: 3=9.00; 4=9.75; 5=10.50; 6=12.00; 7=12.00; 8=11.50; 9=12.50; 10=10.00; 11=12.00; 12=12.50; 13=15.00; 14=17.50; 15=9.00). Some levels contain schooling and vocational training. In these cases only schooling was taken into account. There is no information about code 96 "Still at College/University". Code 95 "Still at school" exclusively consists of people still at compulsory. People without formal schooling are coded to 0 "NAV".

DEGREE R: Education II: categories

		FIE	FUL	varru	CumPCi

	Total	2517	100.0	100.0	
Missing	99 NA	1	.0		
Total		2518	100.0		

The variable DEGREE is a recoding of CH_EDUC. The recode scheme is: 1=1; 2=2; 3 and 15=3; 4, 5, 6, 7, 8, 9, and 10=5; 11, 12, 13, and 14=7. There is no information available on 4 "Incomplete secondary" and 6 "University incomplete". Code 7 should rather be interpreted as "Tertiary level", since the education categories 10 and 11 of variable CH_EDUC are not officially counted as "University level" in Switzerland (even though they're above secondary level).

The variable CH_EDUC was part of the telephone interview. It shows the highest education level reached. The labels contain the original German wording. They can be translated to 1 "No formal schooling", 2 "Still at compulsory", 3 "Compulsory completed", 4 "Basic training (in school and vocational)", 5 "Apprenticeship (in school and vocational)", 6 "Fulltime vocational school", 7 "Vocational high school degree", 8 "General education school", 9 "High school; teacher training school", 10 "1 to 2 year trading school; 1 year household school", 11 "Higher vocational proficiency (master craftsman); higher federal certificate of proficiency", 12 "Higher technical college", 13 "Higher specialized college", 14 "University" and 15 "Other education".

Figure 1 shows a simplified overview of the Swiss school system.

4) Basic training (in school and vocational)

7) Vocational high school degree (addition to apprenticeship / vocational school) 8) General education school / 1 to 2 year trading school; 1 year household school 11) Higher vocational proficiency (master craftsman); higher federal certificate of proficiency

Figure 1: Swiss school system (simplification)

The variable WRKST is composed of three questions of the telephone interview. The first question asked whether someone is employed full-time, part-time, less than part-time or not at all. The second question asked whether someone is self-employed or not and contained the category "Helping family member". The third question asked for the reason for not being employed. In addition to the categories above it contained the items "Military/civil service", "Temporarily unfit for work", "Pregnancy vacation" and "Does not feel like working". They were all coded to 10 "Other not in labor force".

People working by the time of the telephone interview but not by the time of the written questionnaire (or the other way round) receive code 0 "Not available".

	Total	1371	54.4		
Total		2518	100.0		

Variable SPISCO88 was generated analogous to variable ISCO88. Exception: Code 0 additionally contains cases where the respondent does not live with a spouse or partner (Code 2 or 9 on COHAB).

WRKGOVT R: Working for private - public sector

		Fre	Pct	Val Pct	Cum Pct
Valid	1 Government	126	5.0	8.3	8.3
	3 Private firm	1393	55.3	91.7	100.0
	Total	1519	60.3	100.0	
Missing	0 NAP NAV	749	29.7		
-	8 Self employed	234	9.3		
	9 NA, don't know	16	.6		
	Total	999	39.7		
Total		2518	100.0		

Variable WRKGOVT contains no information about people working for publicly owned firms – it only distinguishes between working for the government or not. The original question was asked during the telephone interview.

SELFEMP R: Self-employed I

		Fre	Pct	Val Pct	Cum Pct
Valid	1 Self-employed	234	9.3	13.3	13.3
	2 Work f someone else	1530	60.8	86.7	100.0
	Total	1764	70.1	100.0	
Missing	0 NAV;Unempl,n lab force	749	29.7		
	9 NA, refused	5	.2		
	Total	754	29.9		
Total		2518	100.0		

Variable SELFEMP was part of the telephone interview. It originally consisted of more detailed categories. People helping in a family member's business are coded to "selfemployed".

NEMPLOY R: Self-employed II - how many employ

		⊢re	Pct	Val Pct	Cum Pct
Valid	1 1 employee	35	1.4	23.6	23.6
	2	37	1.5	25.0	48.6
	3	21	.8	14.2	62.8
	4	8	.3	5.4	68.2
	5	12	.5	8.1	76.4
	6	3	.1	2.0	78.4
	7	5	.2	3.4	81.8
	8	1	.0	.7	82.4
	9 9 employees	3	.1	2.0	84.5
	14 10-18 employees	5	.2	3.4	87.8
	34 19-48 employees	10	.4	6.8	94.6
	74 49-98 employees	1	.0	.7	95.3
	99 99 and more employees	7	.3	4.7	100.0
	Total	148	5.9	100.0	
Missing	0 NAV;NAP	2284	90.7		
-	9995 No employee	84	3.3		
	9999 NA	2	.1		
	Total	2370	94.1		
Total		2518	100.0		

Variable NEMPLOY was part of the telephone interview. In cases with more than 9 employees only classified data is available (the classes labeled above have odd ranges because originally the number of employees including the own person was investigated). The variable contains the class-midpoints.

Variable RINCOME displays the monthly net income of each respondent in Swiss francs. "Net income" means income *after* deduction of social security insurance contributions (approximately 12%) but *before* payment of income taxes. Variable RINCOME includes earnings like wages, pensions or unemployment and other benefits (but no earnings from interests or rent).

If someone preferred telling the gross income or yearly/hourly earnings the quotation was subsequently transformed to monthly net income (net income = gross income * 0.88; monthly income = yearly income / 13; monthly income = hourly income * WRKHRS * 4.34).

Some of the foreign respondents declared their income *after* deduction of withholding tax. This was also taken into account.

If someone refused to declare or did not know the income a second question containing classified categories was asked. In these cases the class-midpoints are saved.

The original wording of the questions in German is: "Darf ich Sie fragen, wie hoch Ihr persönliches monatliches Nettoeinkommen ist, also die Summe, die Ihnen nach Abzug der Sozialversicherungsbeiträge (AHV etc.) aber vor Abzug der Steuern übrig bleibt?' INT.: Wir wollen wissen, welcher Betrag monatlich auf dem Gehaltskonto erscheint! Gemeint sind alle Einkünfte aus Erwerbsarbeit, Renten, Pensionen, Arbeitslosengelder, Stipendien oder sonstige Unterstützungen zusammen (jedoch keine Kapitaleinkünfte). Das Nettoeinkommen von Ausländern bemisst sich nach Abzug der Quellensteuer" and "Int.: Bitte darauf hinweisen, dass diese Frage ausserordentlich wichtig ist und nachfragen: 'Wären Sie bereit, mir zu sagen, wie hoch Ihr monatliches Nettoeinkommen ungefähr ist?'"

Variable INCOME displays the monthly net income of all household members together. It is generated analogous to variable RINCOME.

The original German wording of the questions is: "Können Sie mir sagen, wie hoch das monatliche Nettoeinkommen aller Haushaltsmitglieder zusammen ist inklusive Sie selber, also die Summe, die Ihnen nach Abzug der Sozialversicherungsbeiträge (AHV etc.) aber vor Abzug der Steuern übrig bleibt?" and "Int.: Bitte darauf hinweisen, dass diese Frage ausserordentlich wichtig ist und nachfragen: 'Wären Sie bereit, mir zu sagen, wie hoch das monatliches Nettoeinkommen des Haushalts ungefähr ist?""

RELIG R: Religious denomination

6 Variable List

6.1 1997 ISSP module on "Work orientations"

- V1 Study Number
- Respondent Number V2
- V3 Country
- V4 Time in a paid job
- V5 Time doing household work
- V6 Time with family
- Time with friends V7
- V8 Time in leisure activities
- V9 Job a way for earning money
- A paid job even I did not need the money V10
- Work is persons most important activity V11
- Person responsible for domestic duties V12
- Importance: job security V13
- V14 Importance: high income
- V15 Importance: good advancement
- V16 Importance: interesting job
- V17 Importance: independently work
- V18 Importance: to help other people
- V19 Importance: useful to society
- V20 Importance: decide their times of work
- Importance: how well to do the job V21
- V22 Importance: family responsibilities
- V23 Importance: education, formal qualif.
- V24 Importance: how long being with the firm
- V25 New technologies - Number of jobs:
- New technologies will make work -V26
- V27 Personally choose between diff. jobs
- I would choose working V28
- V29 I would choose working
- Decide on the present work situation V30

- V31 Easy or difficult to find an accept. job
- Currently working for pay V32
- Best describes feelings about job V33
- Number of hour of work earning money V34
- V35 Apply to the job - my job is secure
- Apply to the job my income is high V36
- V37 Apply - opport. for advancement is high
- V38 Apply to the job - my job is interesting
- V39 Apply to the job - can work independently
- V40 Apply to the job - can help other people
- V41 Apply to the job - is useful to society
- How often applies: home from work exhausted V42
- V43 How often applies: to do hard physical work
- V44 How often applies: find the work stressful
- V45 How often applies: work in dangerous conditions
- V46 Best describes the working hours
- Best describes where you work V47
- V48 Present job situation
- V49 Experience and skills you make use of
- Developing skills: school, college, univ. V50
- Developing skills: training in a job V51
- V52 Relations: between management/employees
- V53 Relations: between workmates/collegues
